

Change location proximity or parking date on entry, otherwise single tap on big button starts service. **This could be bypassed by toggling a setting in your preferences.**

Start Screen options

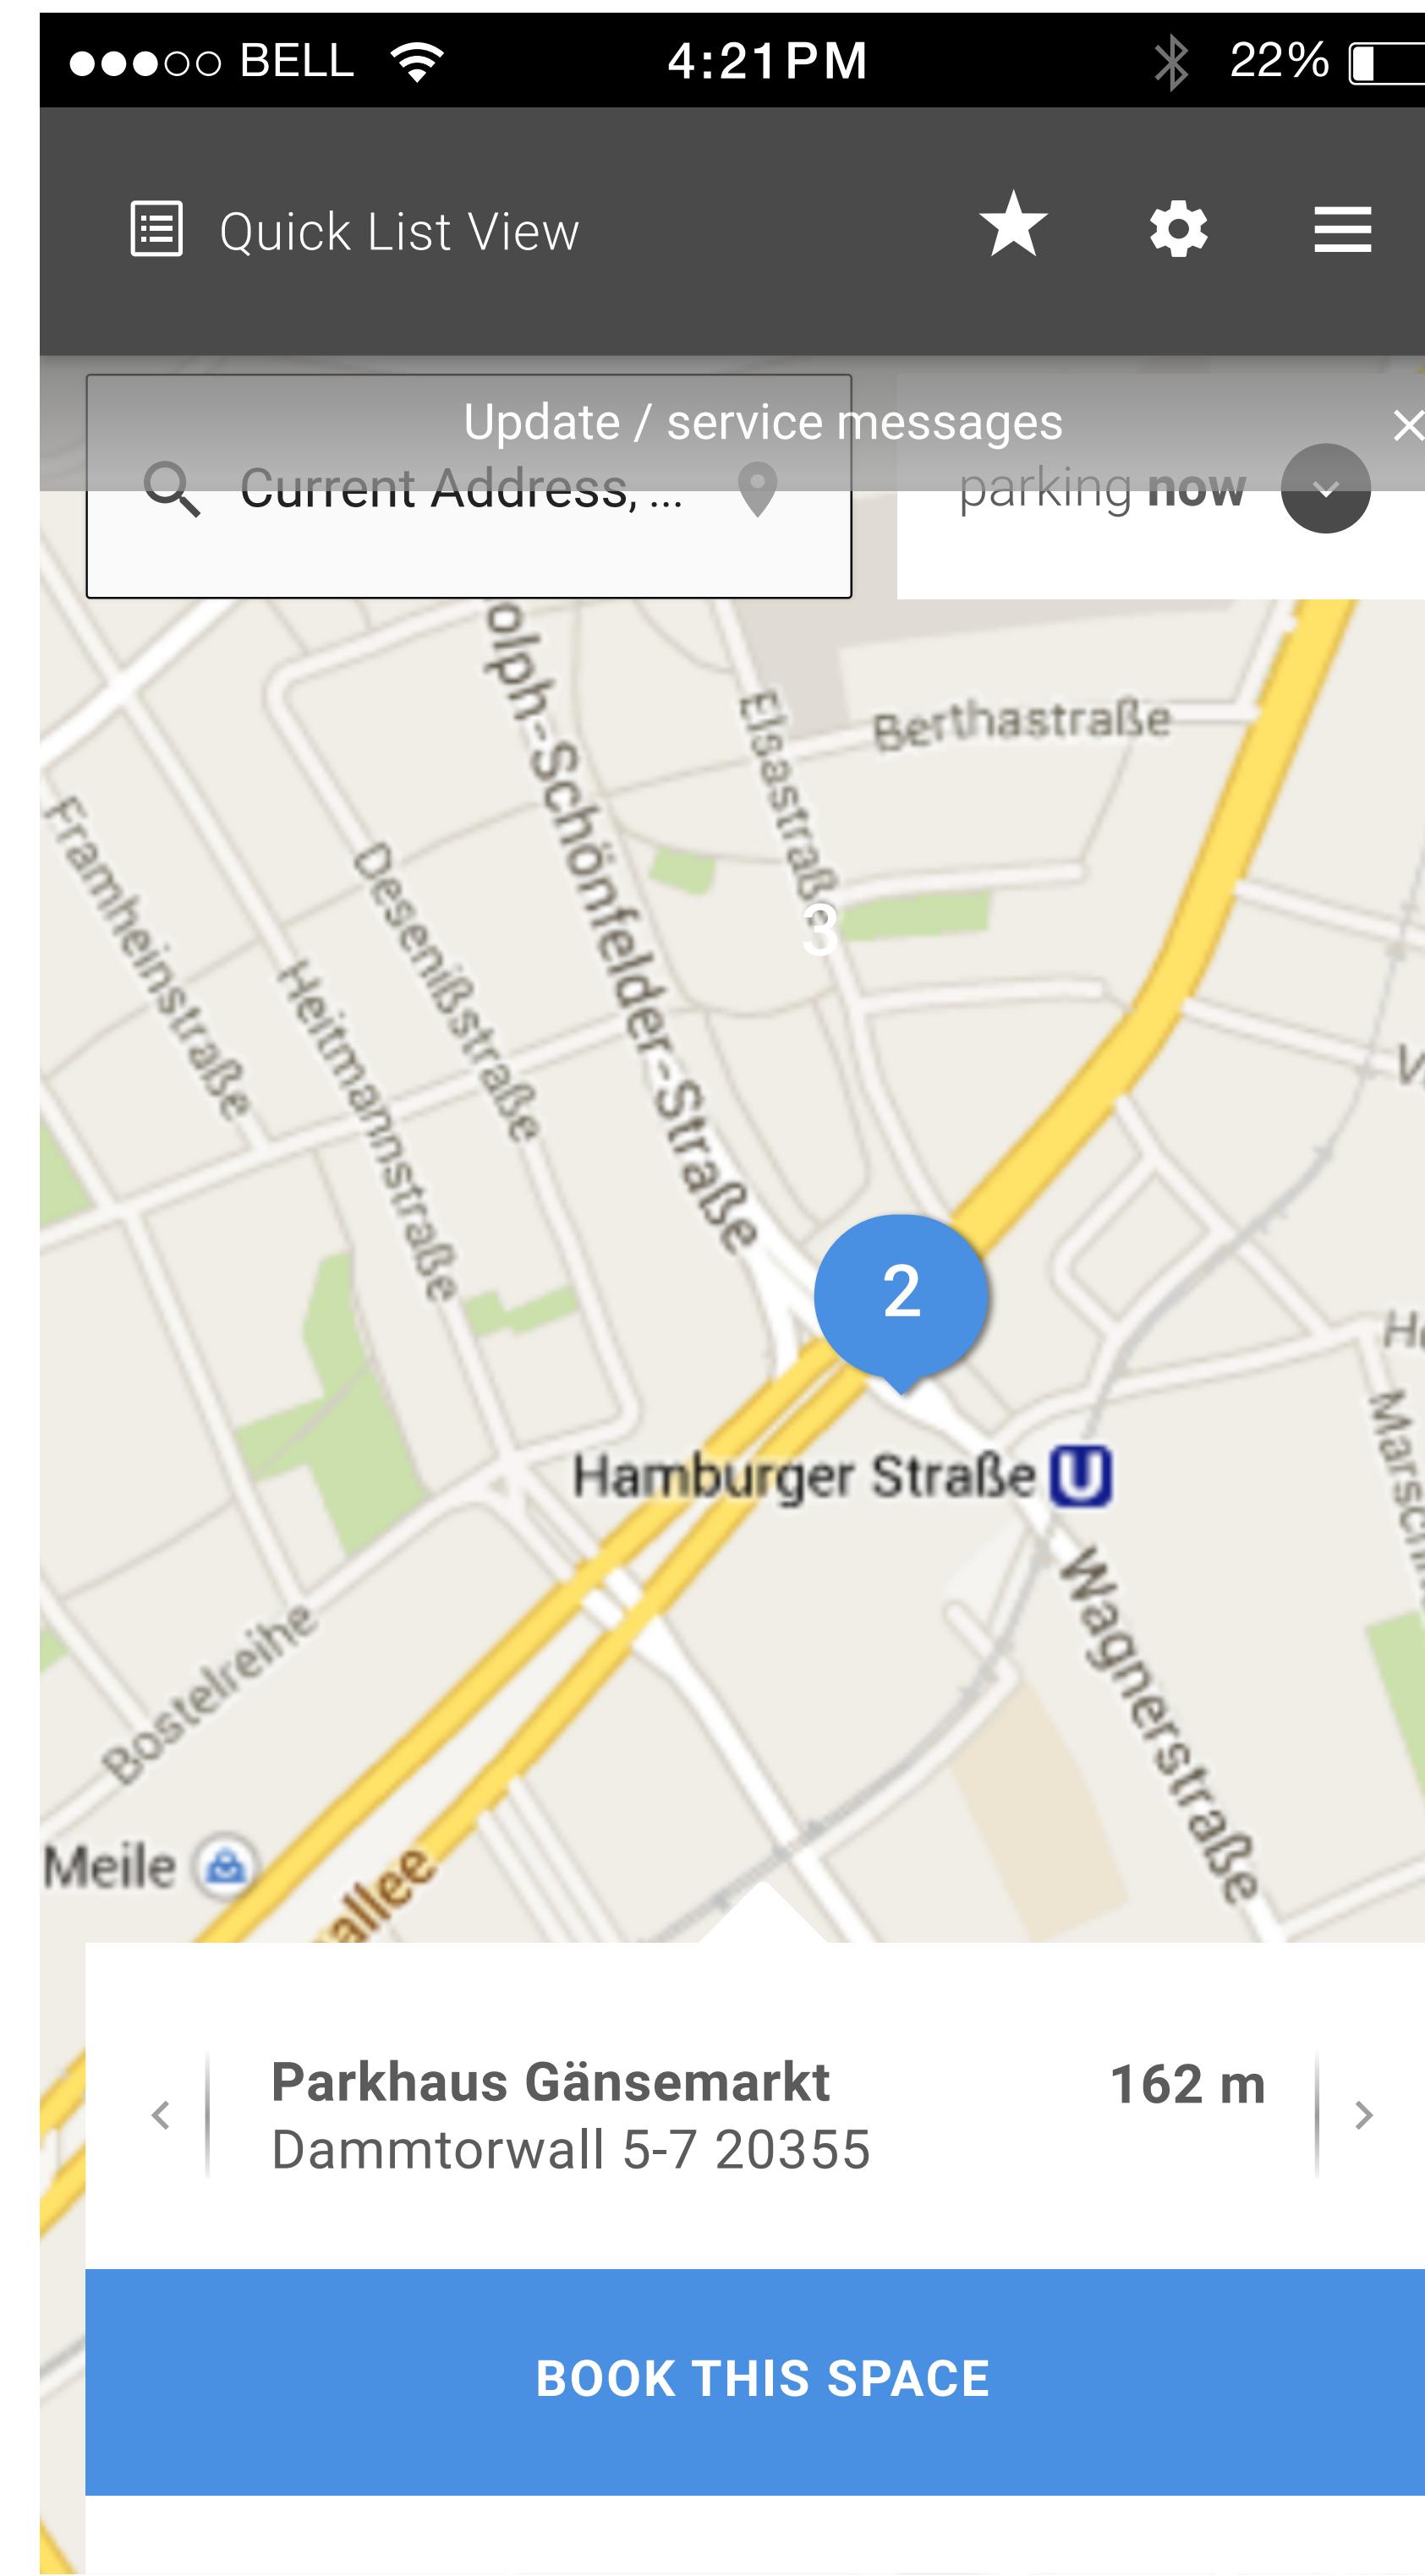

Add one or more spaces to your 'Quickbook' area, allowing single swipe from home screen to activate booking.
If you have spaces favourited, these are also accessible as a full list display from the top menu bar.

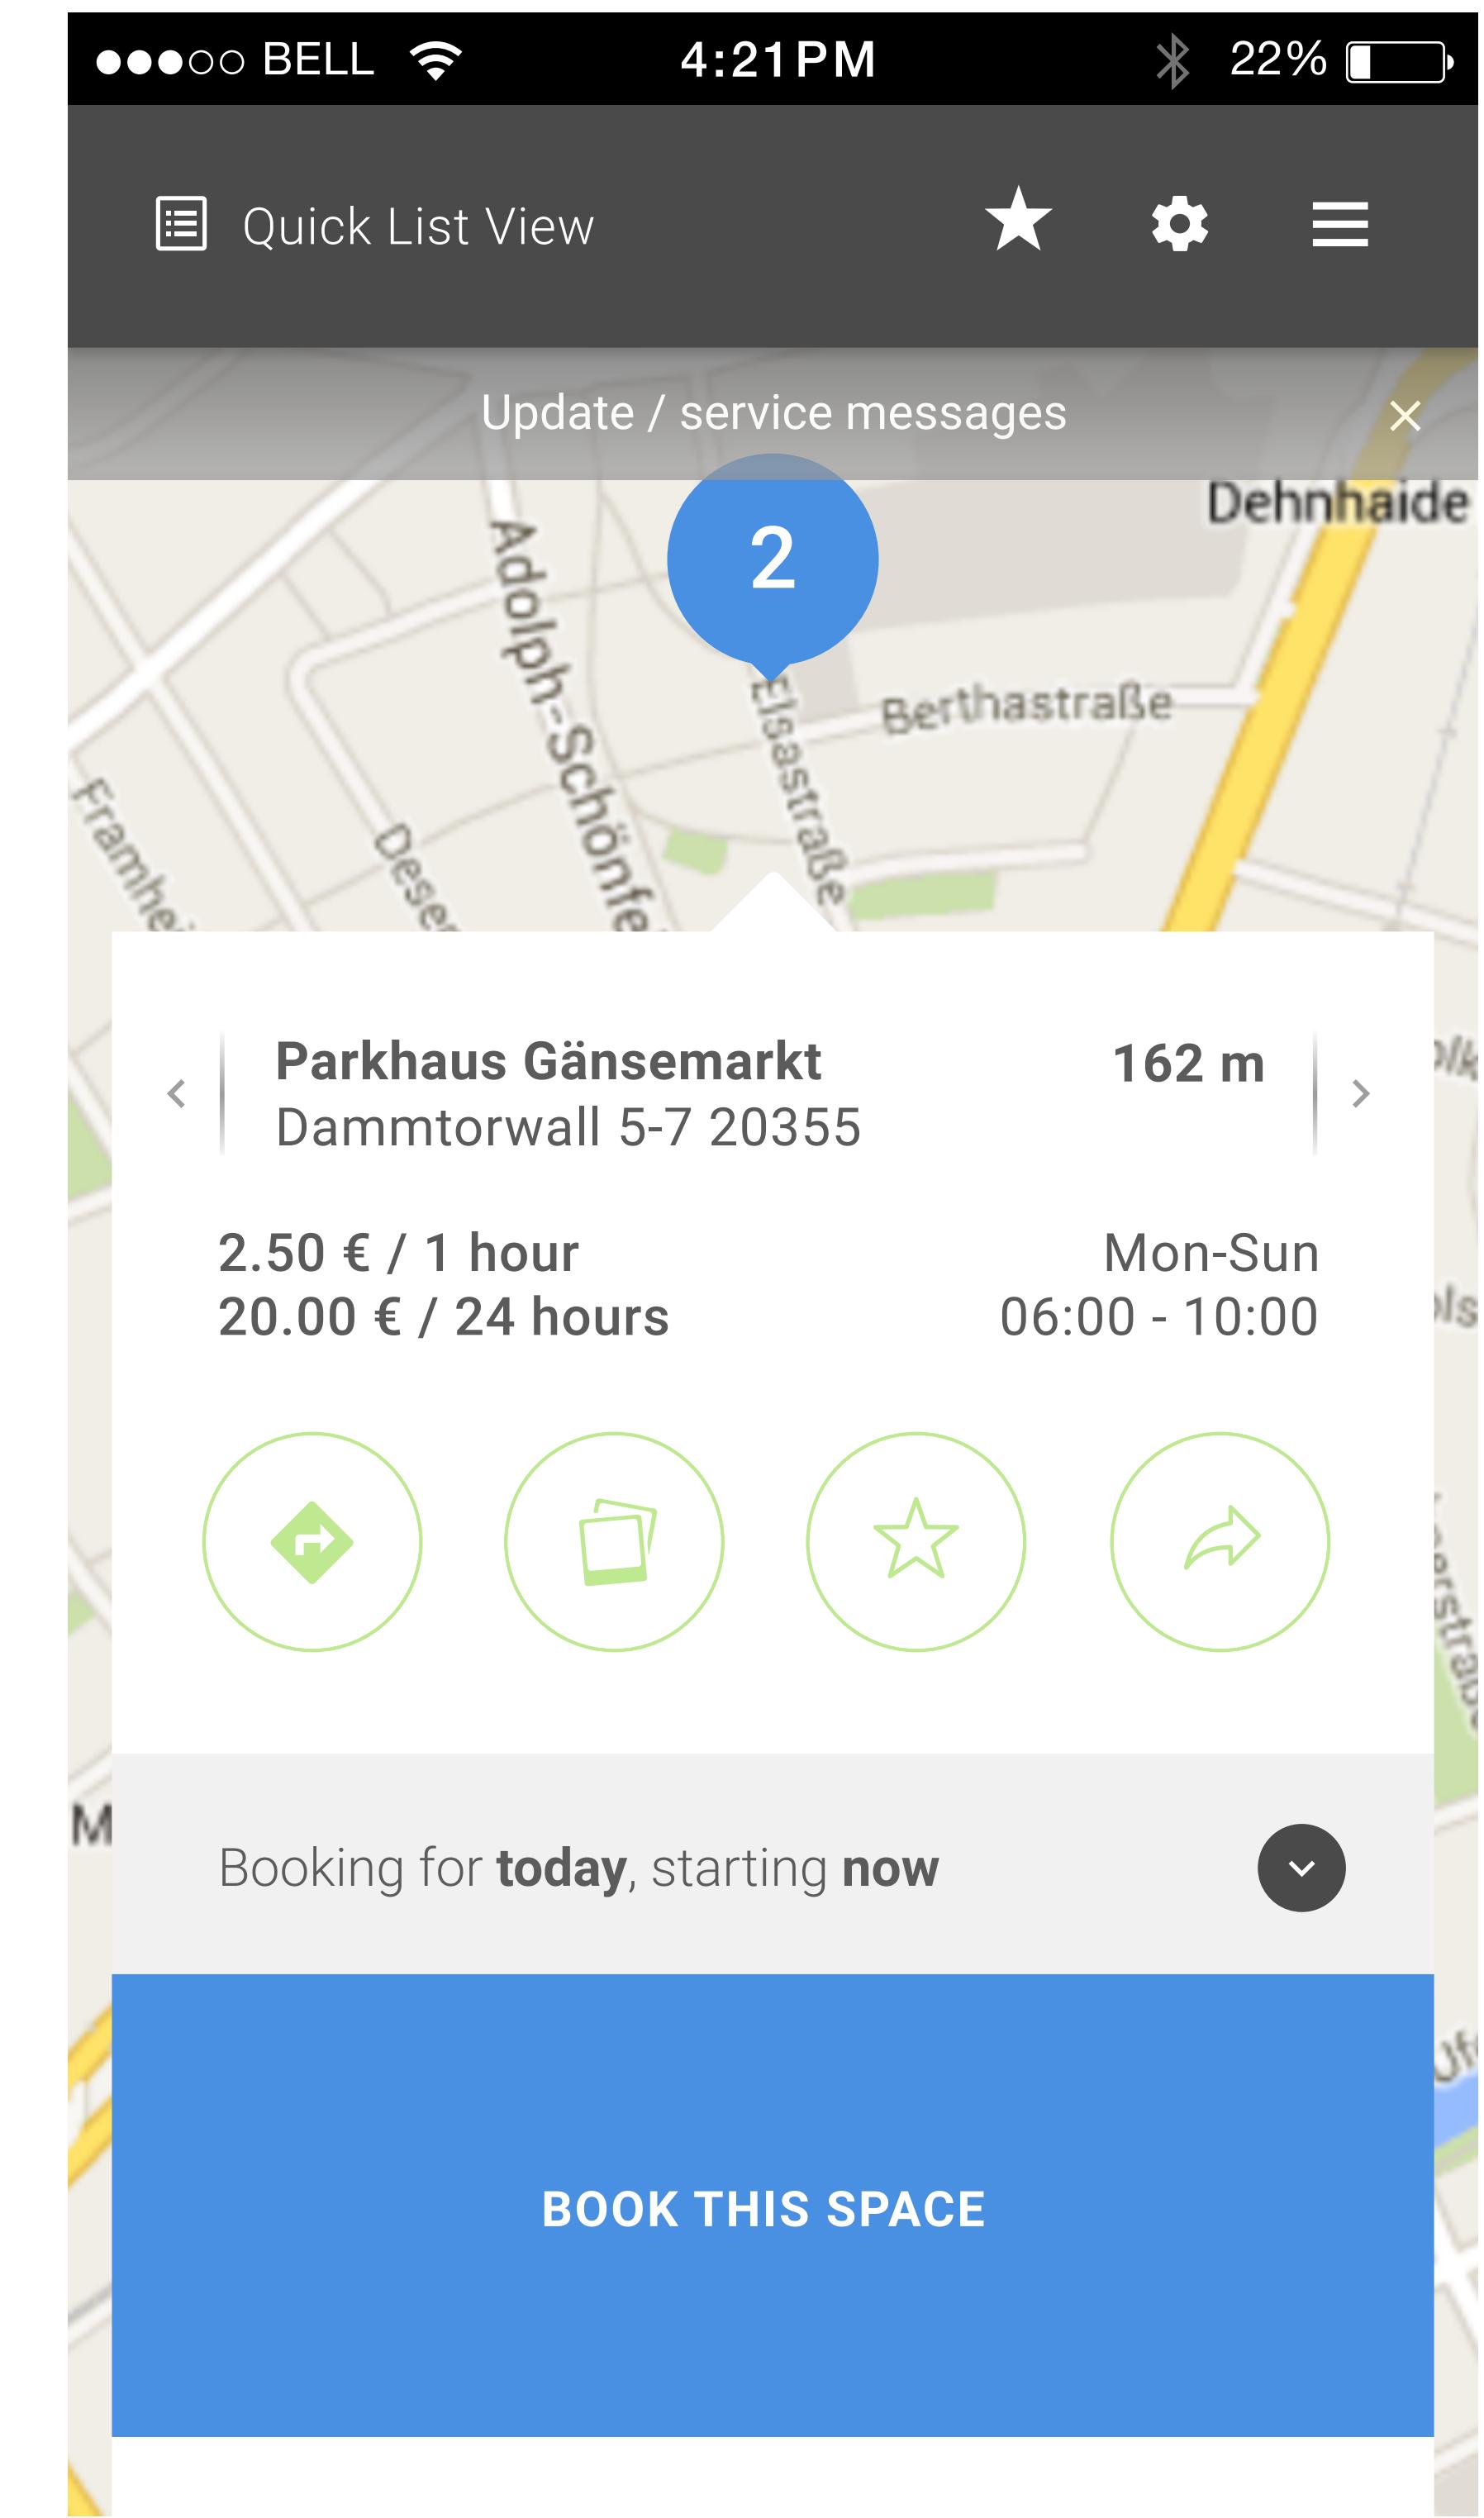

Map view automatically scales to show closest 5-10 in the vicinity of the given location. Presumption is that a suitable parking space would be available from these results.

Map search view

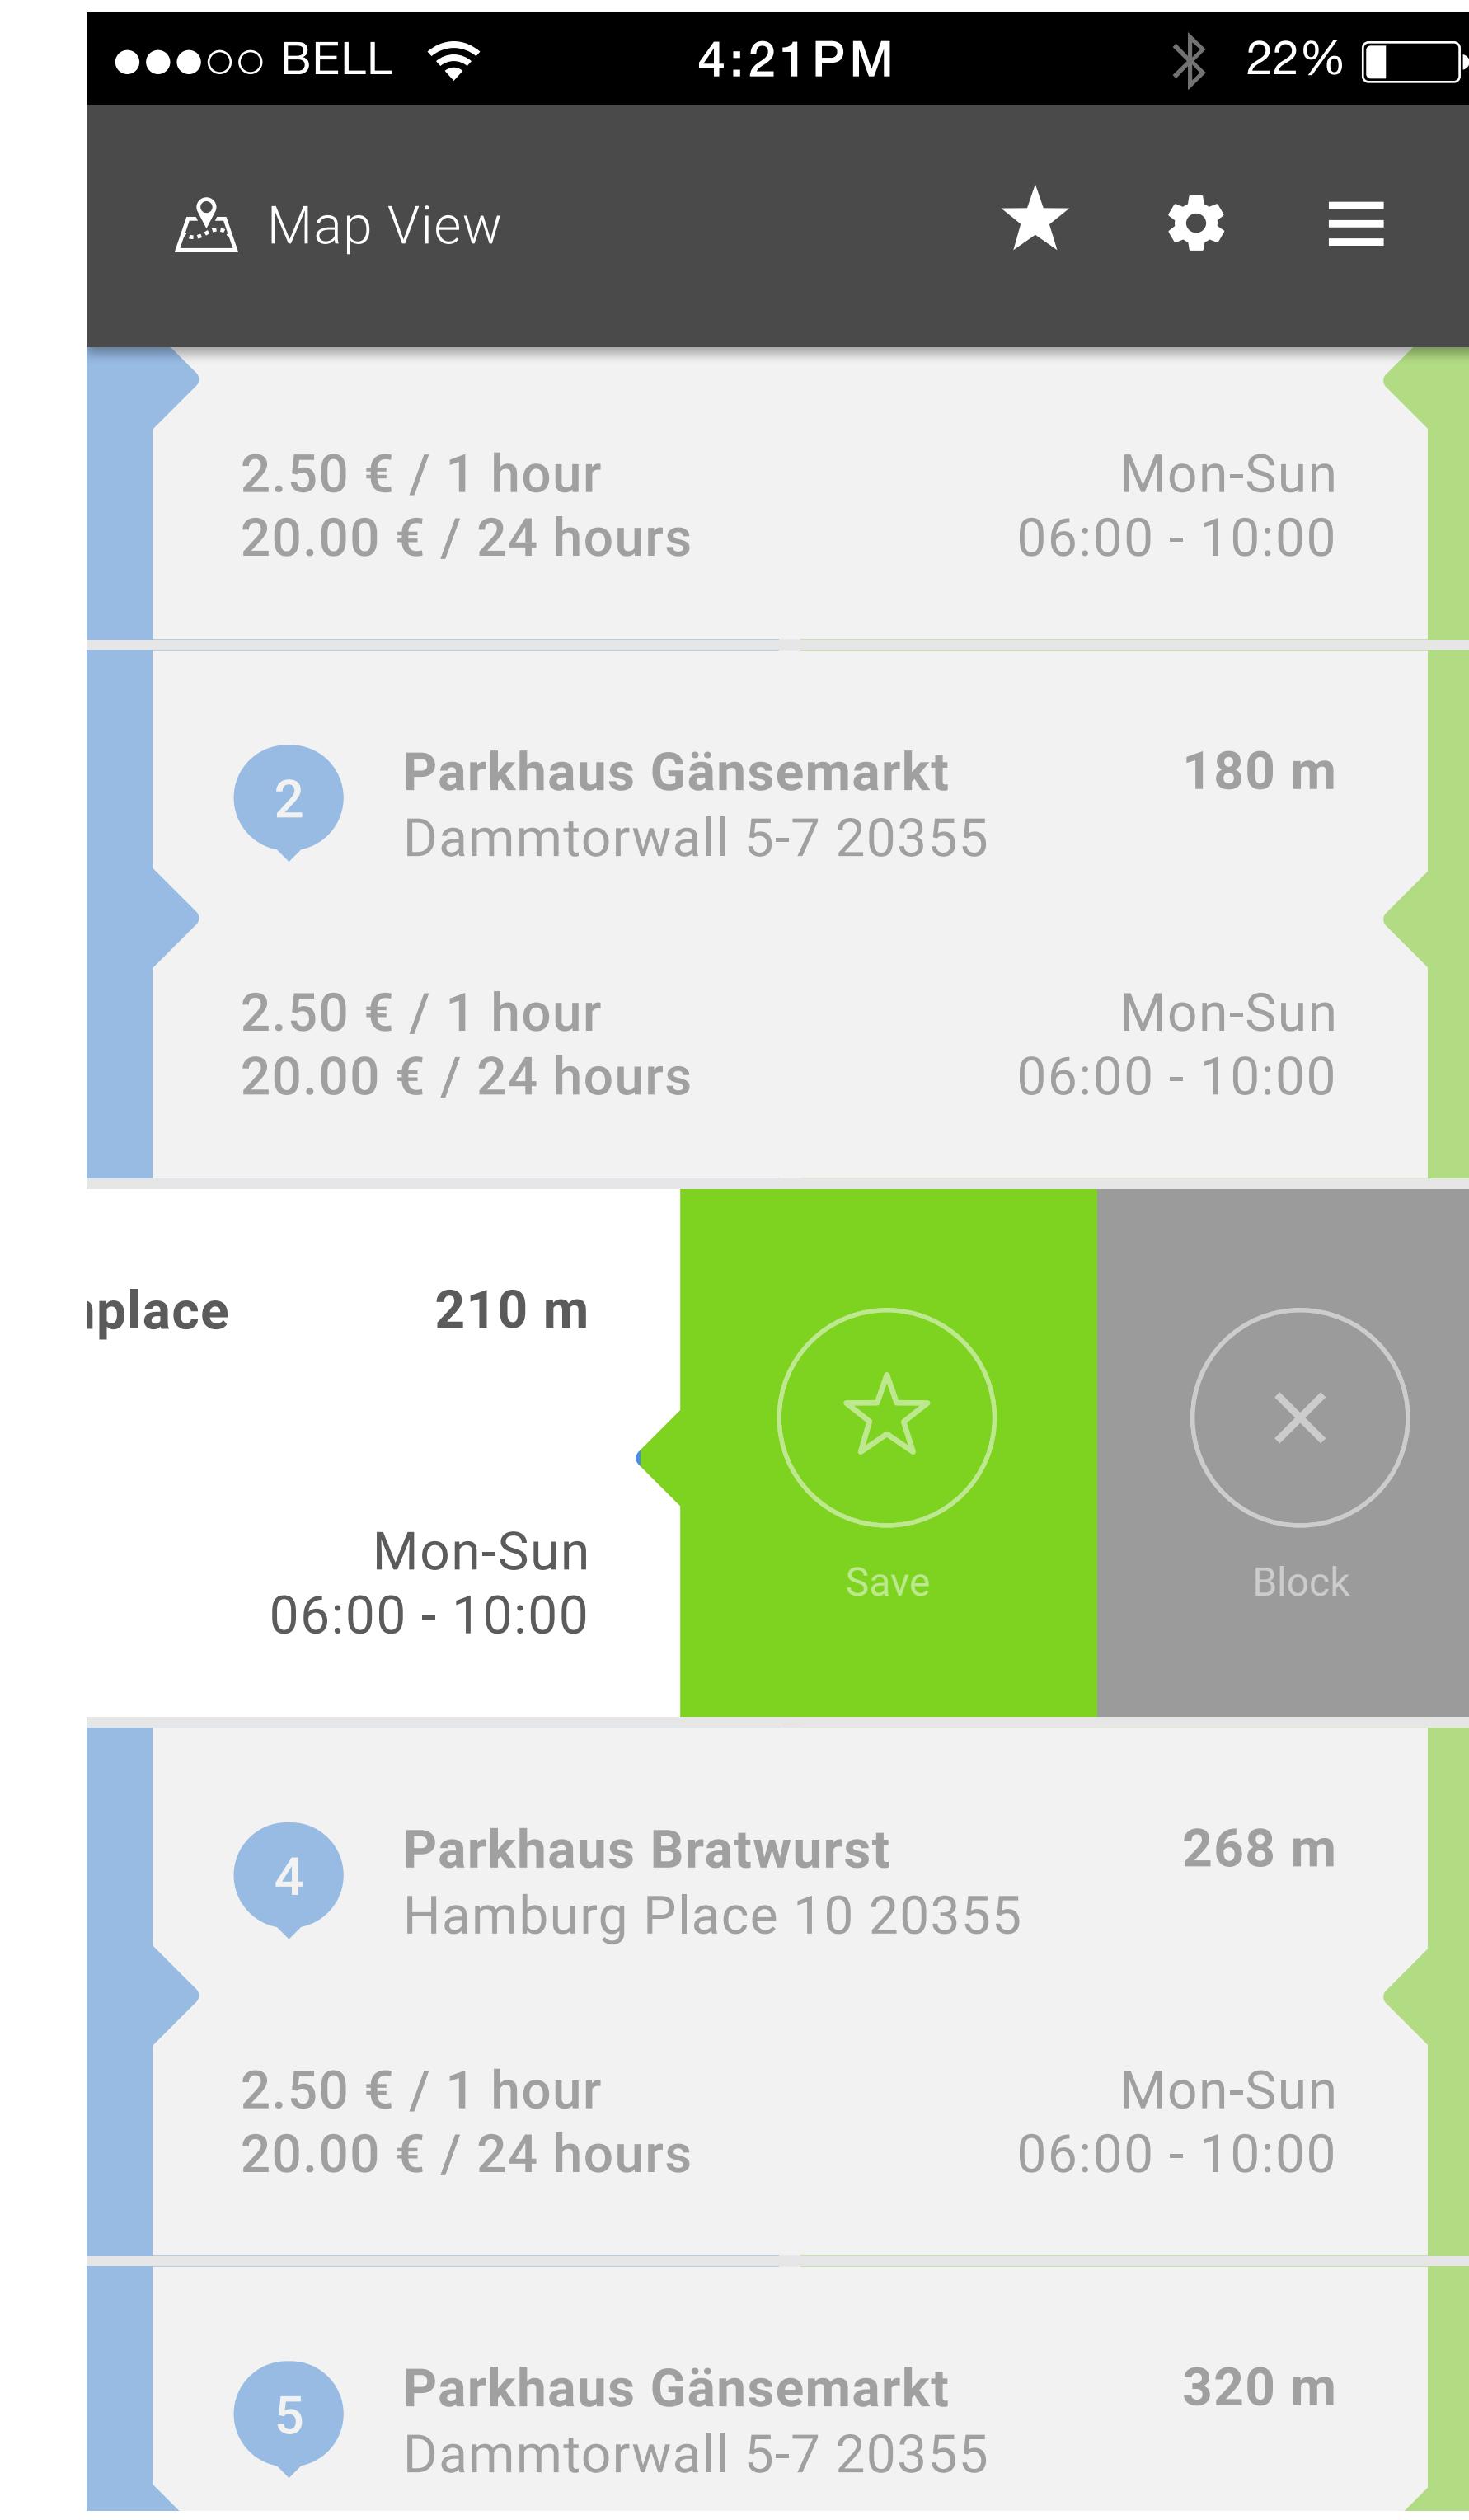

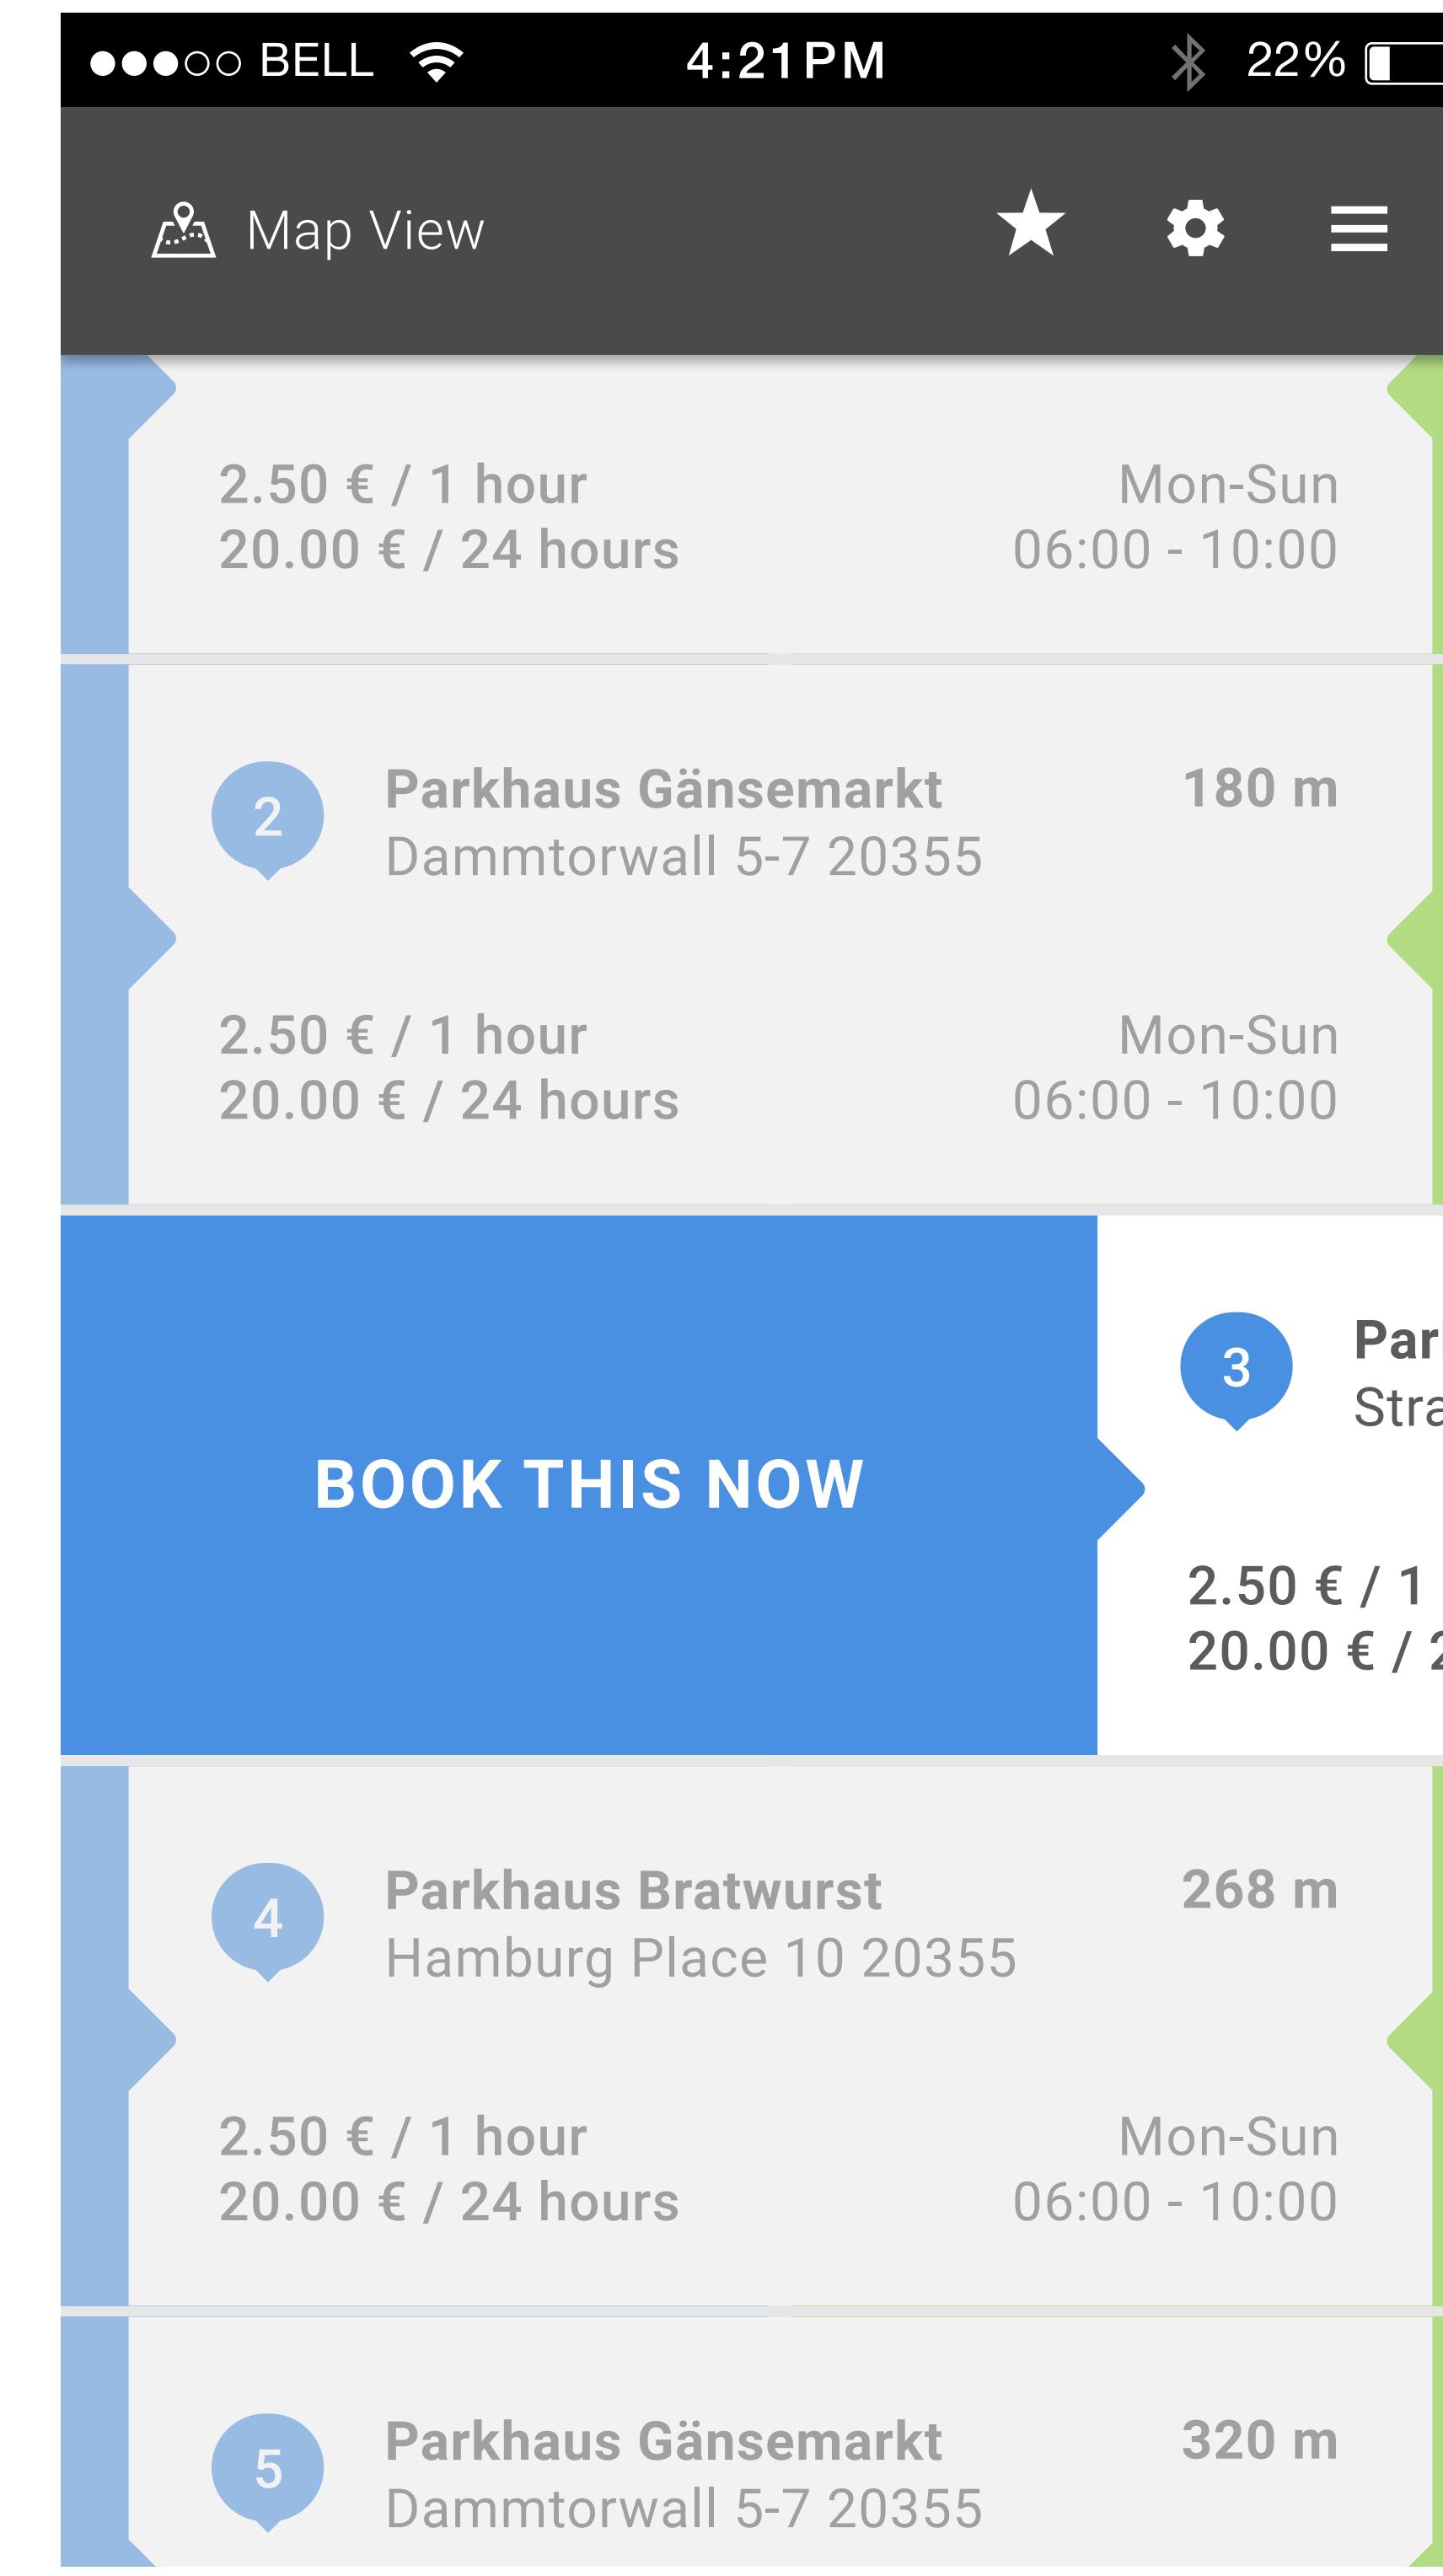

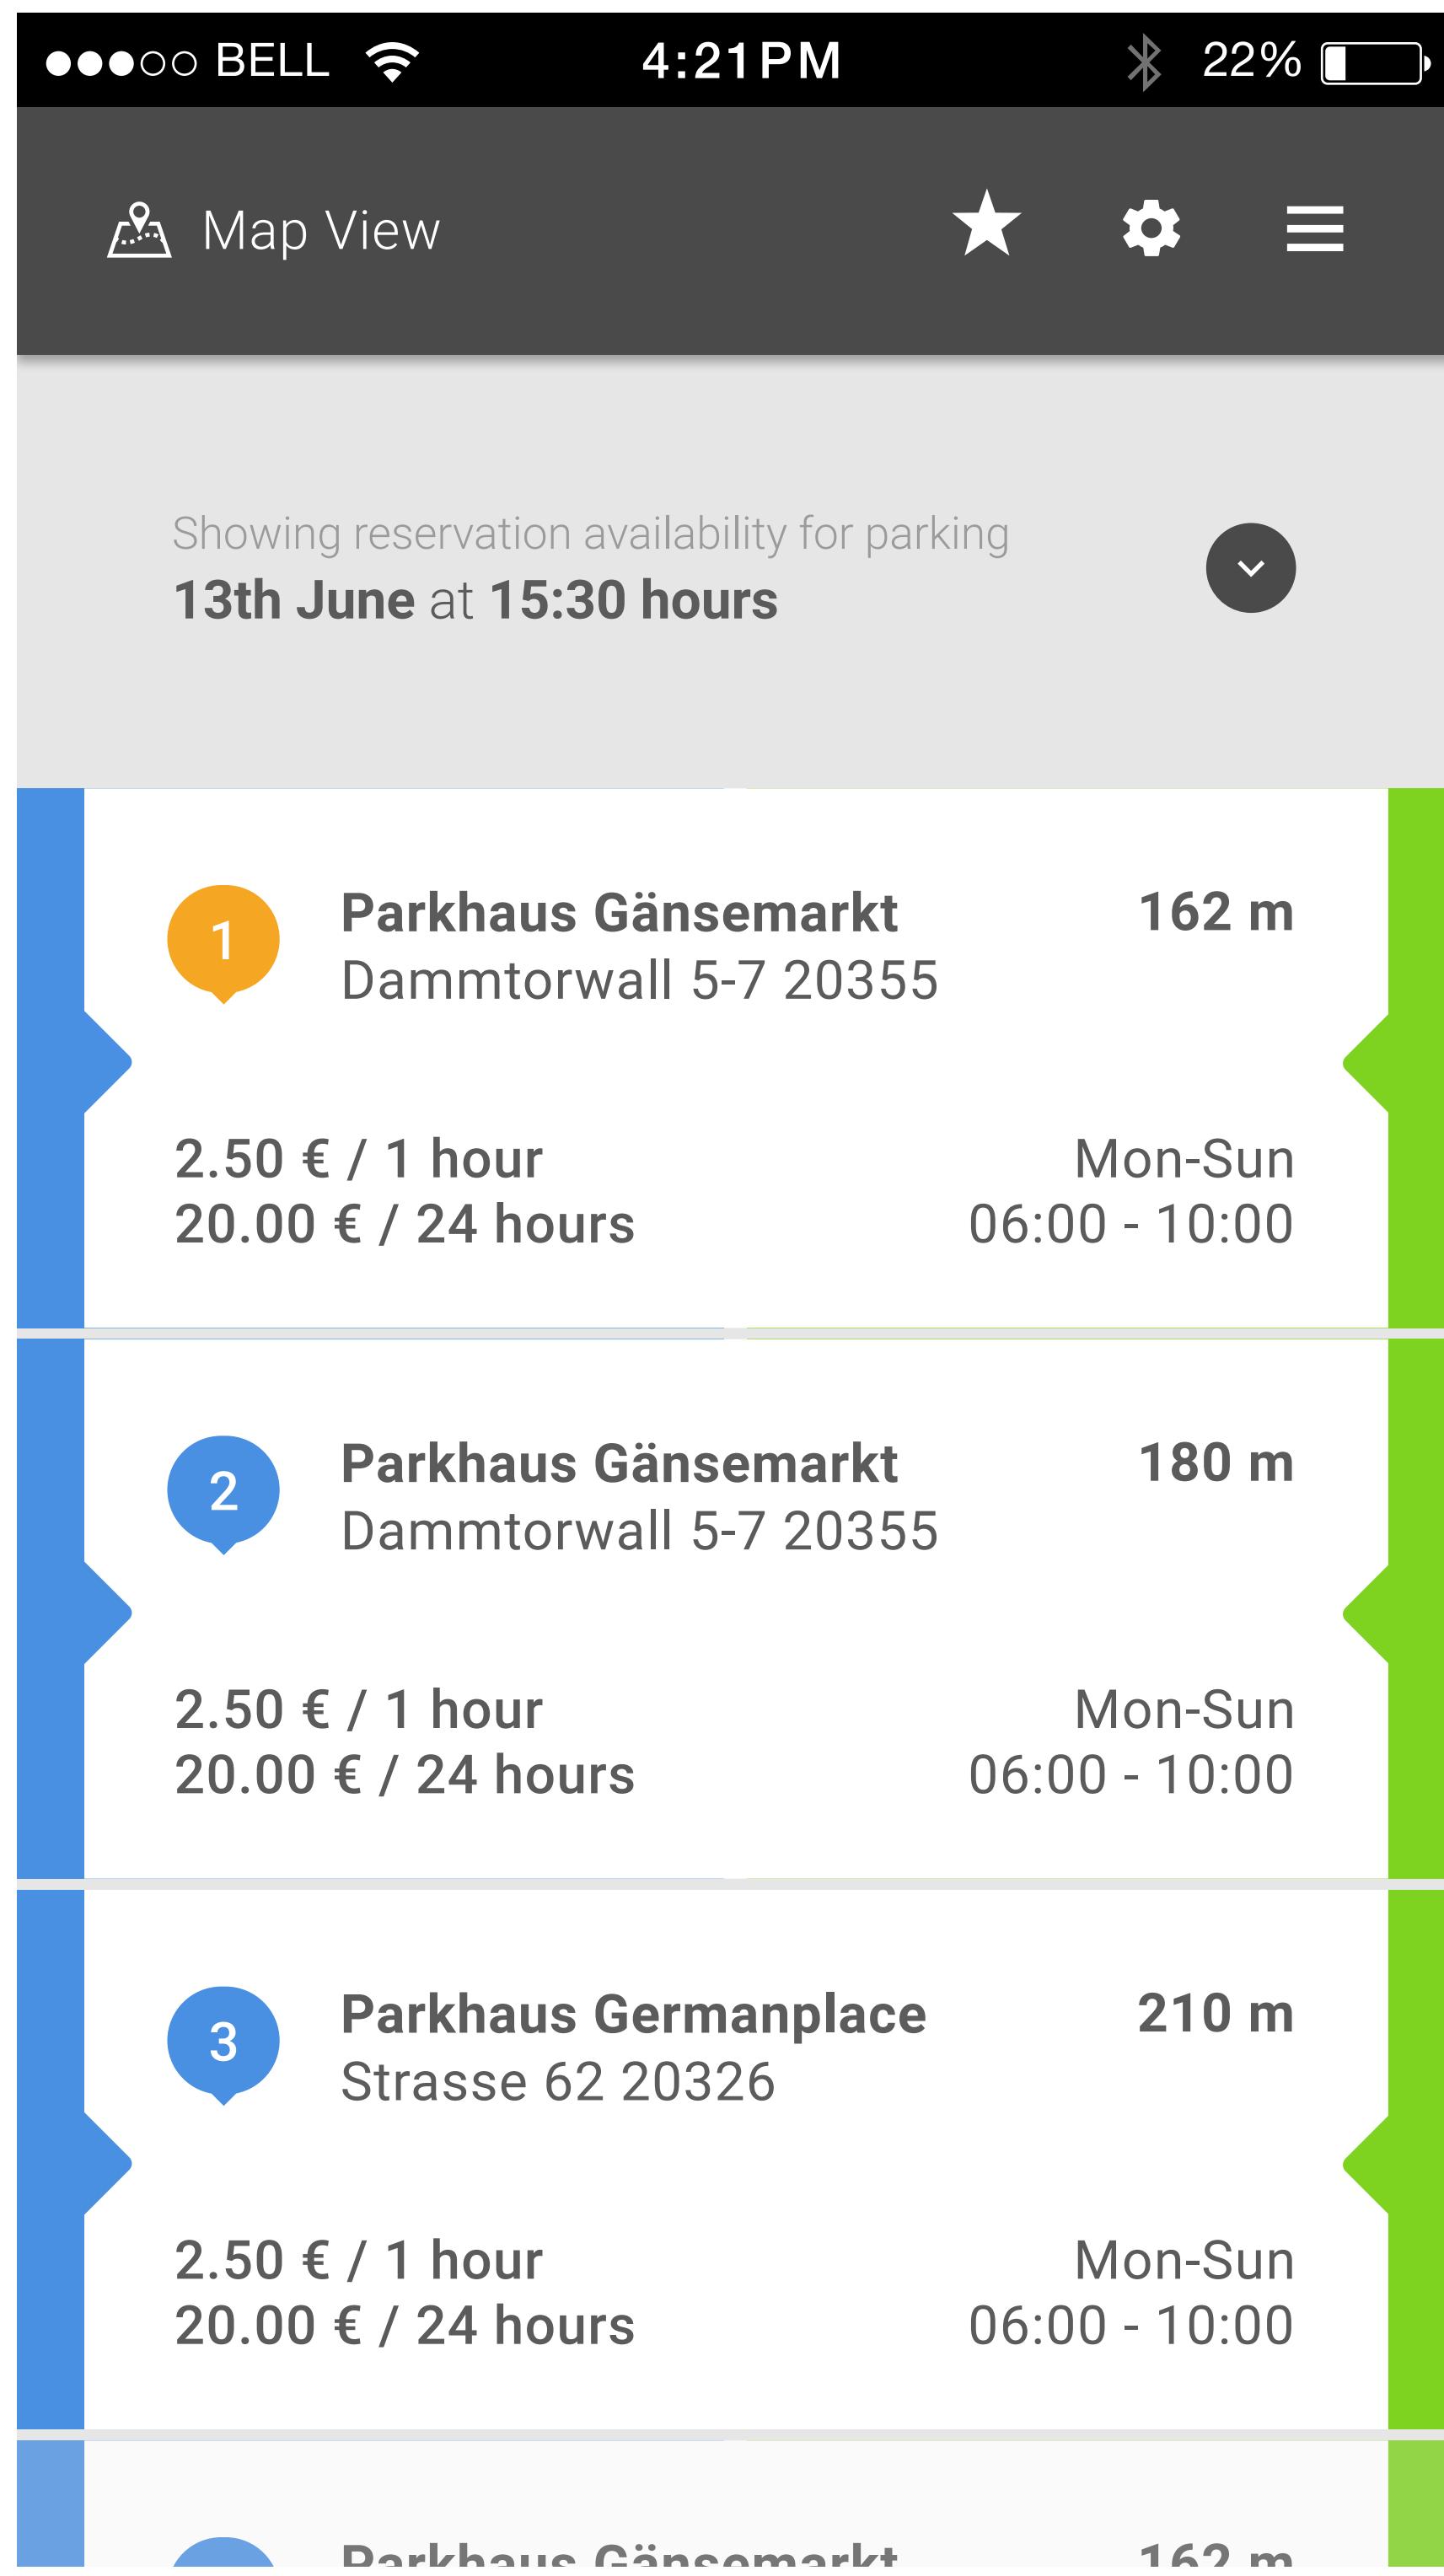

Pinch/zoom the map as normal. If a single space is isolated, then a basic info panel appears on screen.

Either tapping on a space pin in map view, or pulling the white info panel as seen previously, activates a secondary information state.

Large book button and clarification of time for booking. This also gives access should the start time need to be altered.

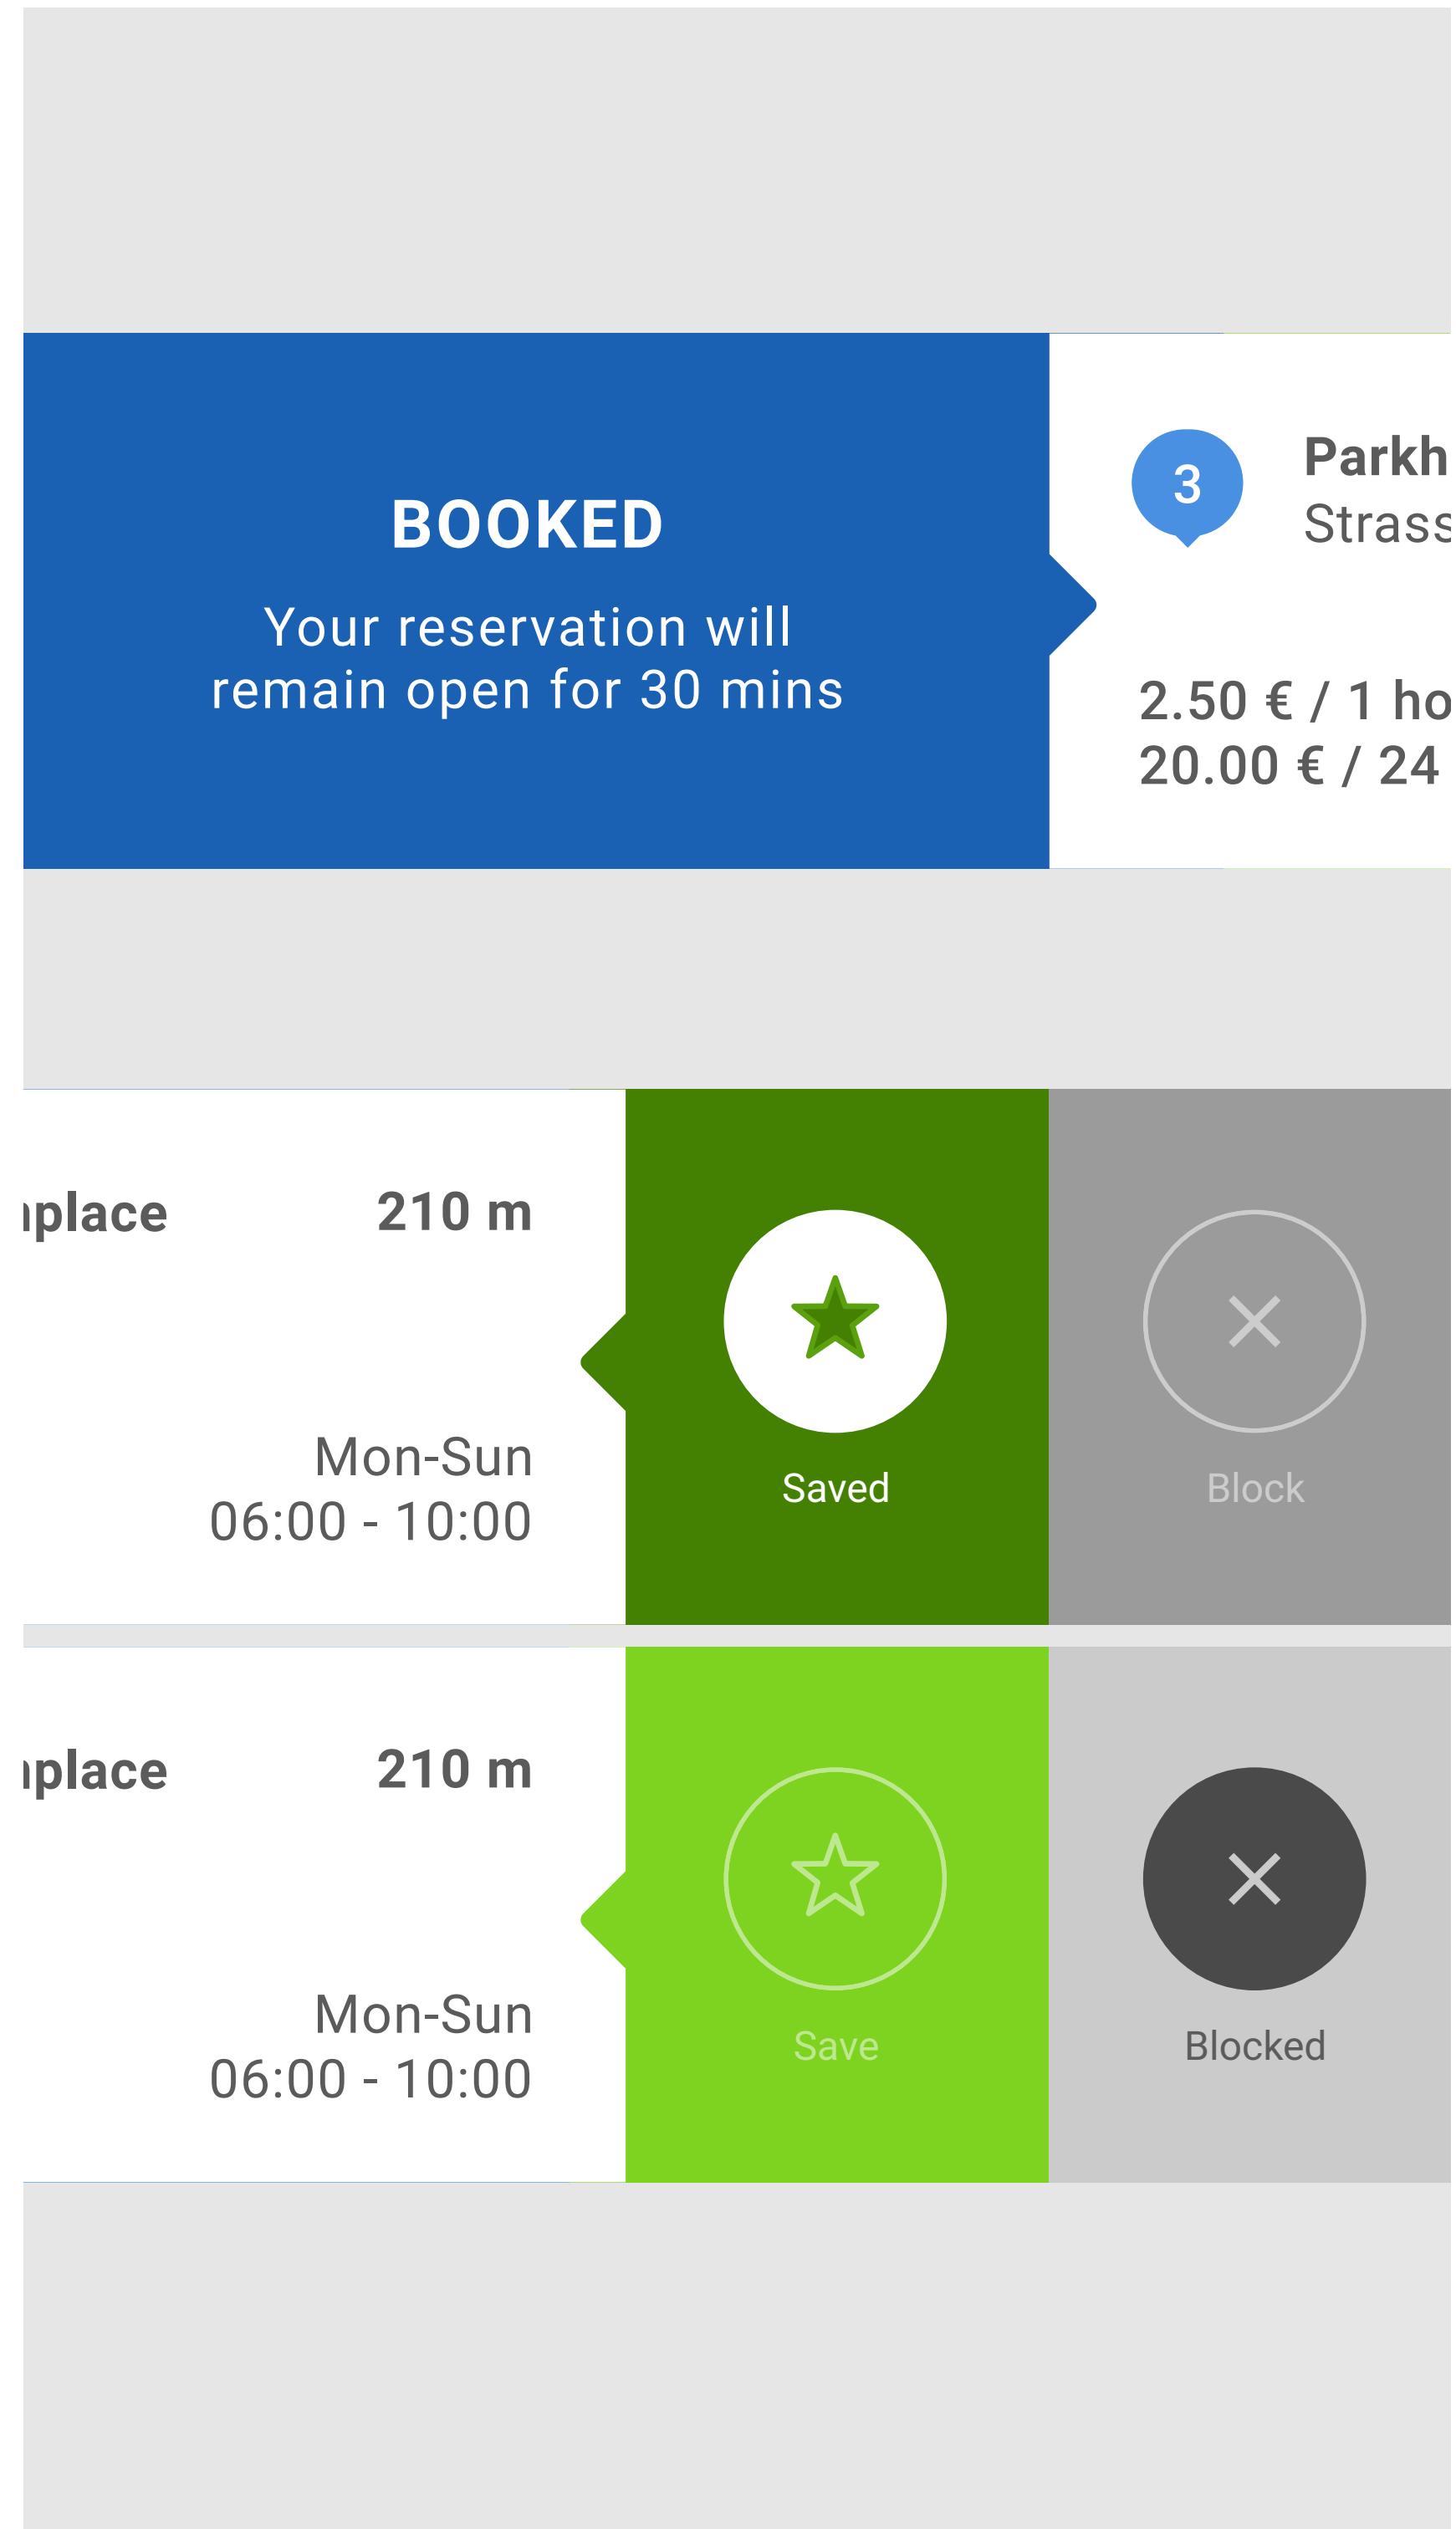

Quick List view allows access to booking and other actions in a much more simplified way. Info cards are kept minimal, with price, time and distance being most important details.

Quick List View and options

Pull tab right to reveal booking.

Pull tab left to reveal further actions.

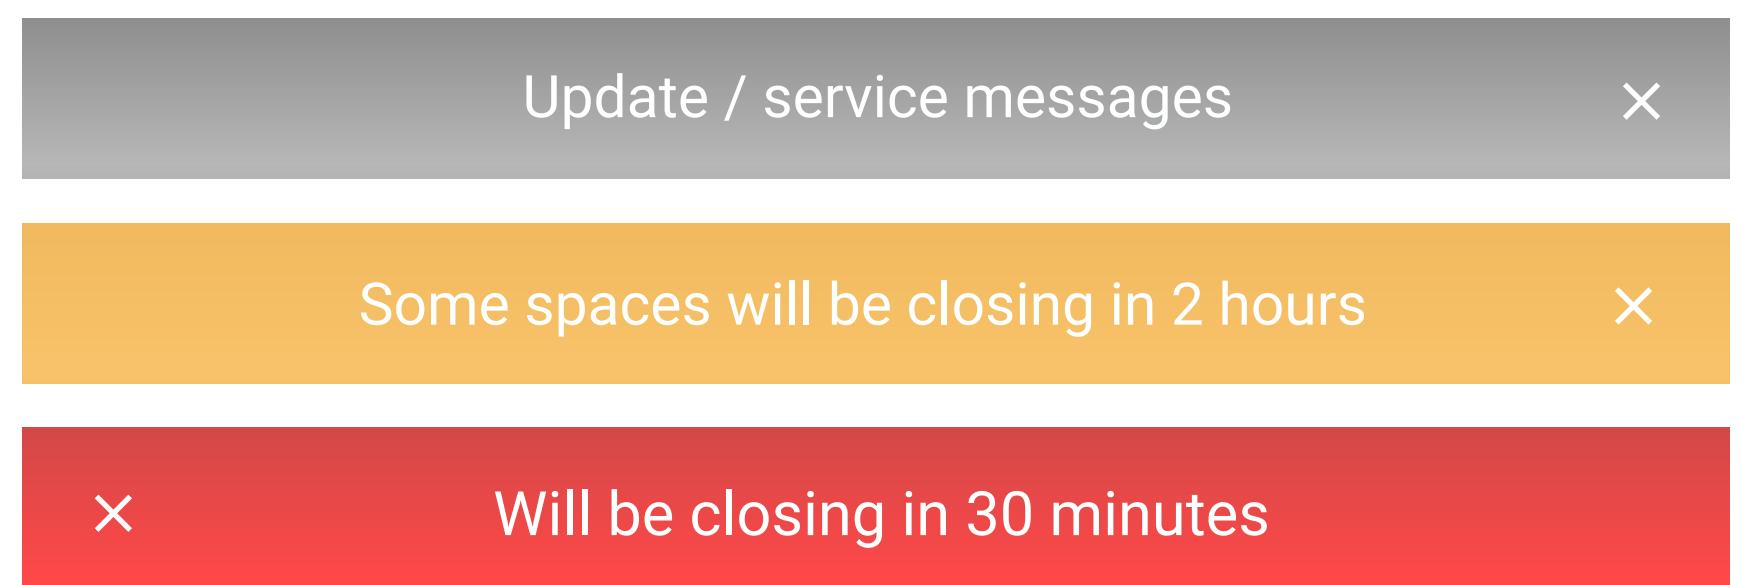

Colour state changes show interaction feedback. Actioned items become darker in colour system.

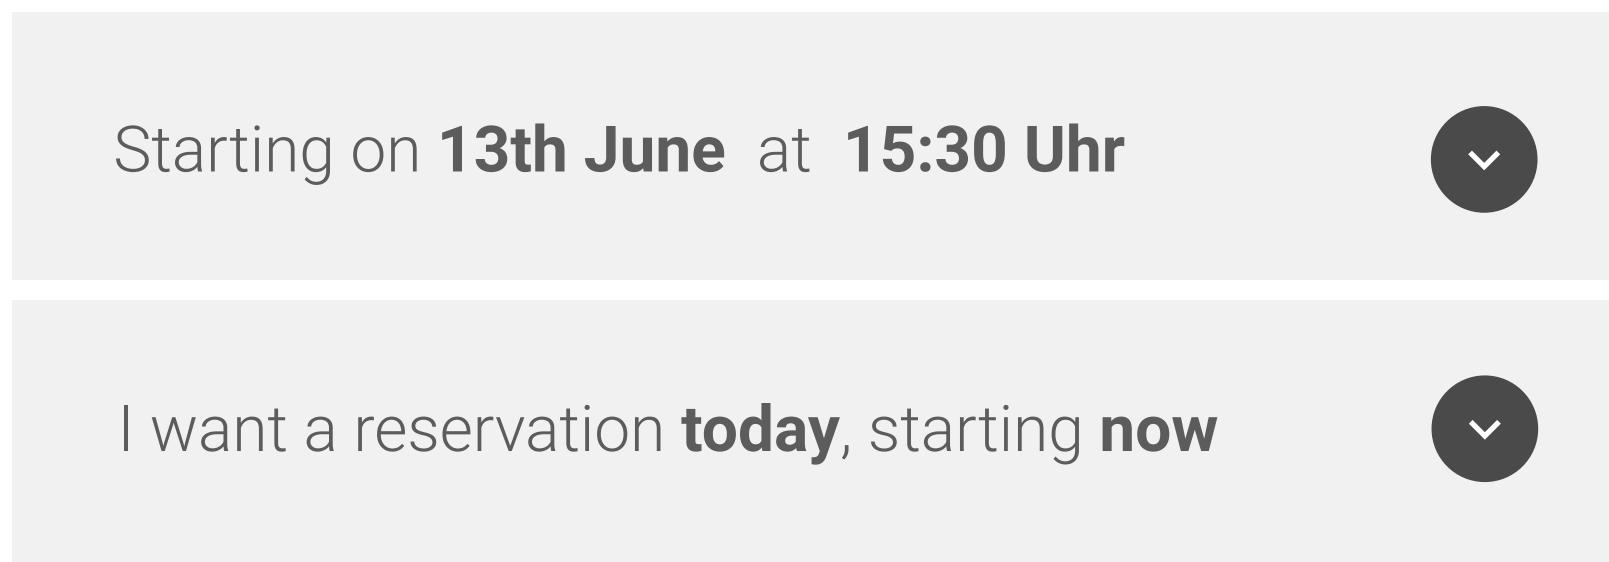

Activation states

Space for all elements in top menu. Quick access links for each reach on right, toggle/back options on left and title space centrally.

Service message updates coloured coded for visibility. Time dependant space information highlighted as red warning.

Natural language time/date indication.

Quick look info;

Name, Street
Distance from location
Pricing
Opening hours

Action area

Most important buttons placed within thumb reach and large enough to be easily tapped from a distance

Non urgent actions (directions, save etc)

Change time/date setting
MAKE BOOKING

BOOK THIS SPACE

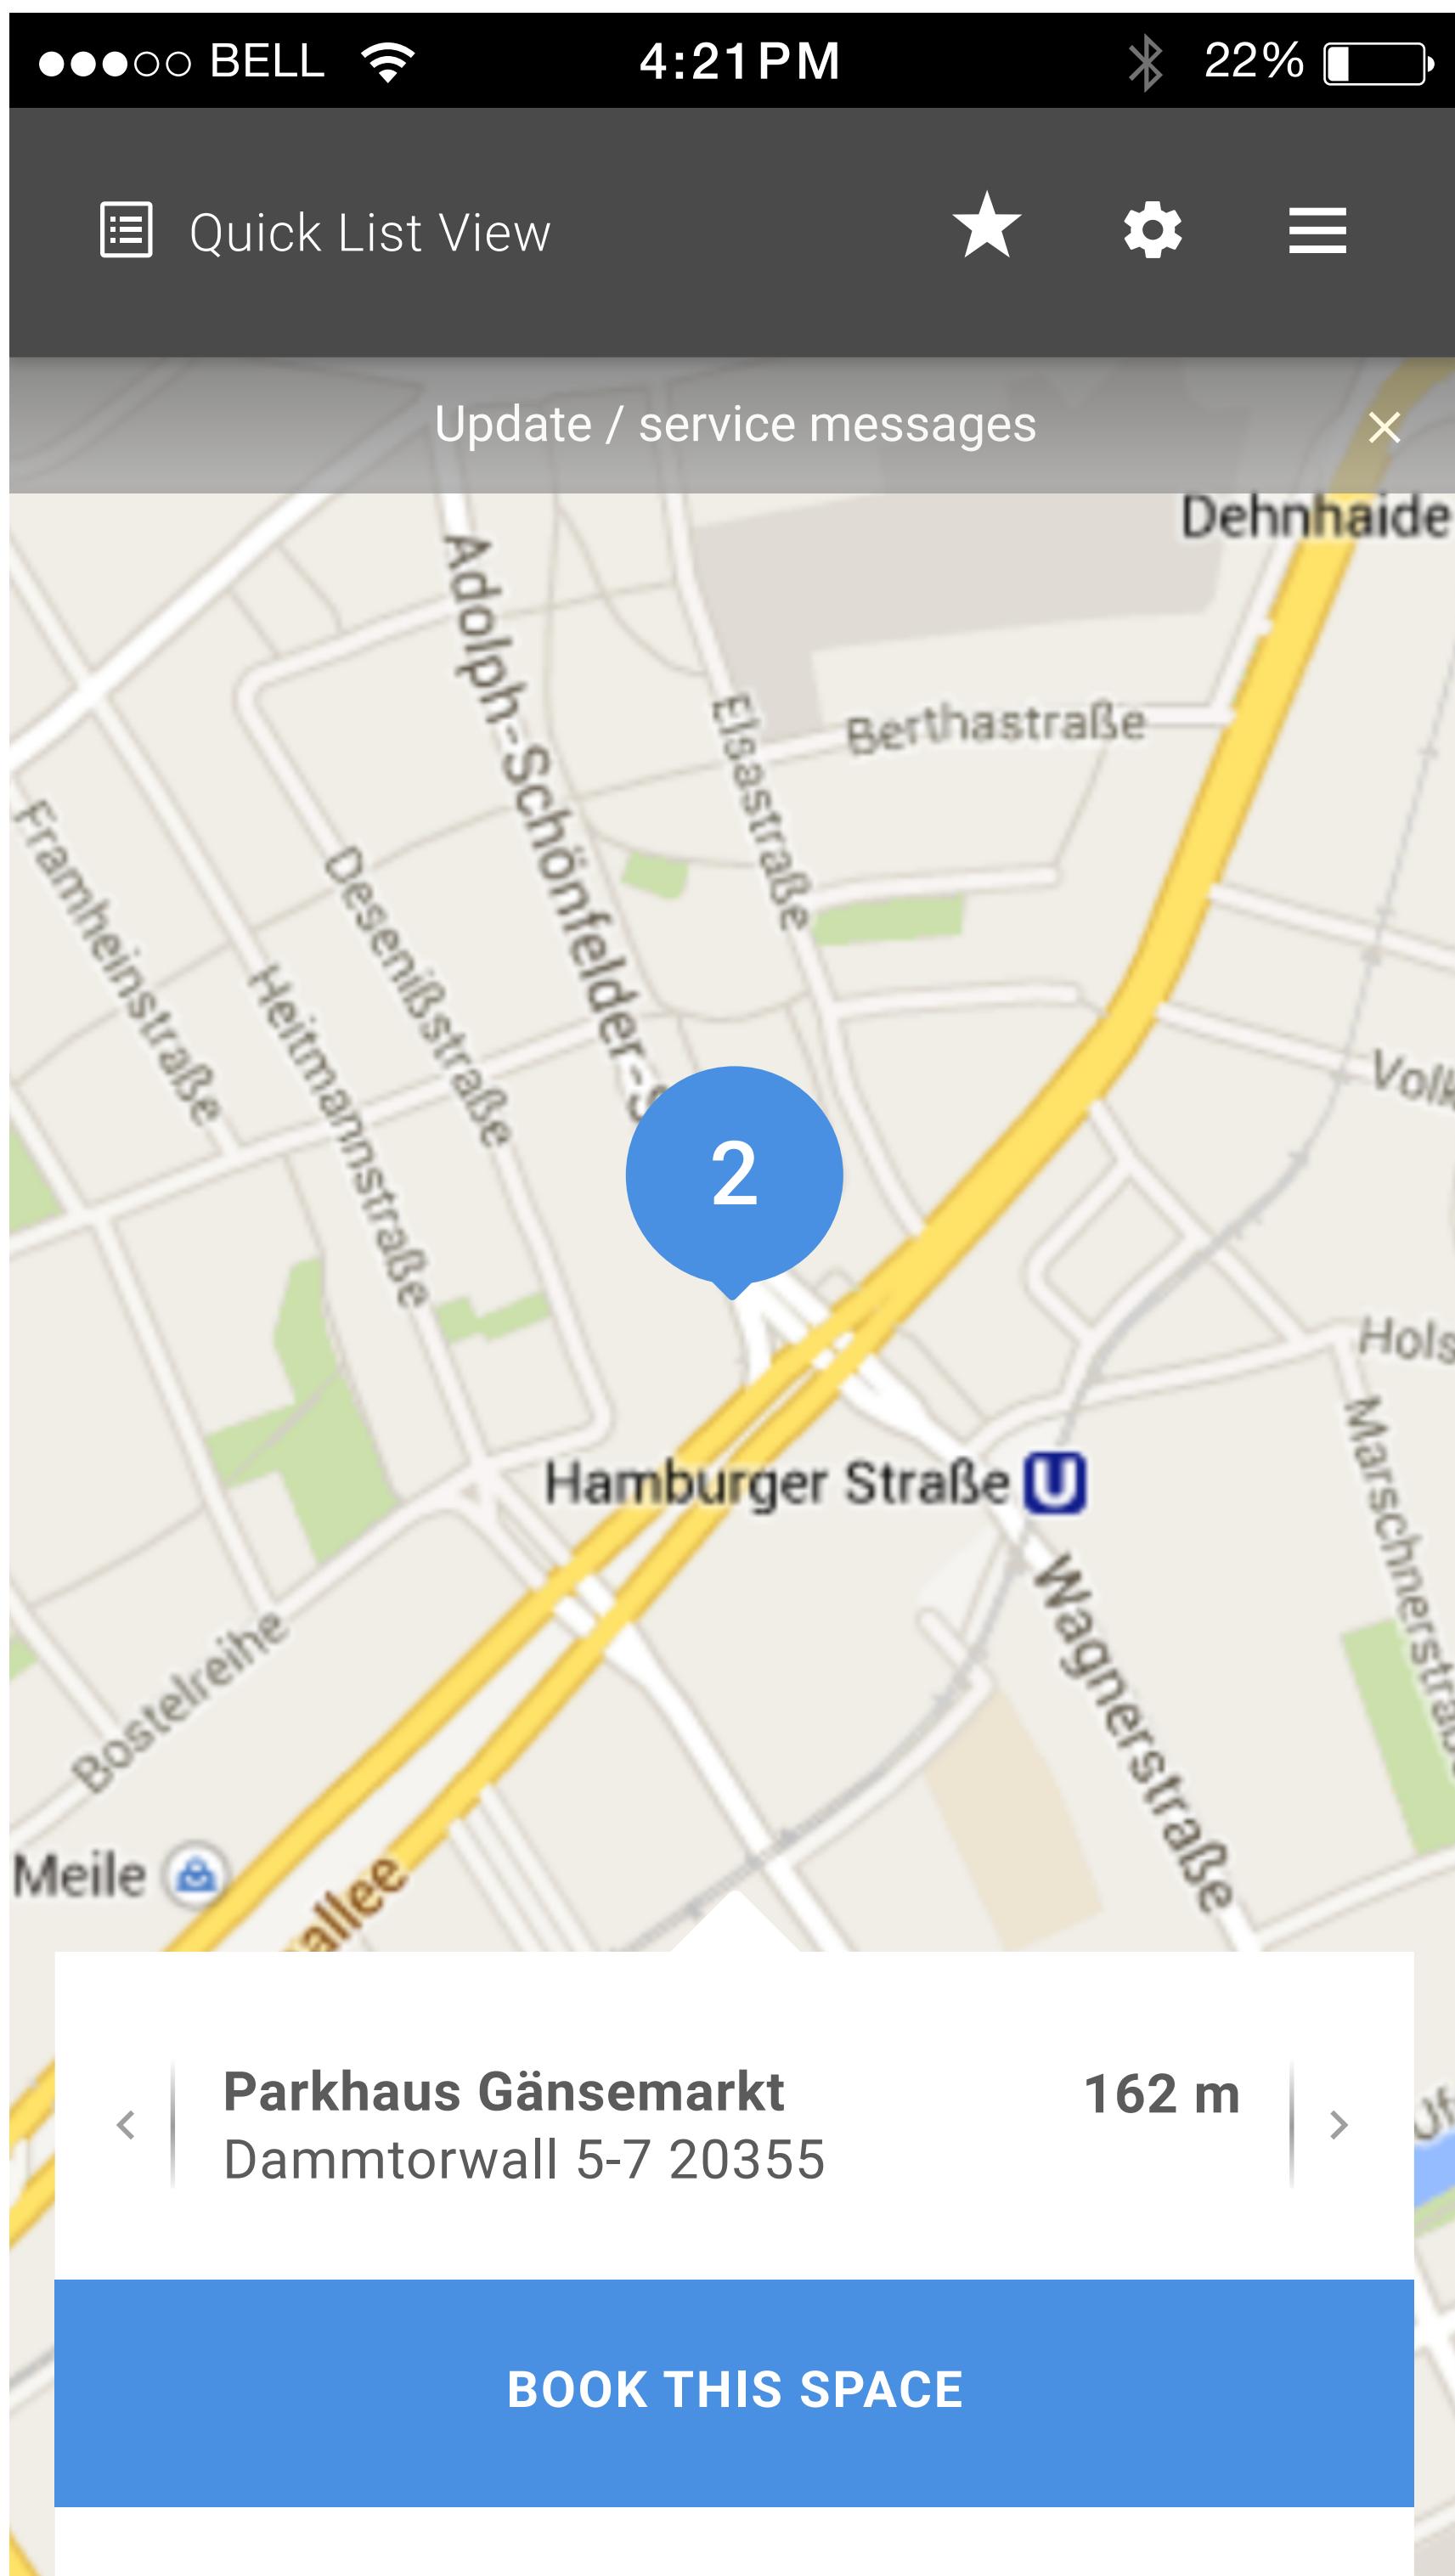

Entrance Height: 2,10 m

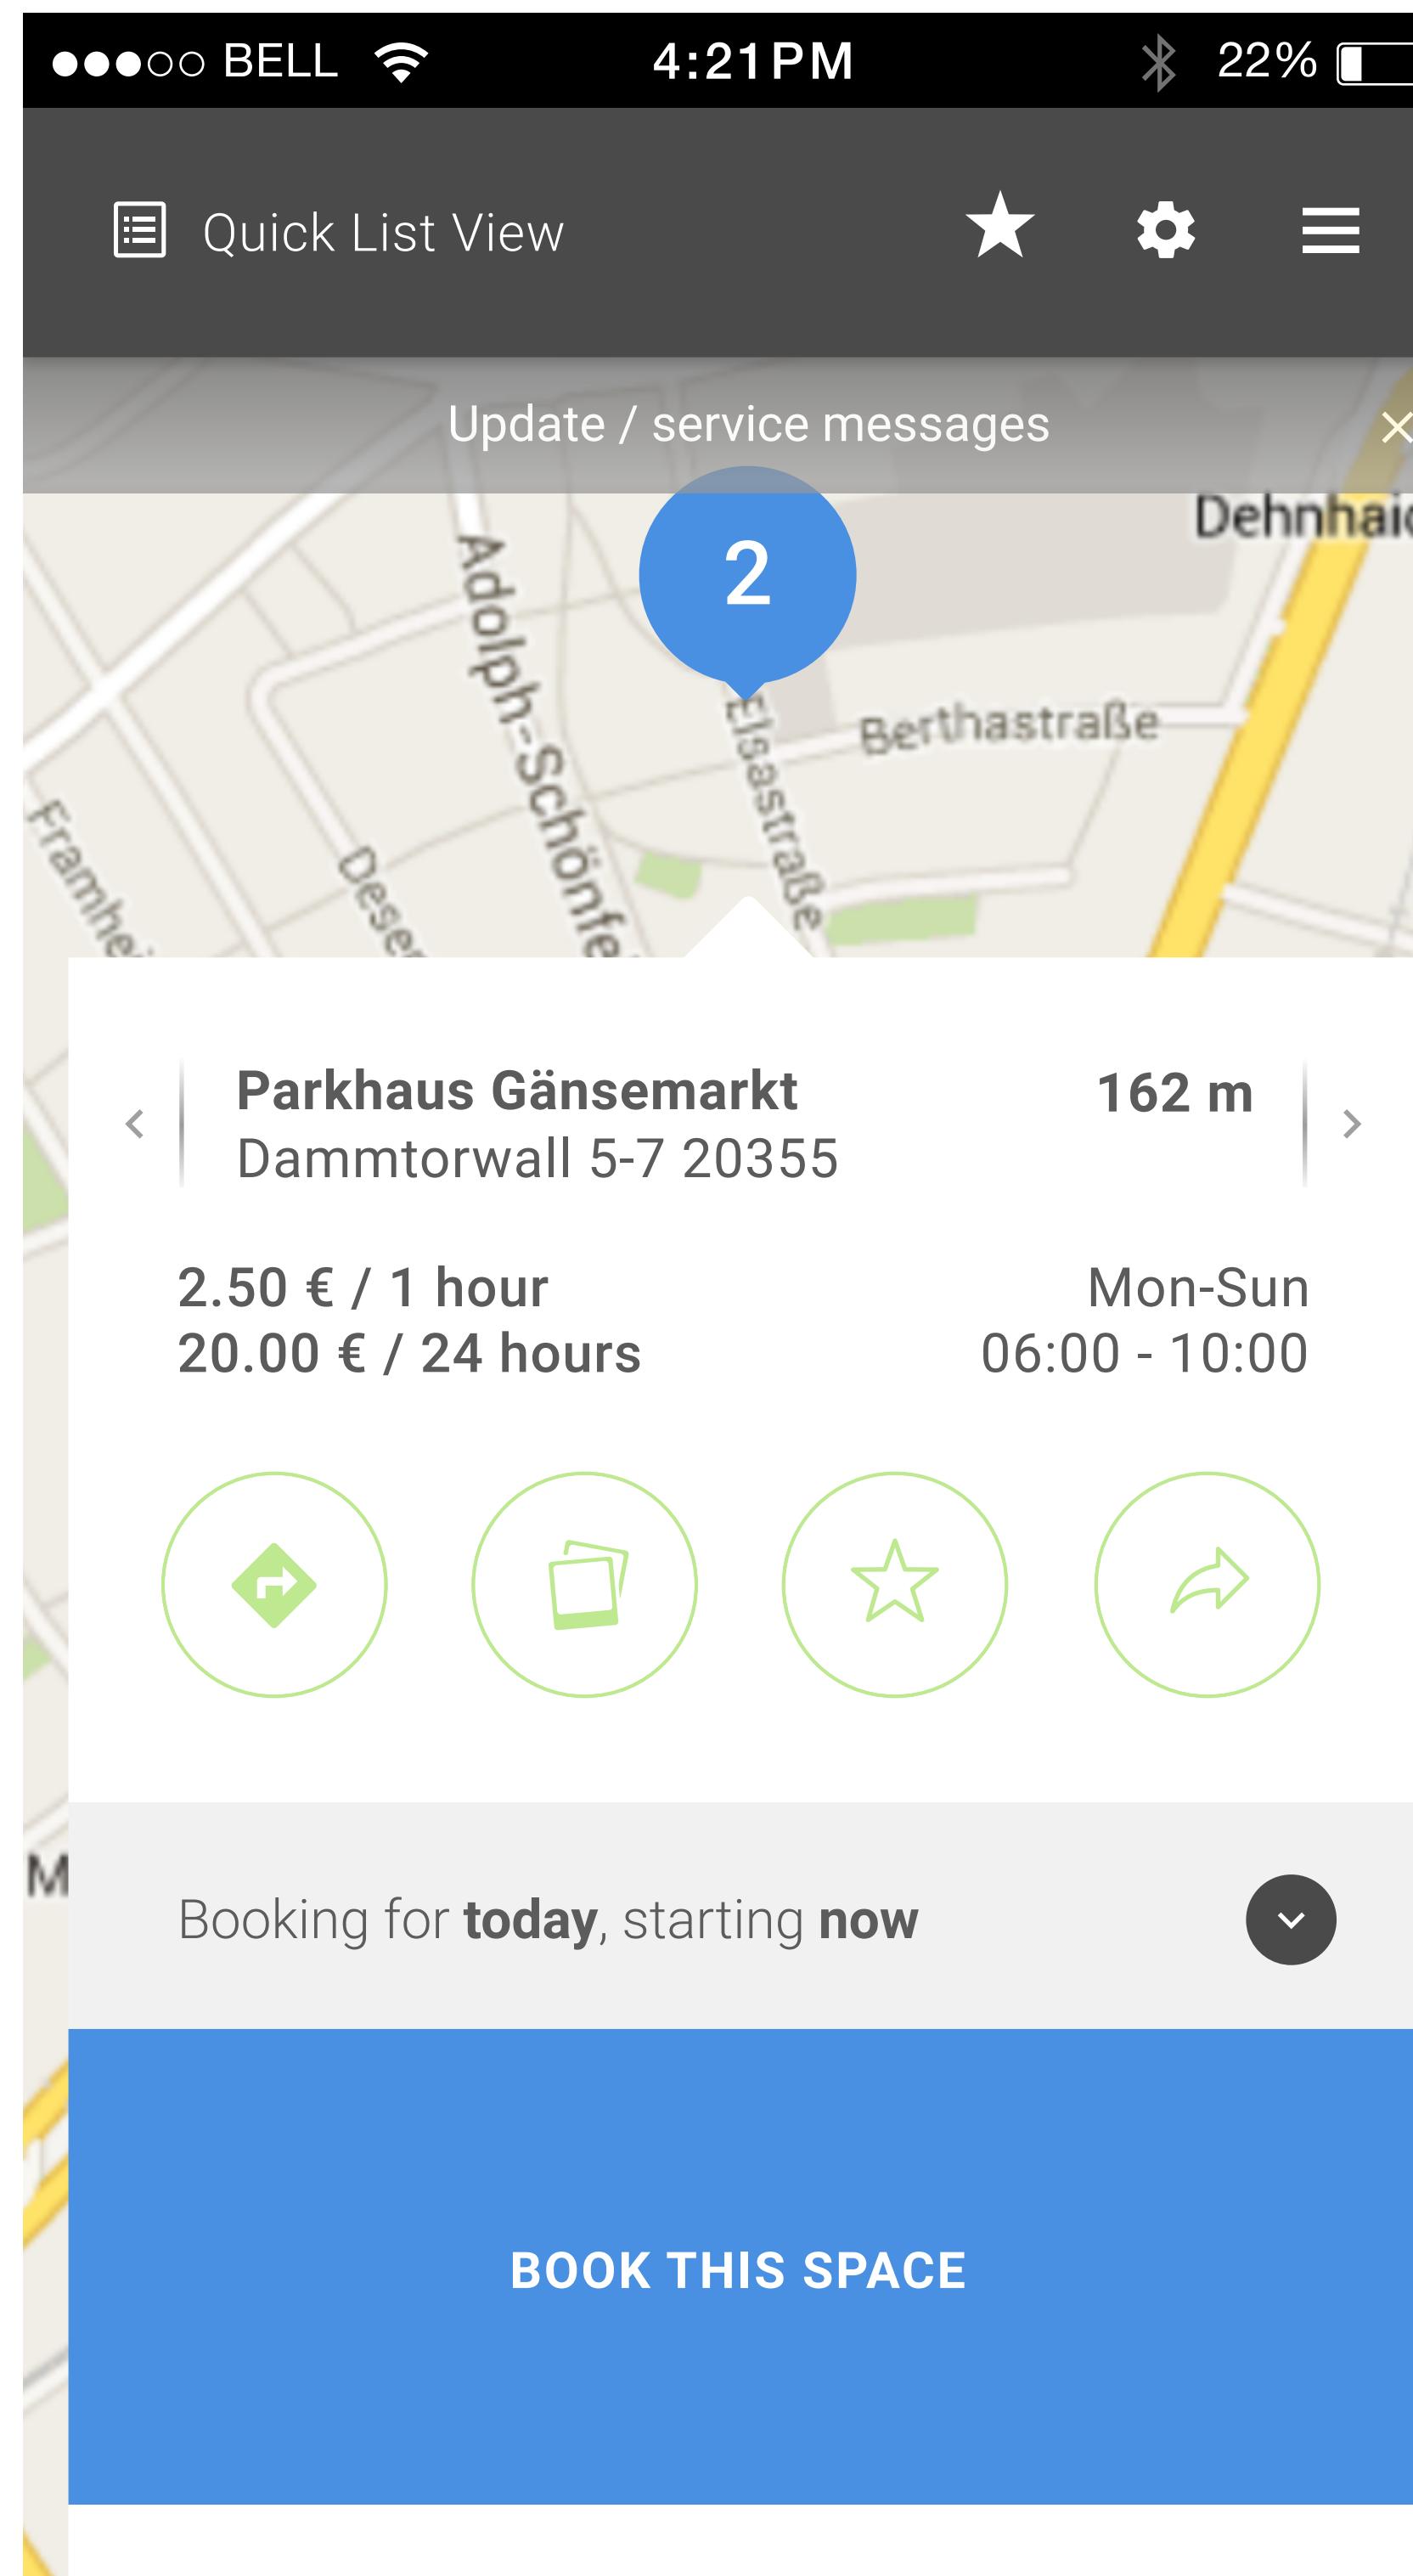

Description:

Lore ipsum dolor sit amet, consectetur adipiscing elit. Donec ultrices, massa nec cursus finibus, quam nulla sollicitudin est, et feugiat erat odio in quam.

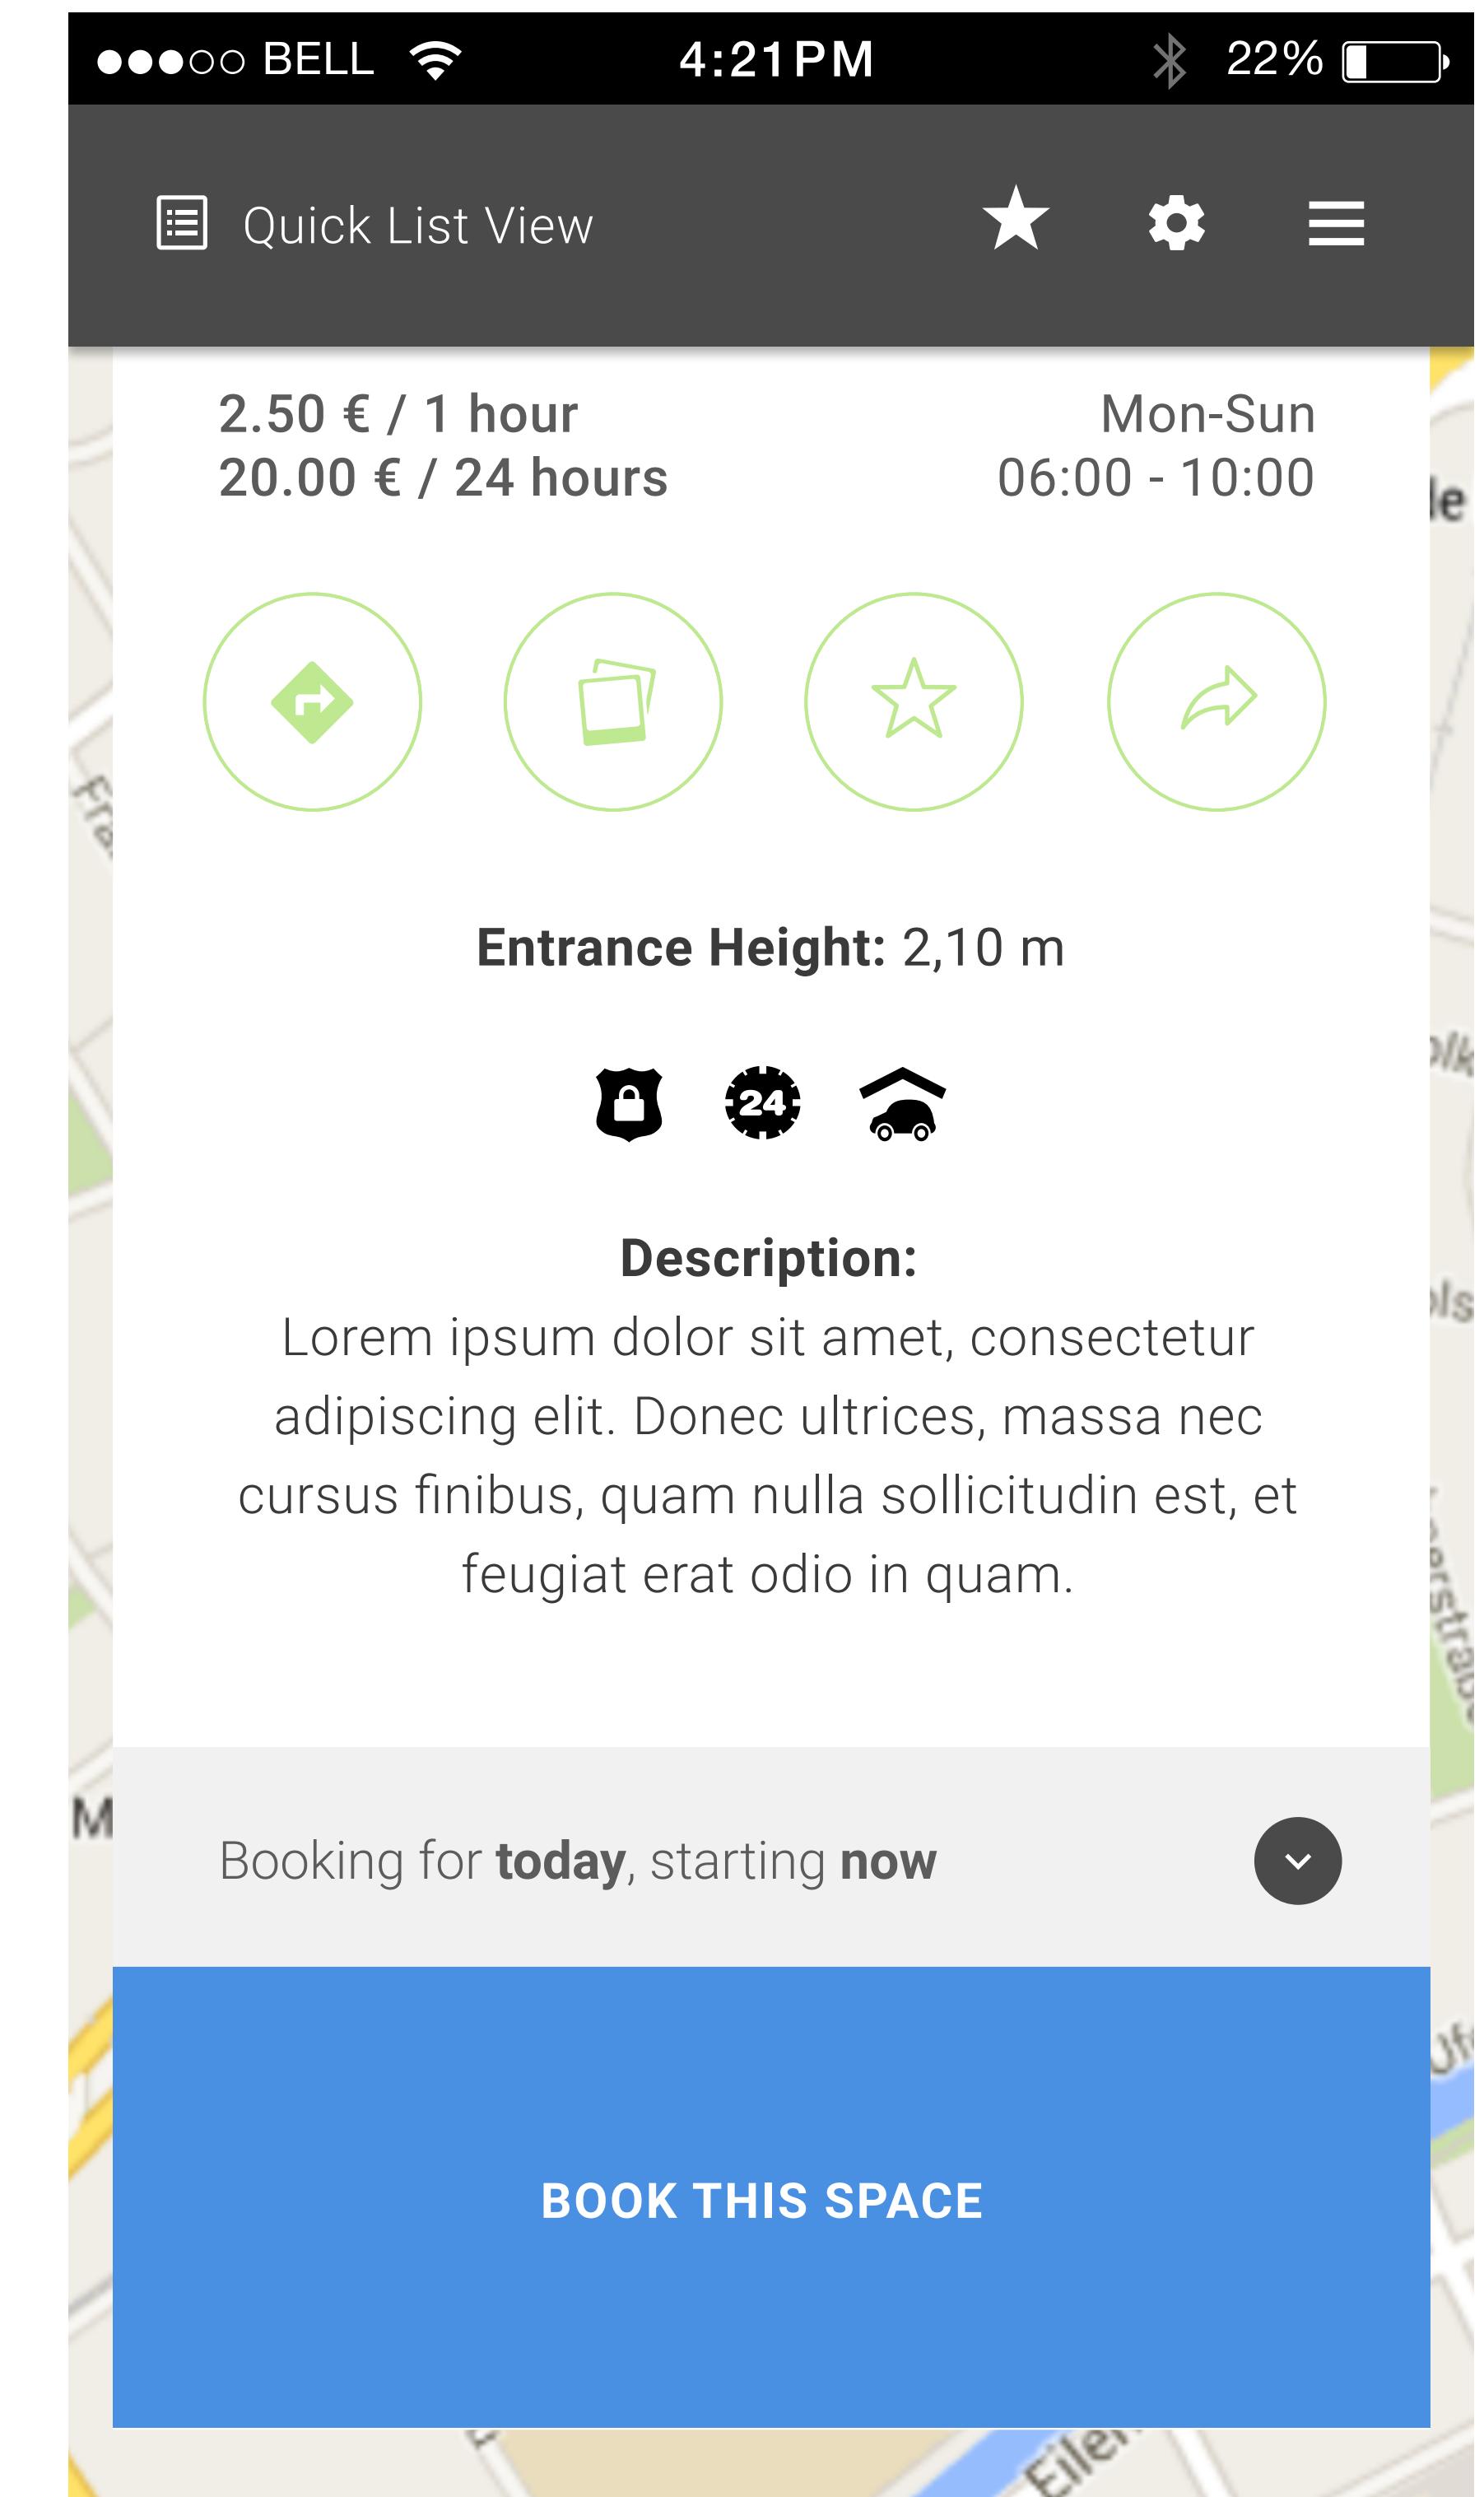

Parking space info panel

Condensed view. Swiping on parking space name cycles through spaces in map view.

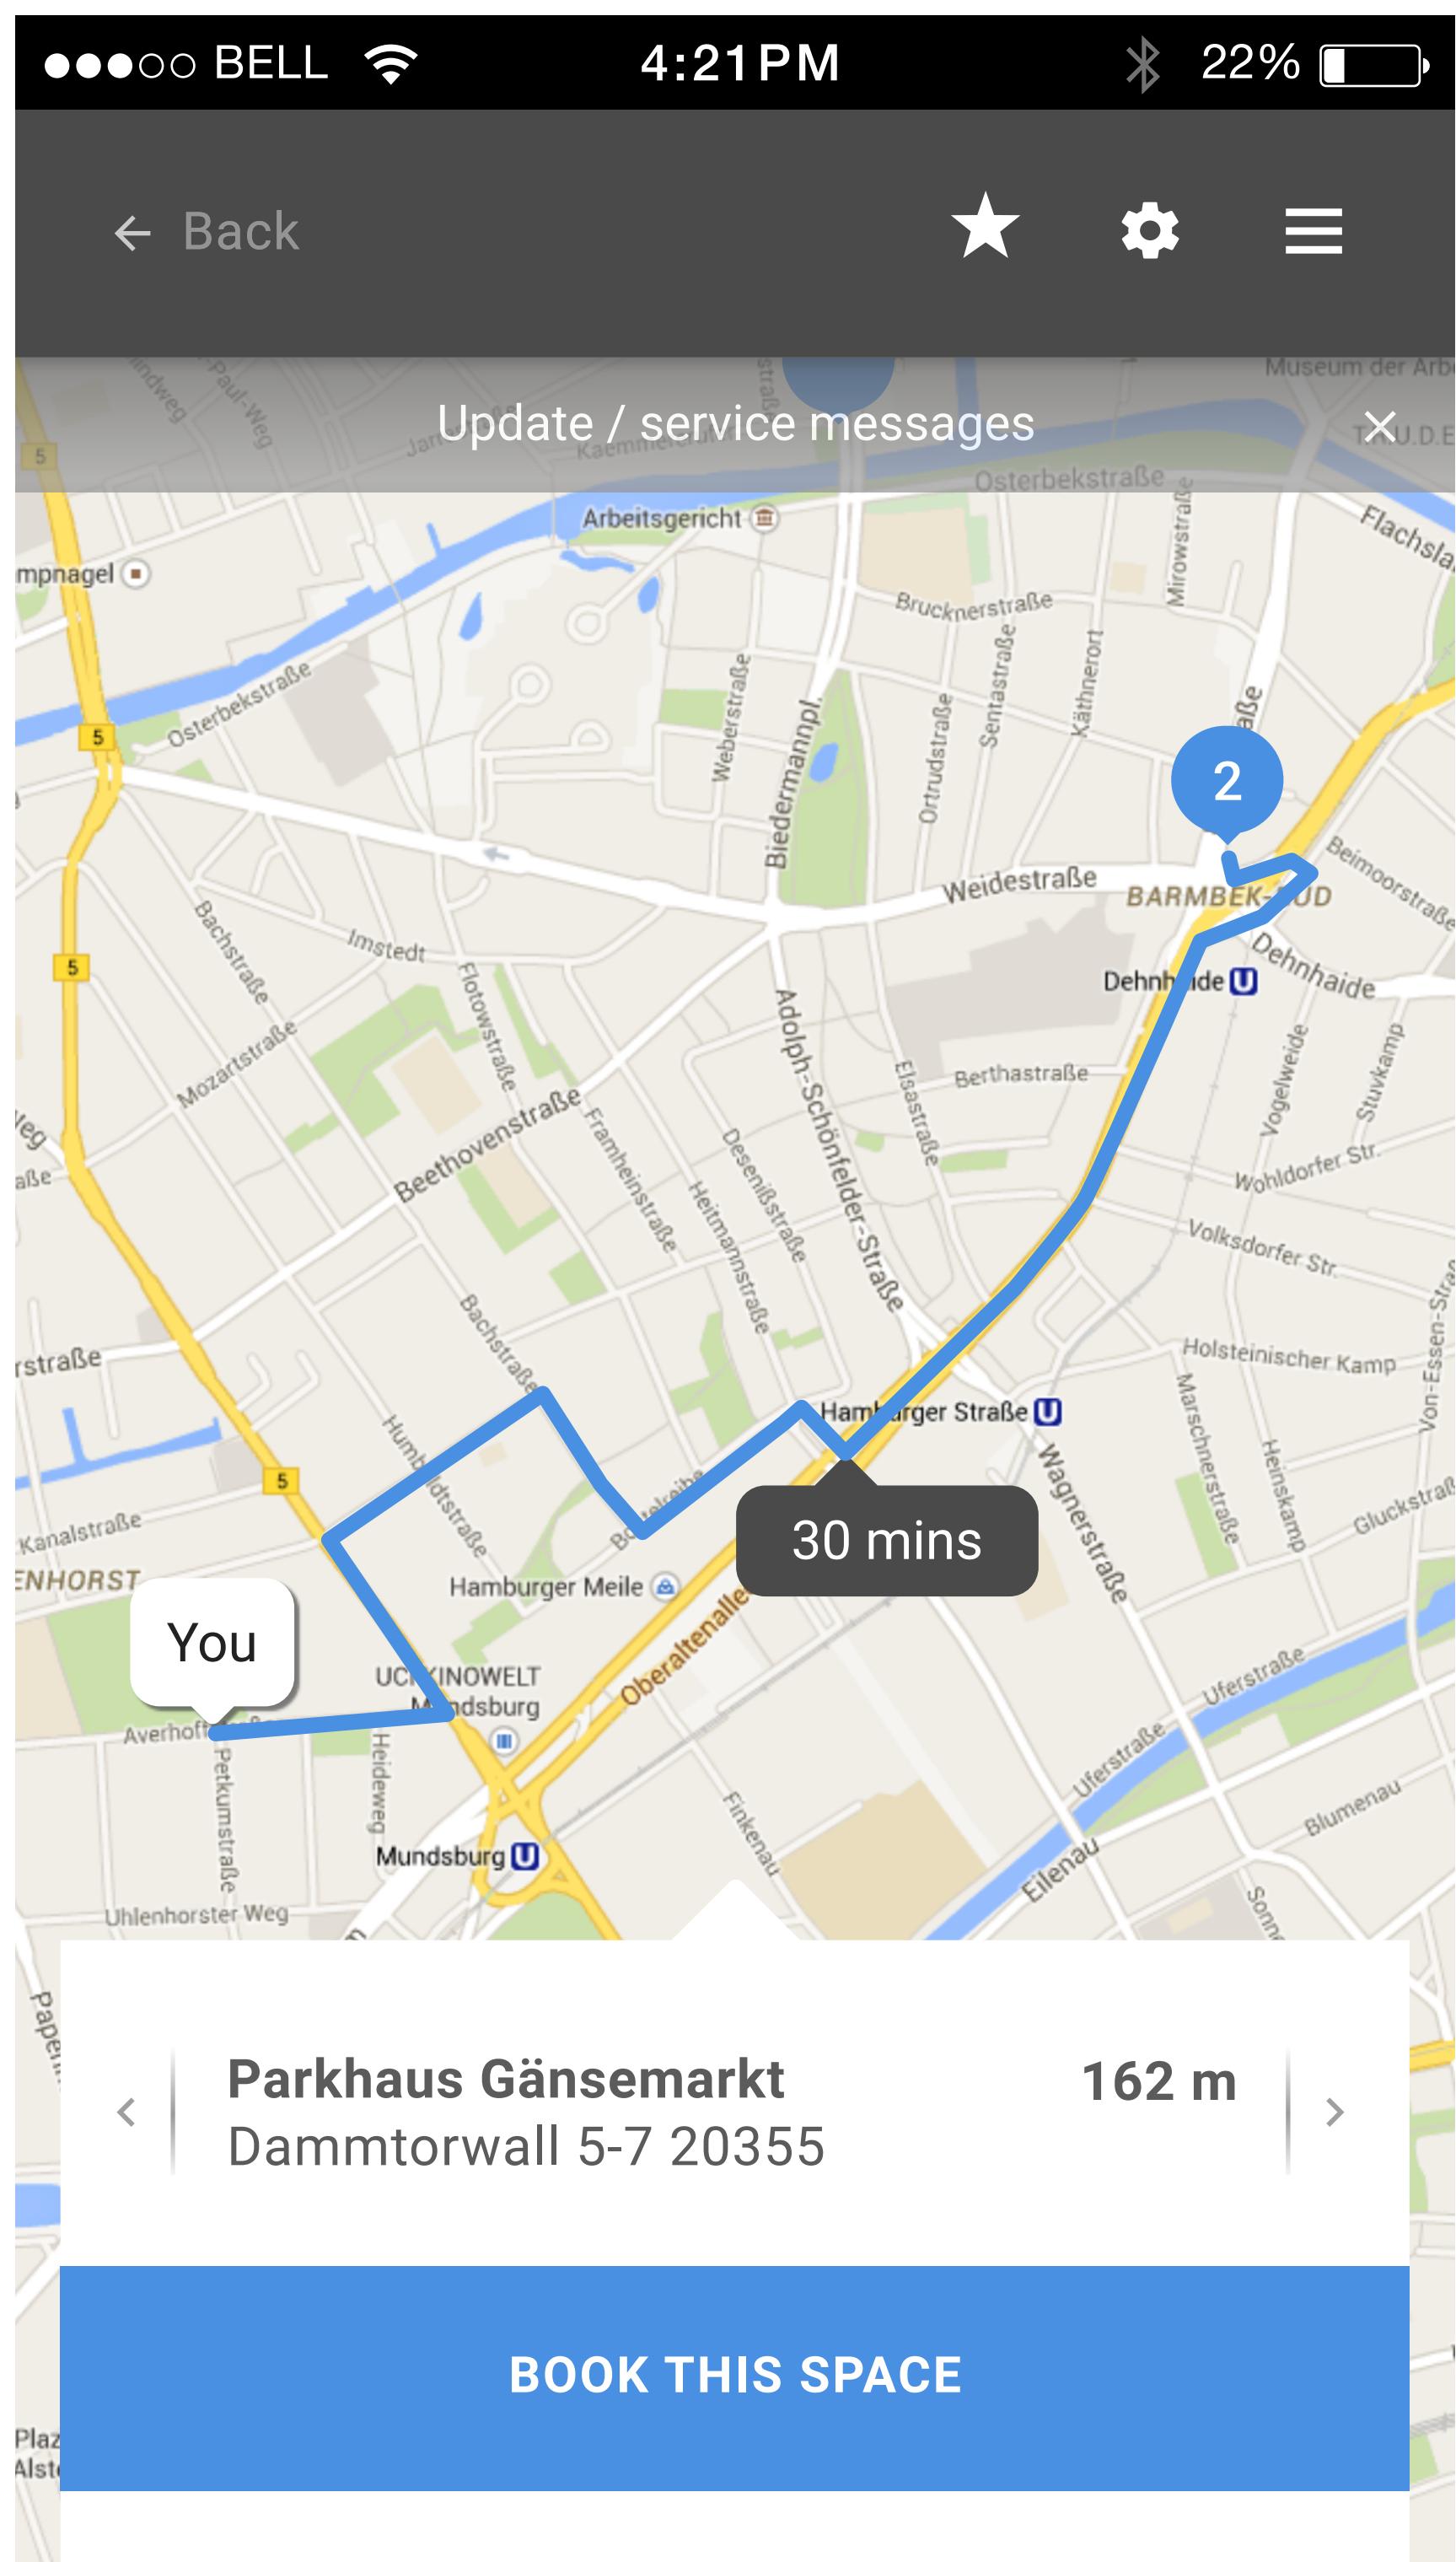

Default info view. Activated by tapping on a pin in map view, or tapping on an entry in quick list view.

Pull up full to reveal extra, non essential information.
Release reverts view back to default info view.

Parking space panel states

Directions view.

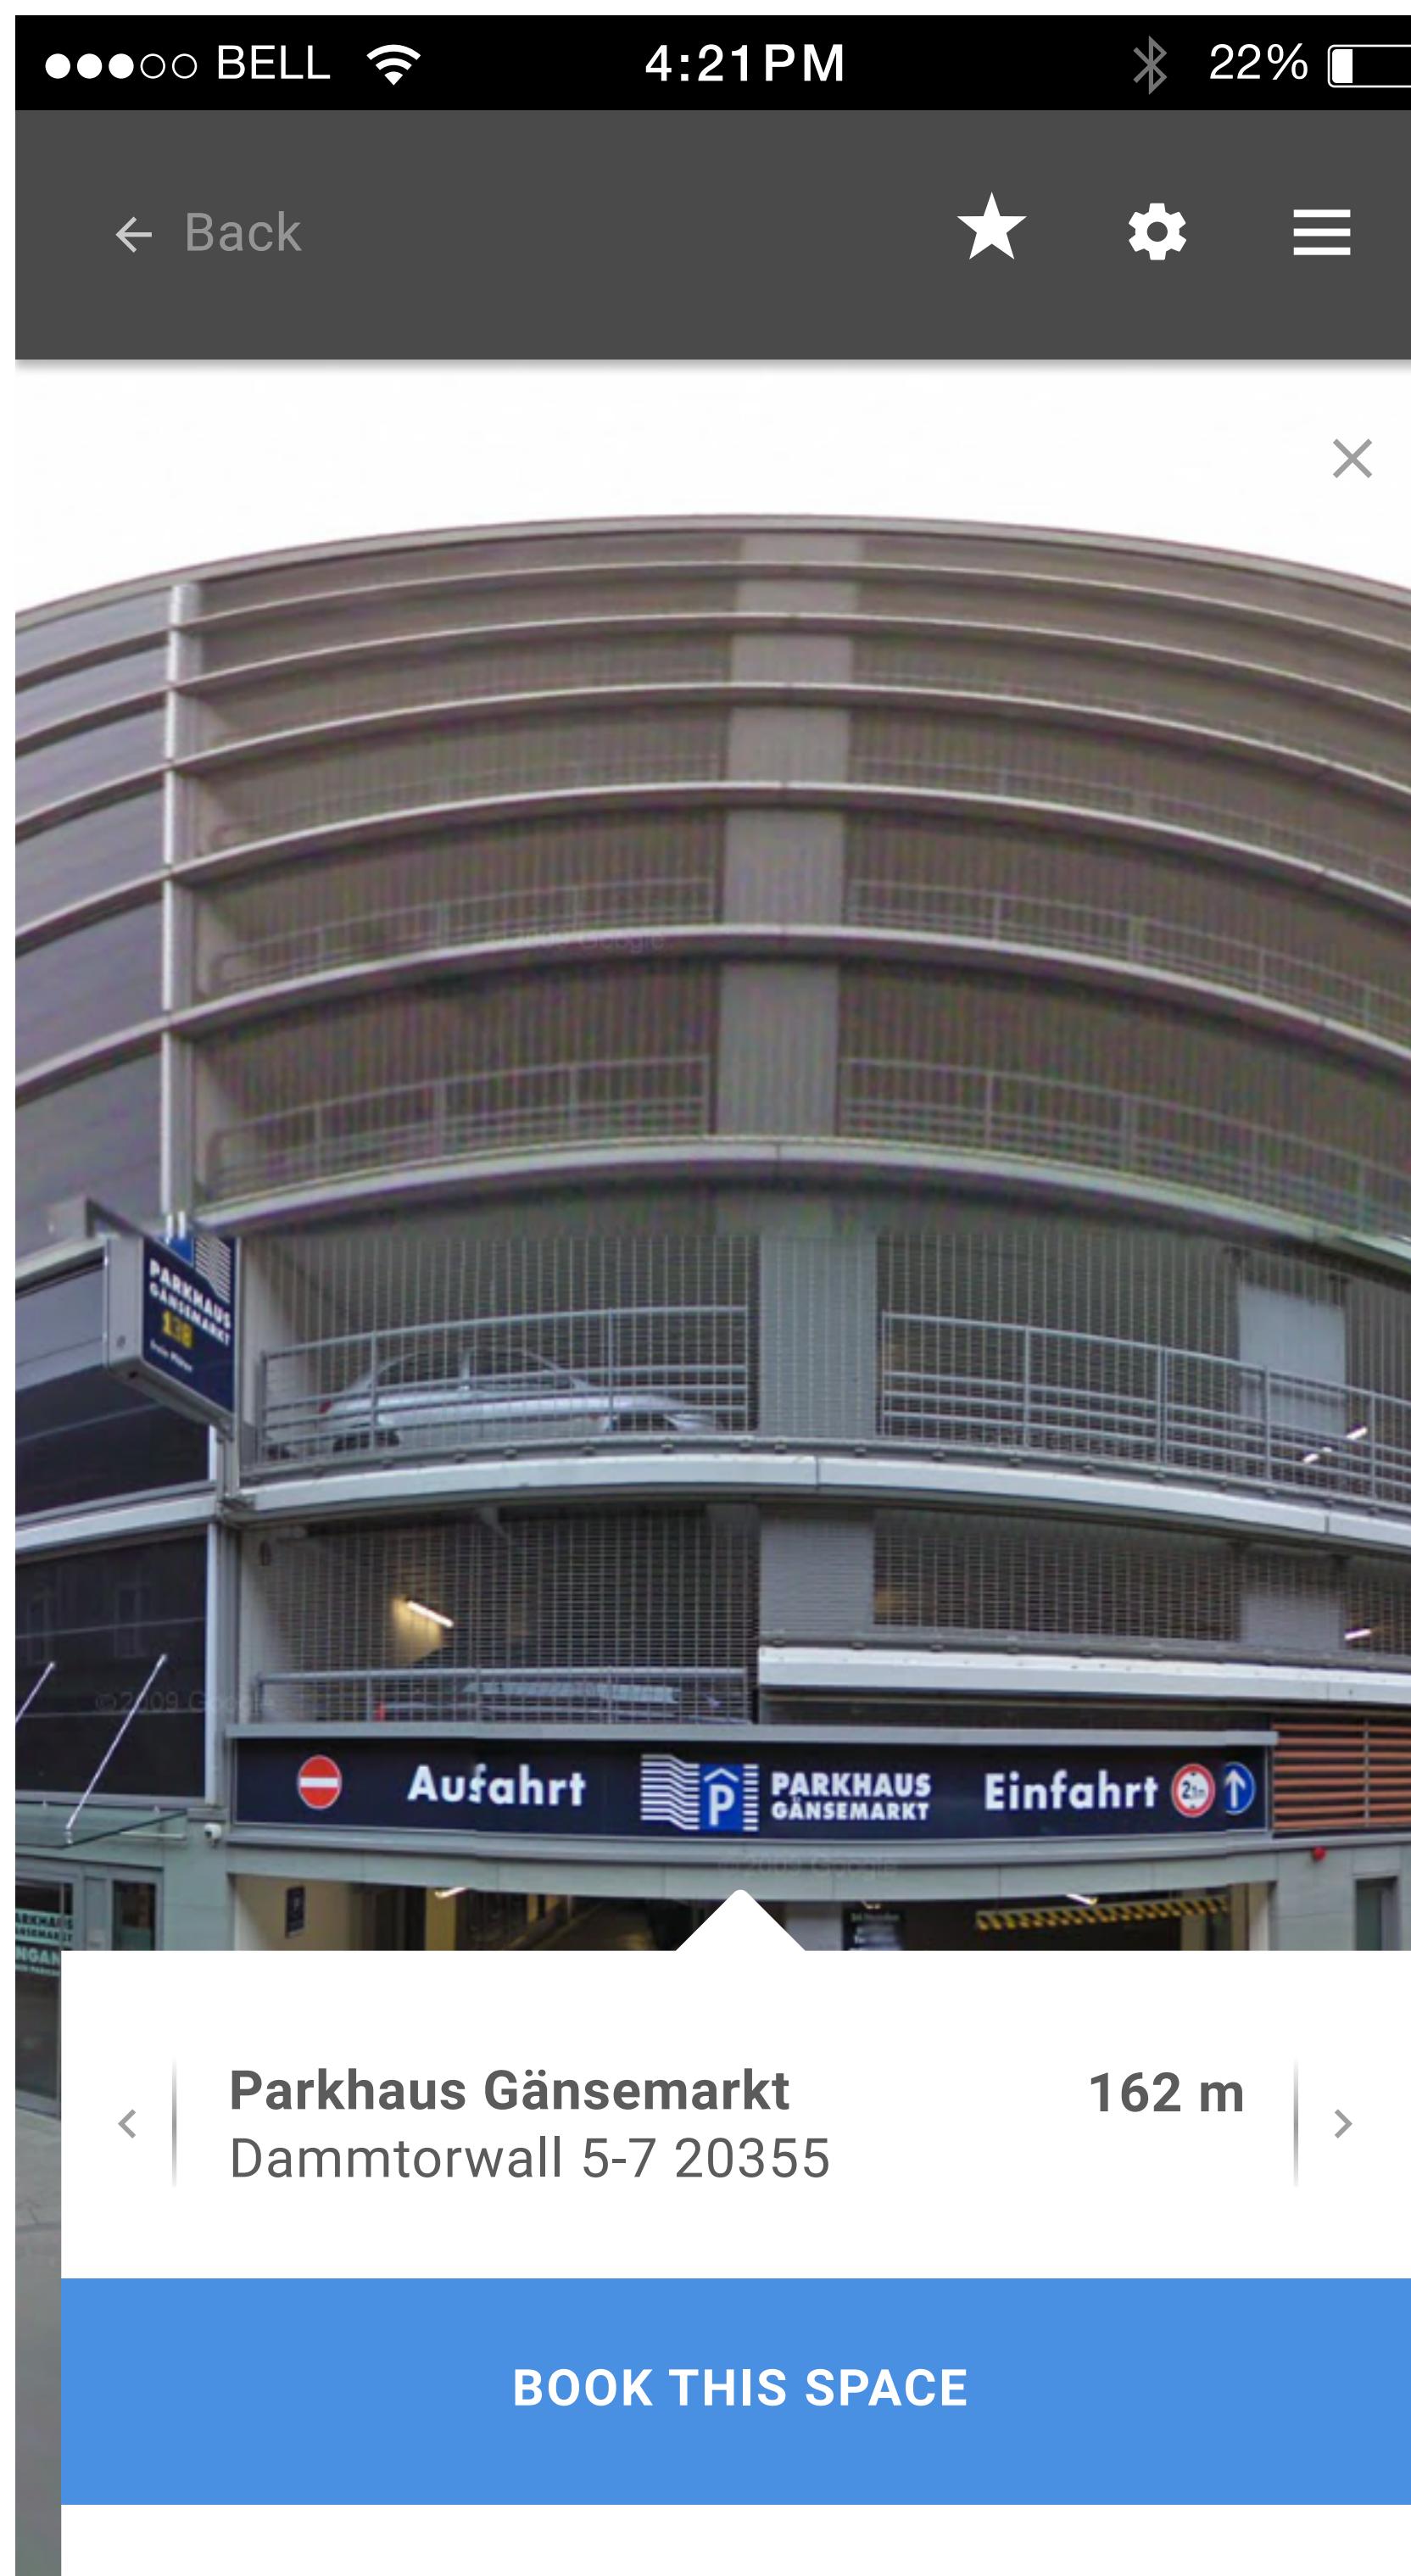

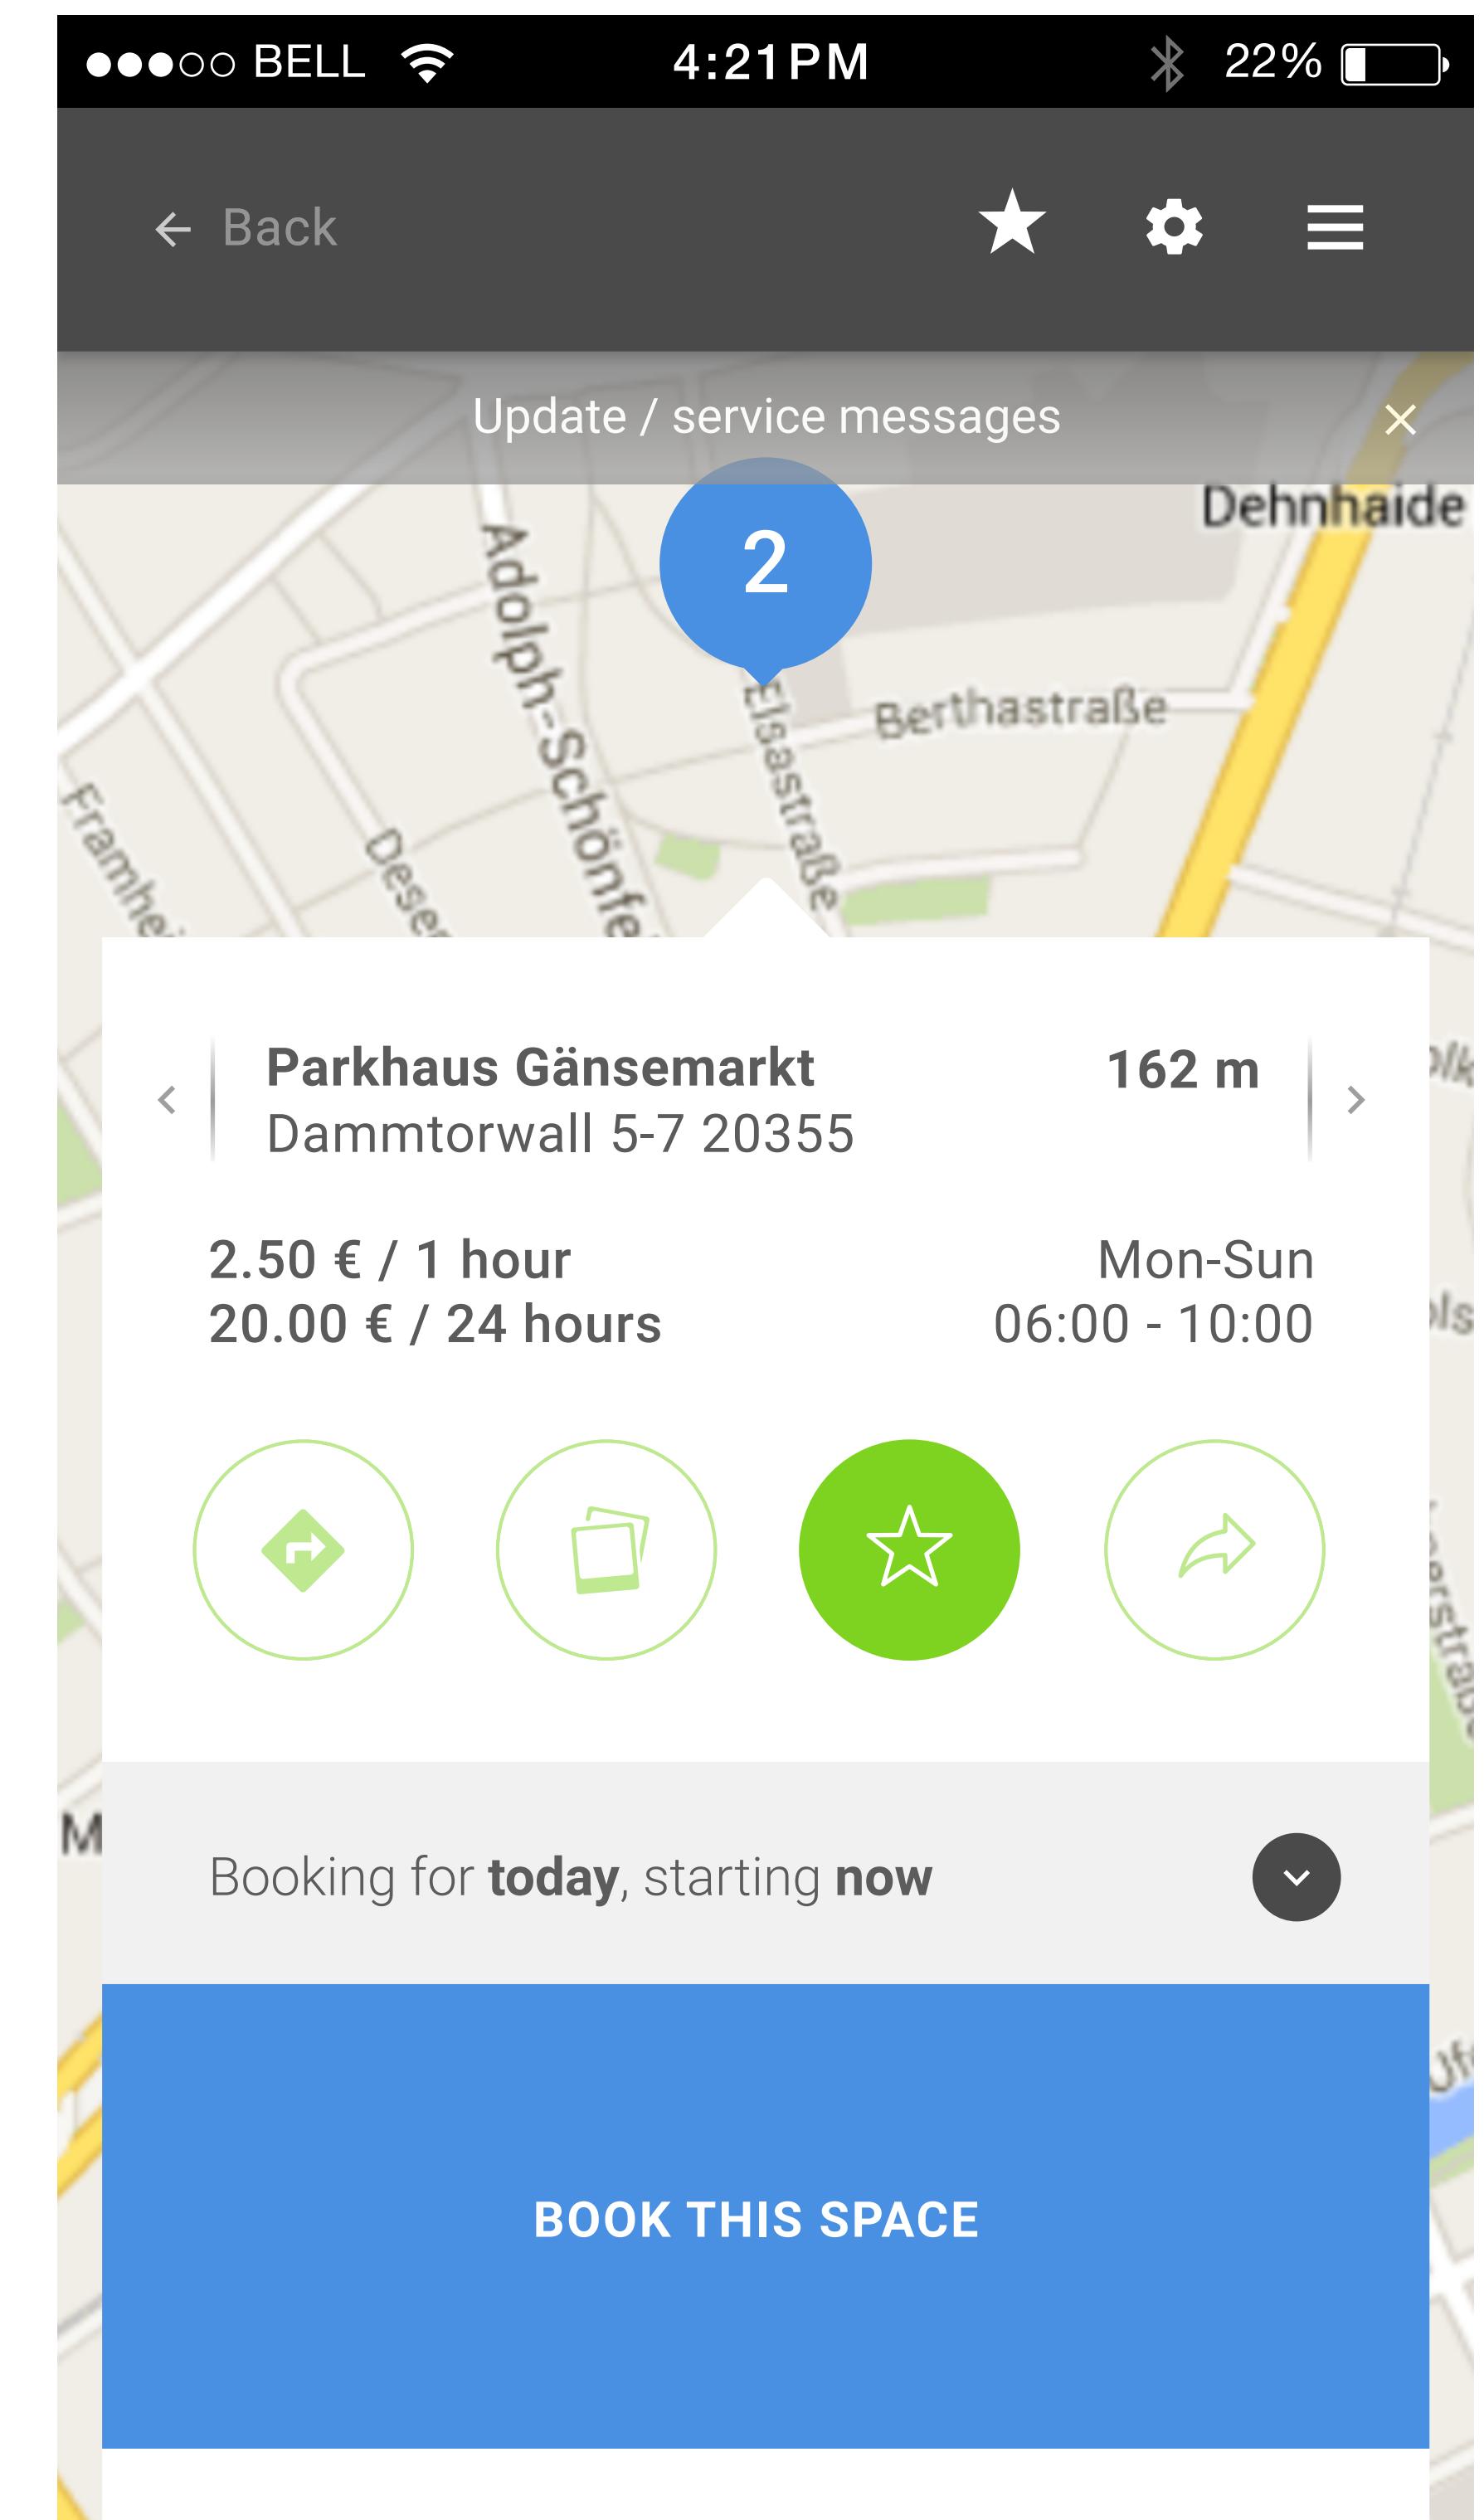

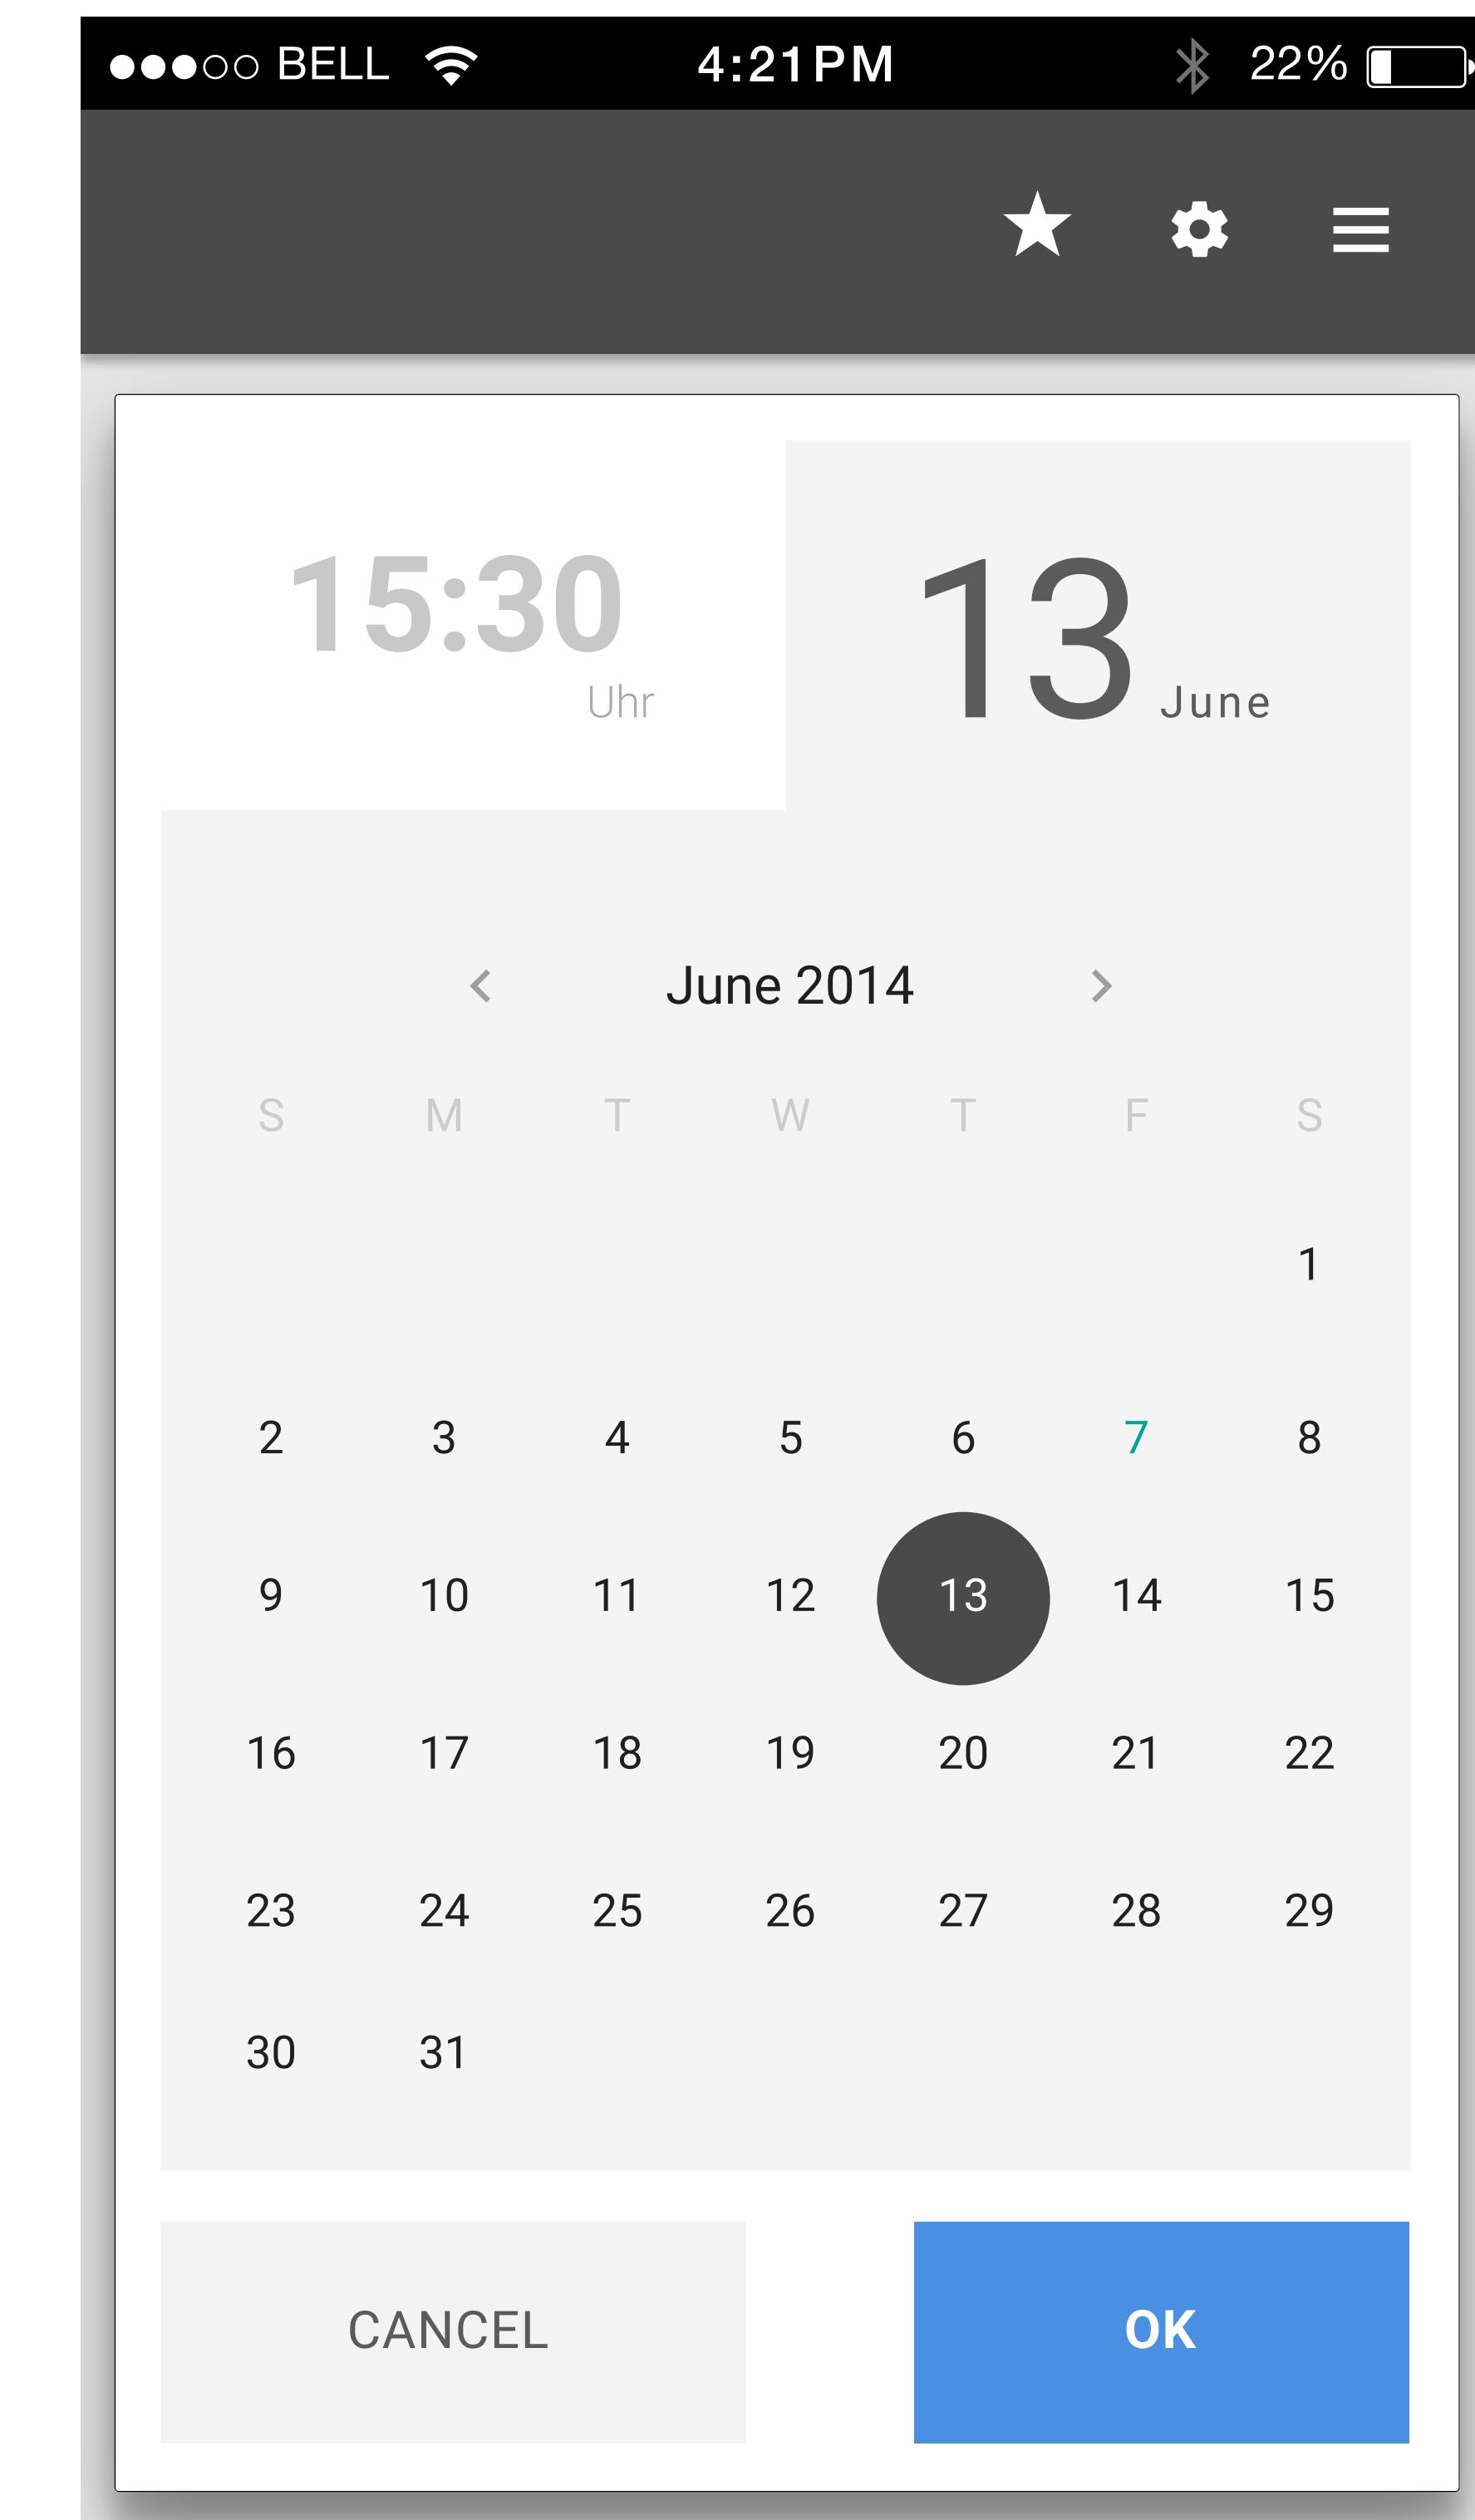

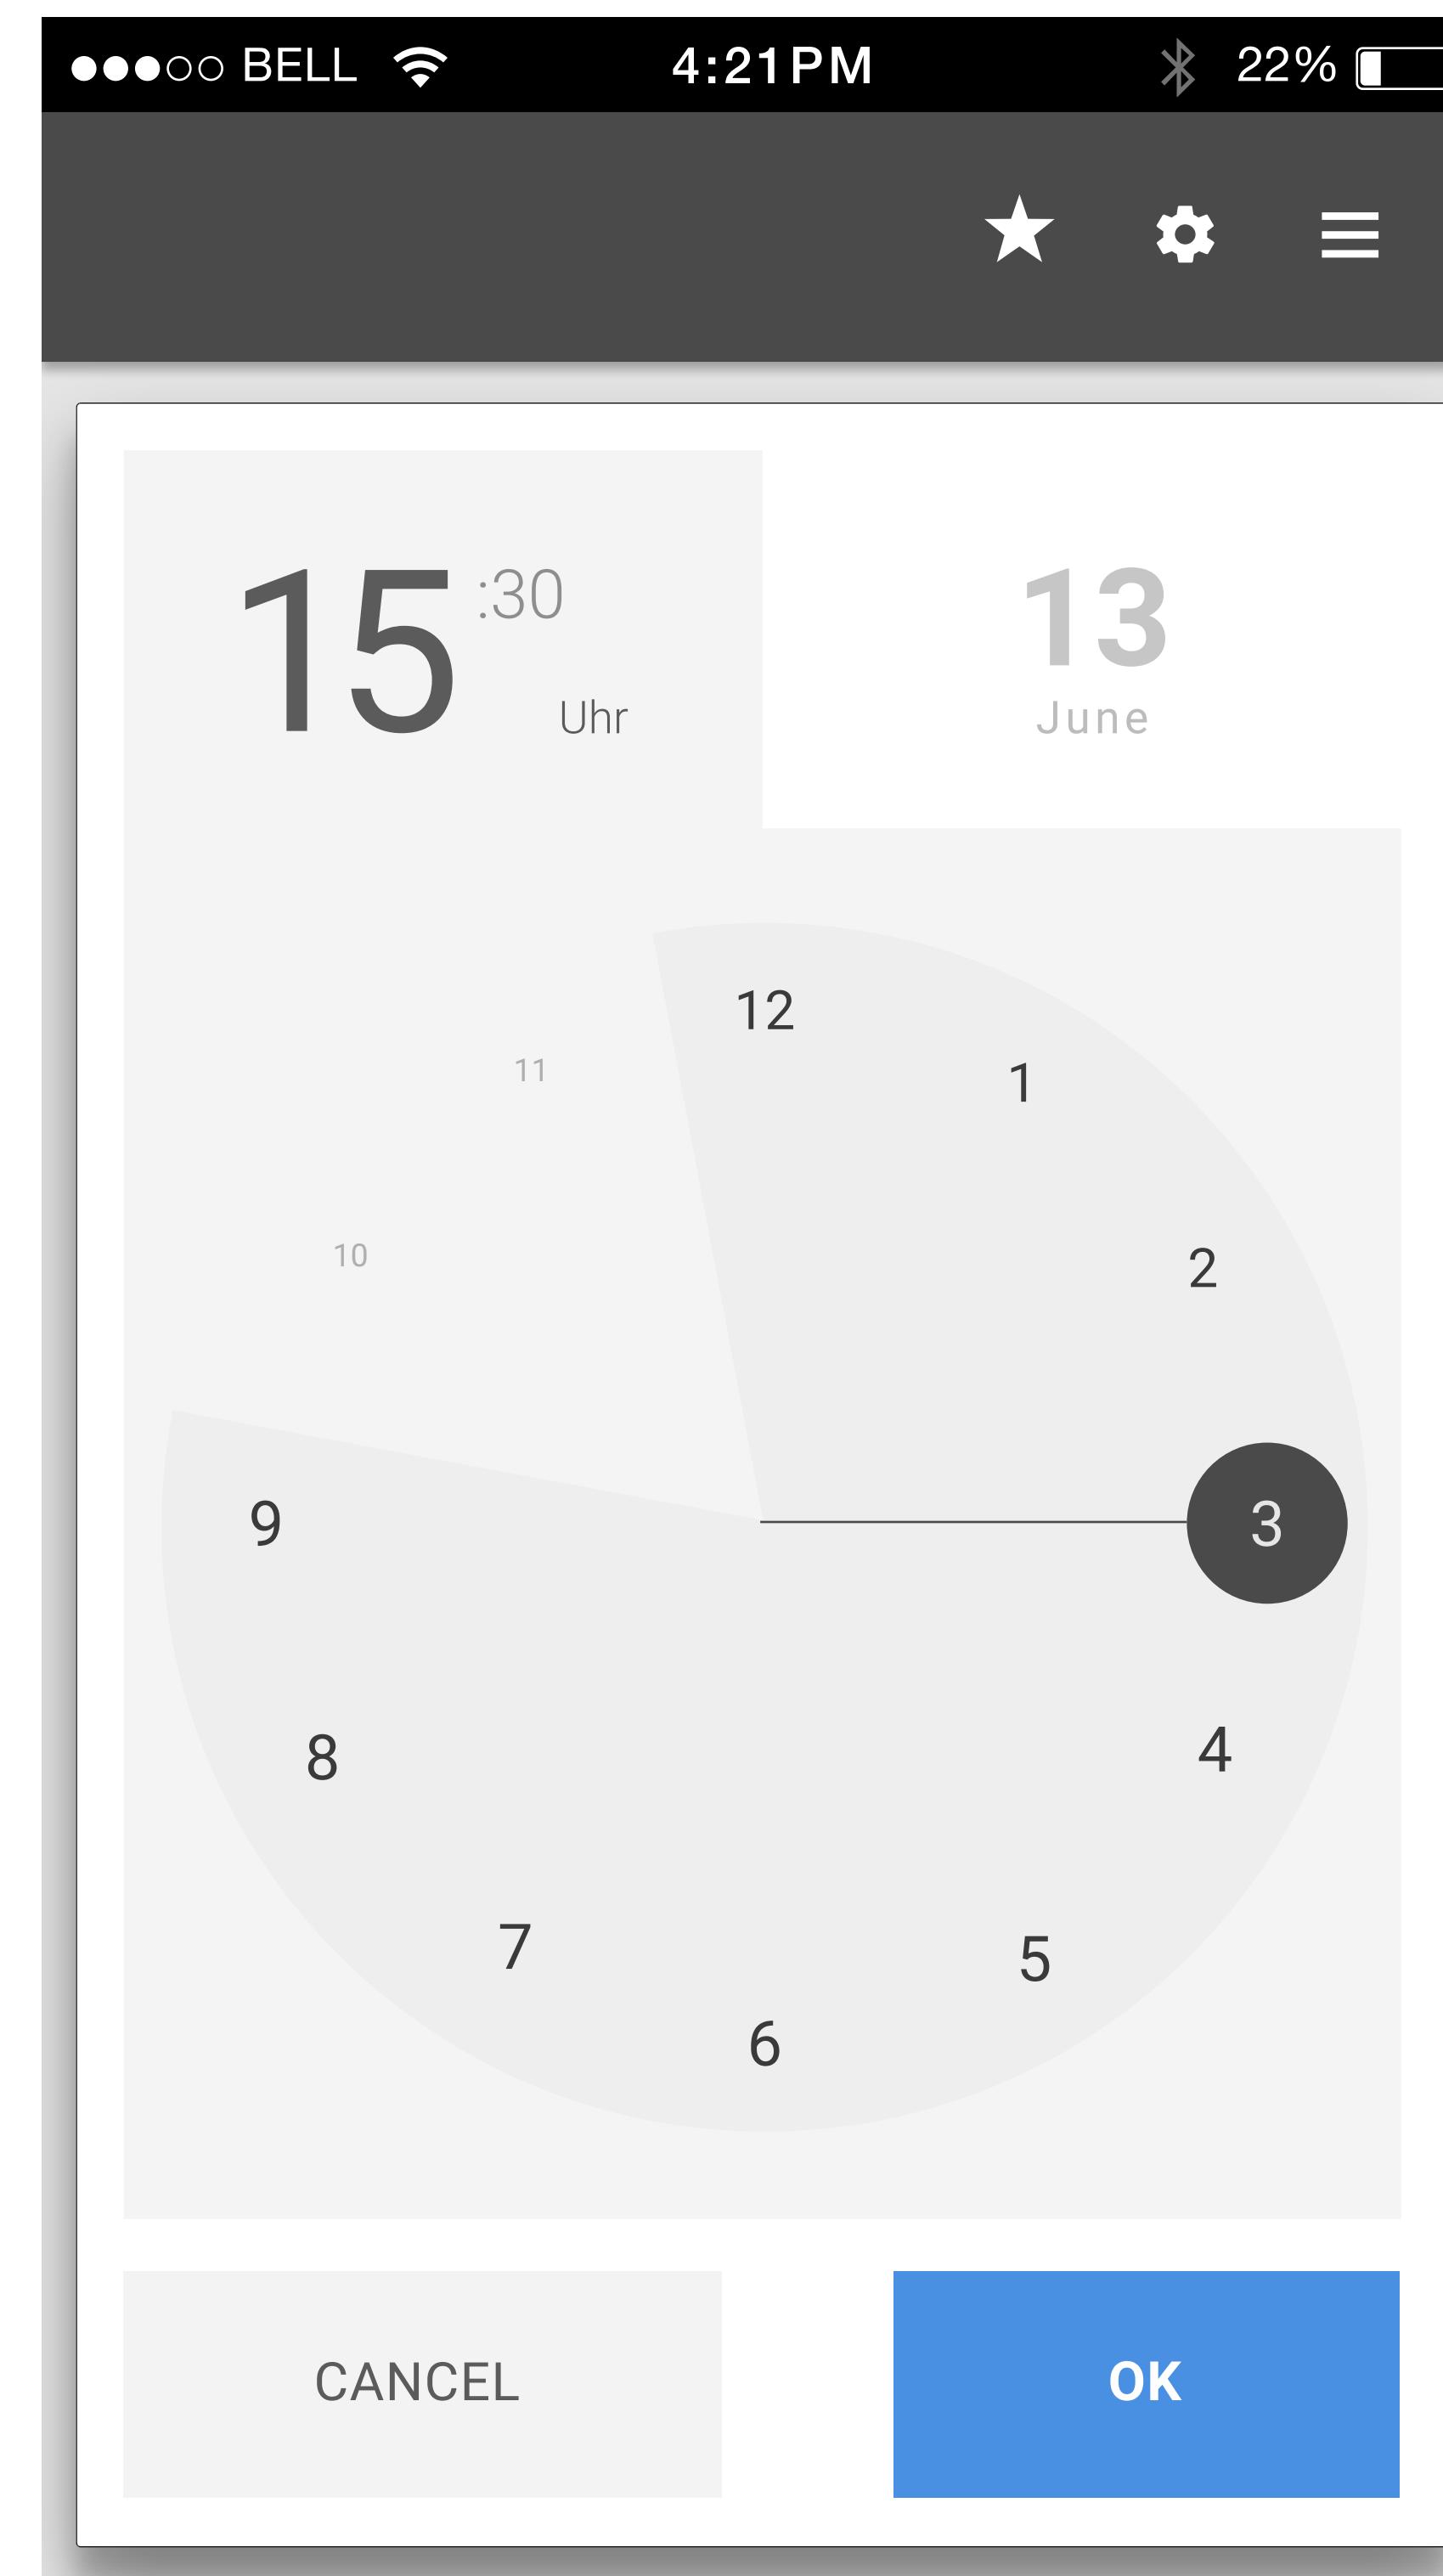

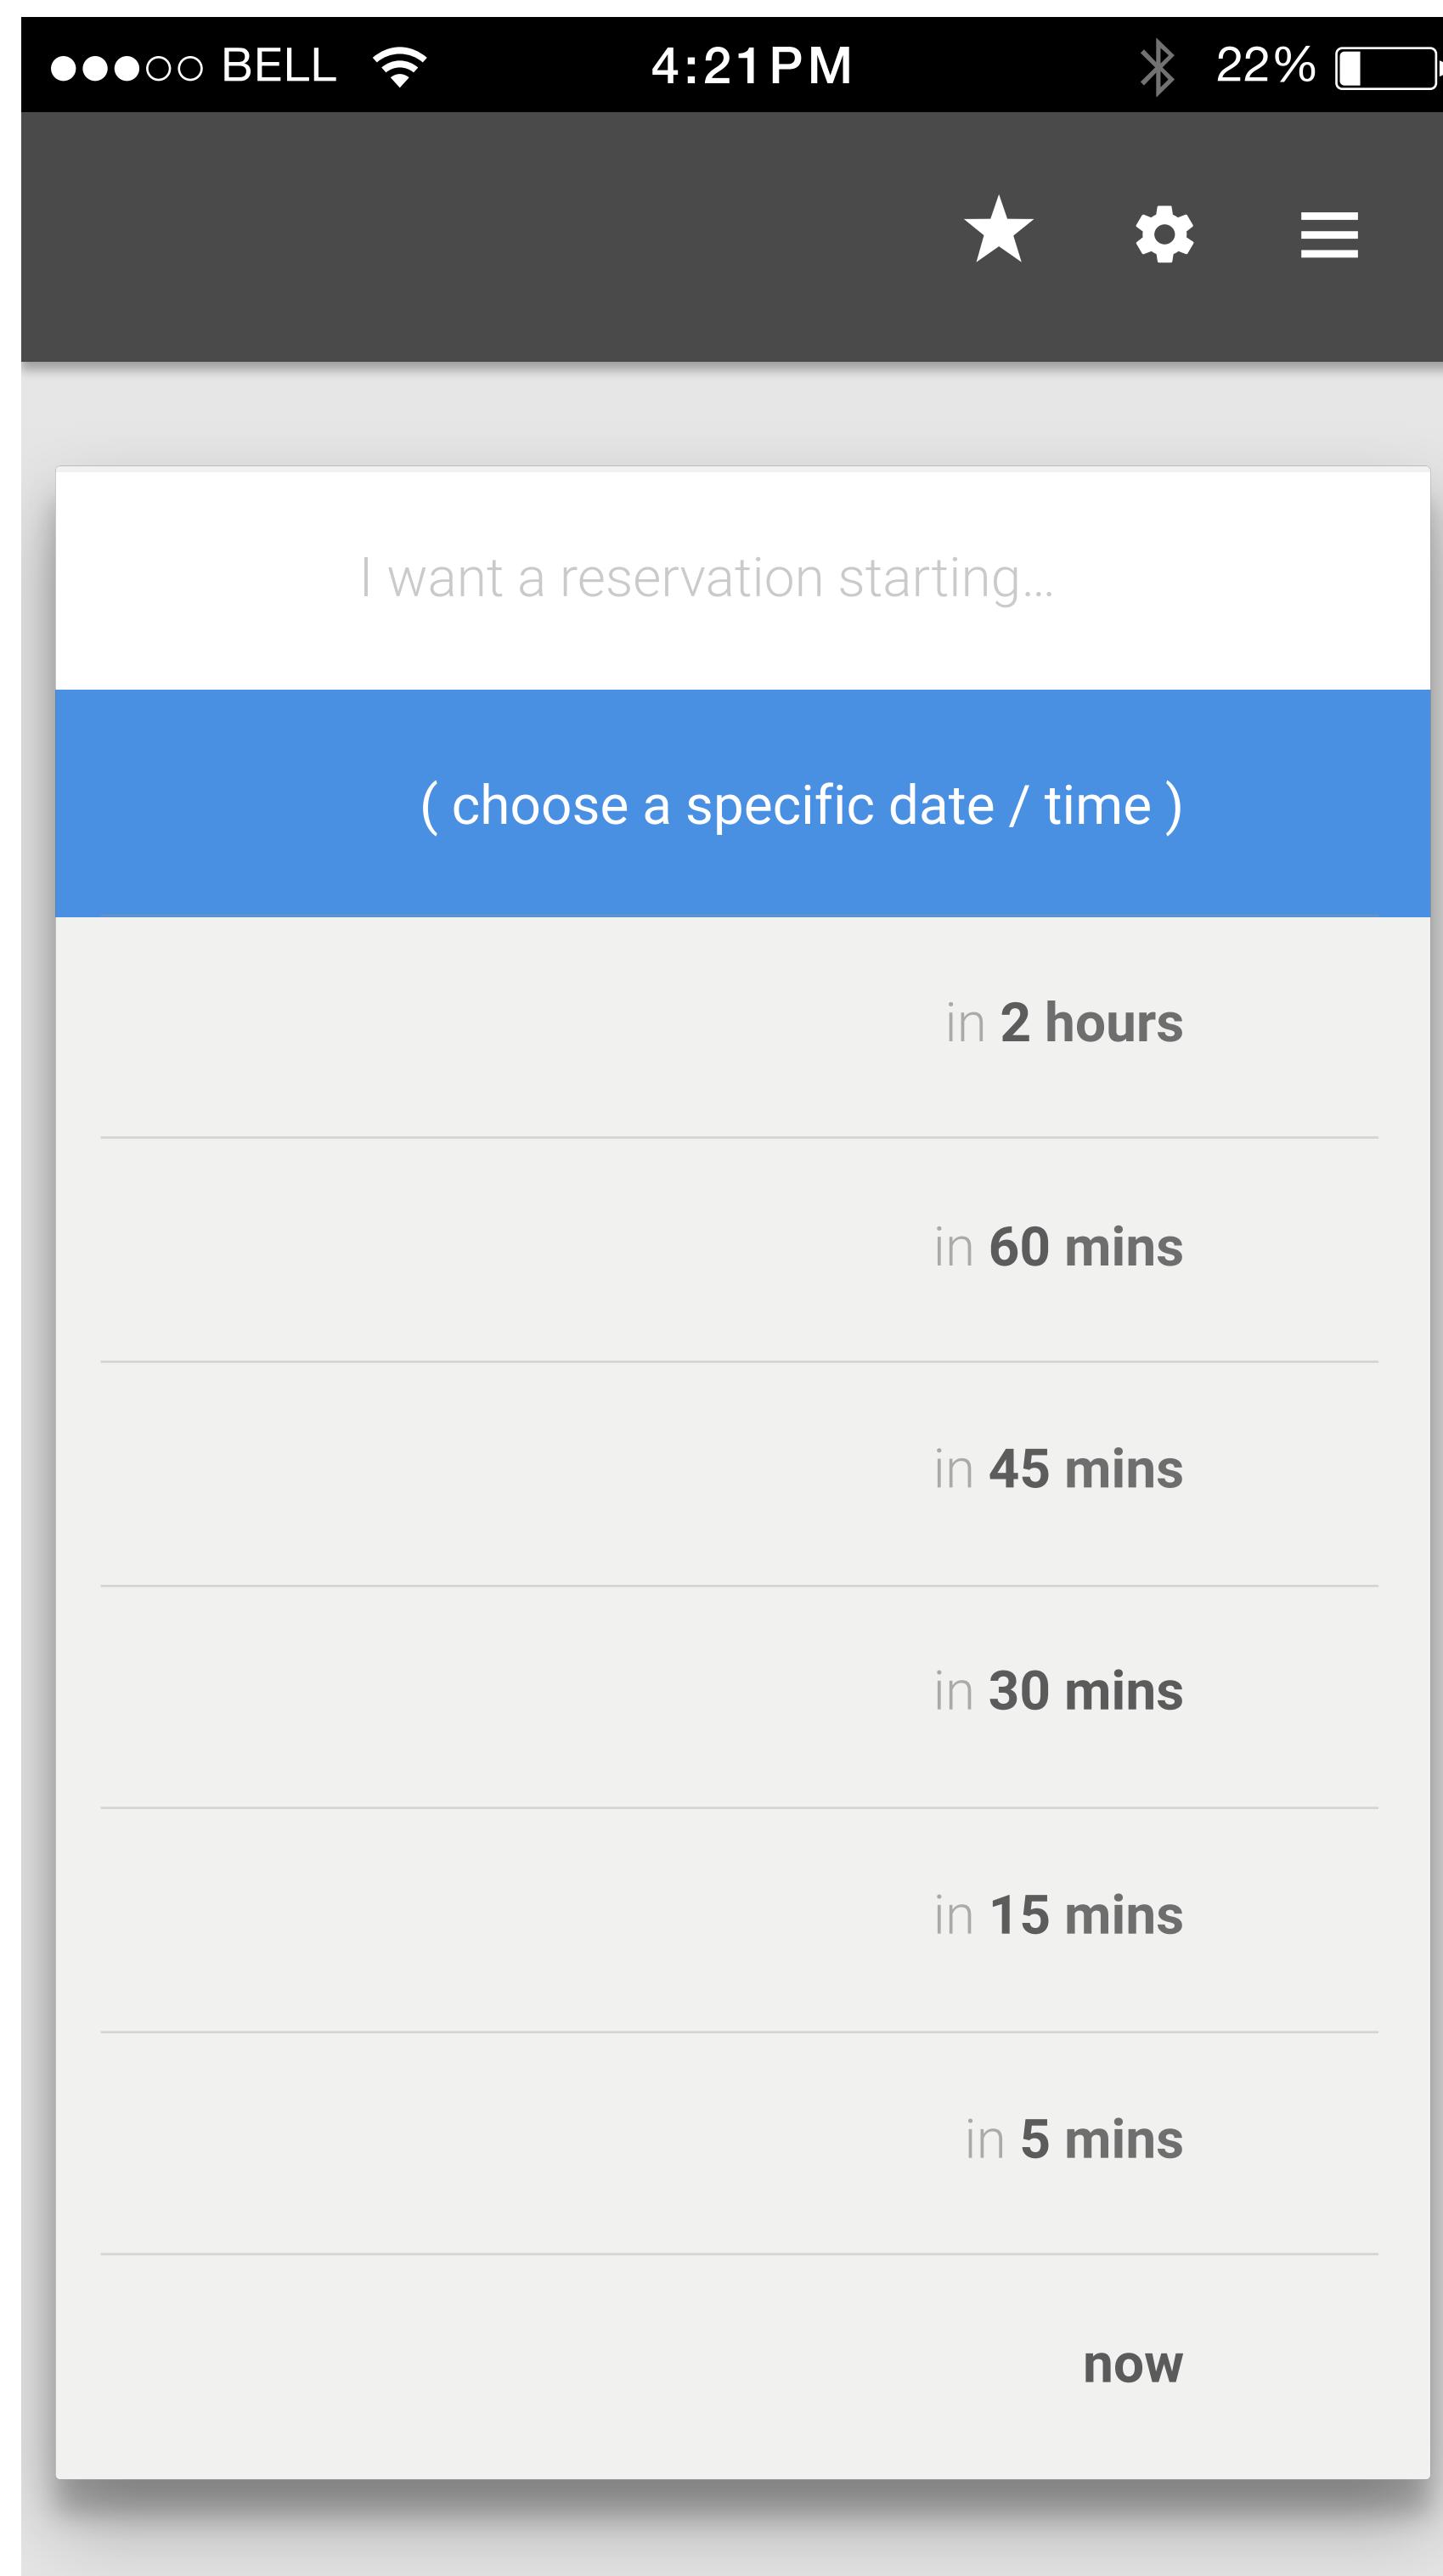

Image gallery for identification purposes.

Favouriting a space. In your favourites you can edit/ rename spaces to be more easily recognisable and also choose to add them to your home screen.

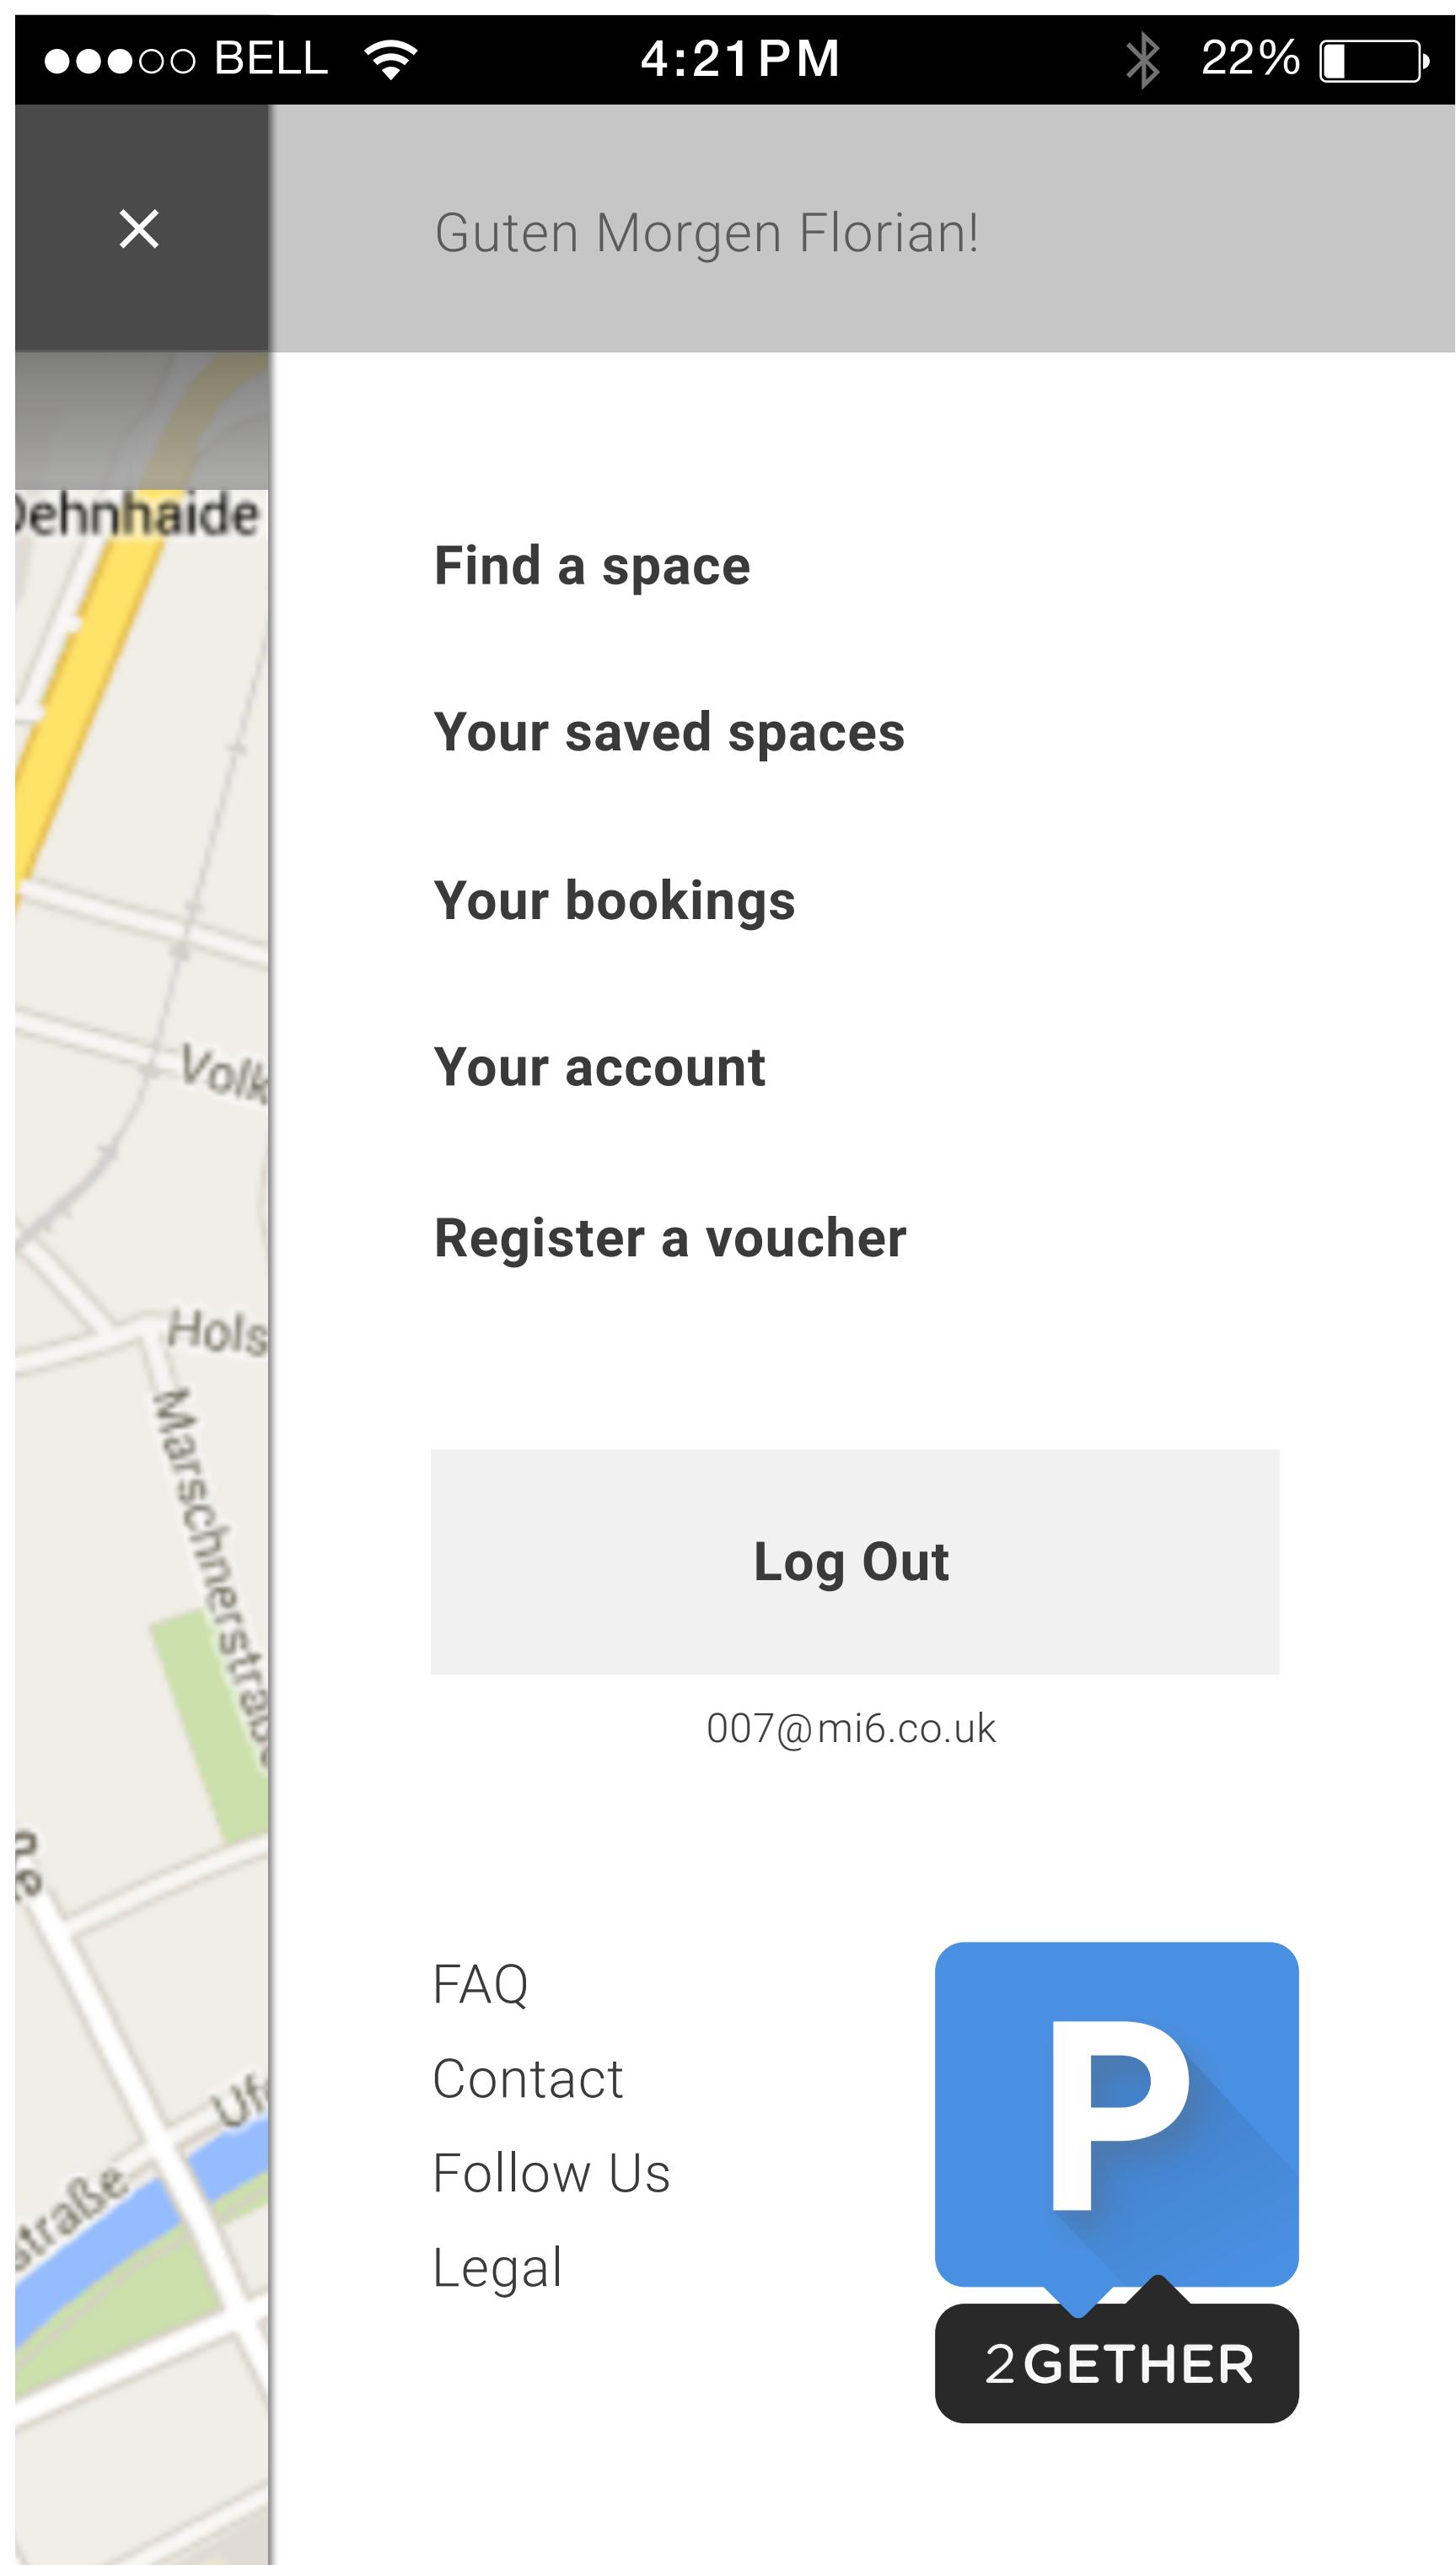

Space actions and further information access

From the homepage or in screen time selector, the first option is to be able to select a different 'relative time' by a simple thumb drag gesture.

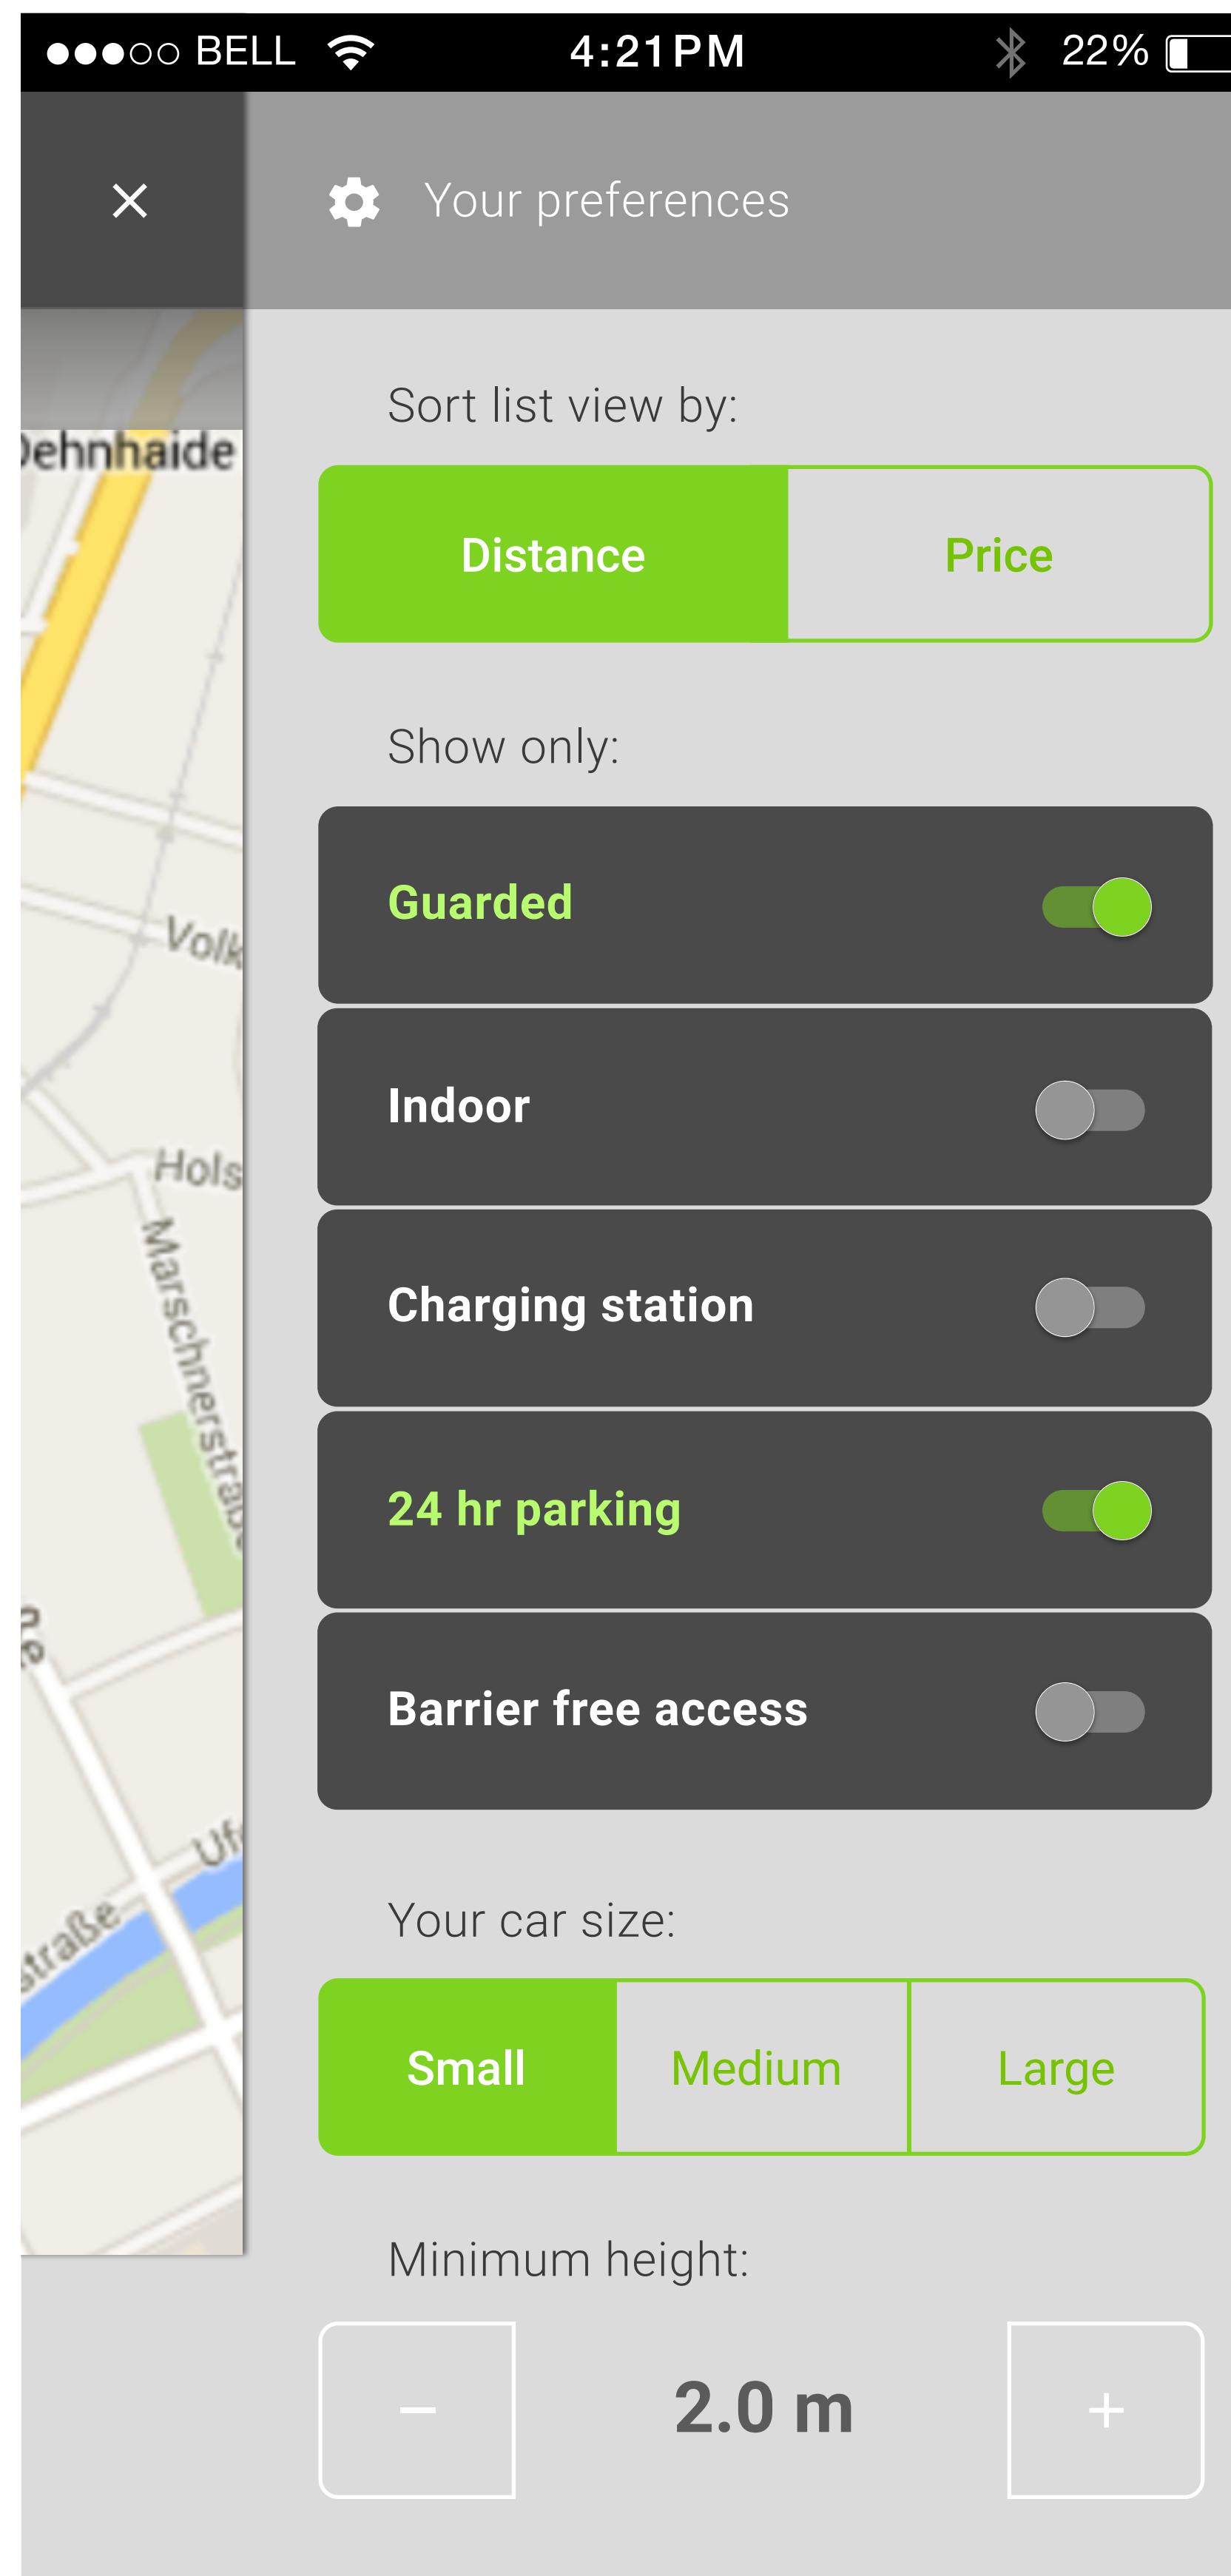

If something more specific is required then a distinct time and date can be set via gesture based interface (taken from Google Material design functionality).

Time / date selection options

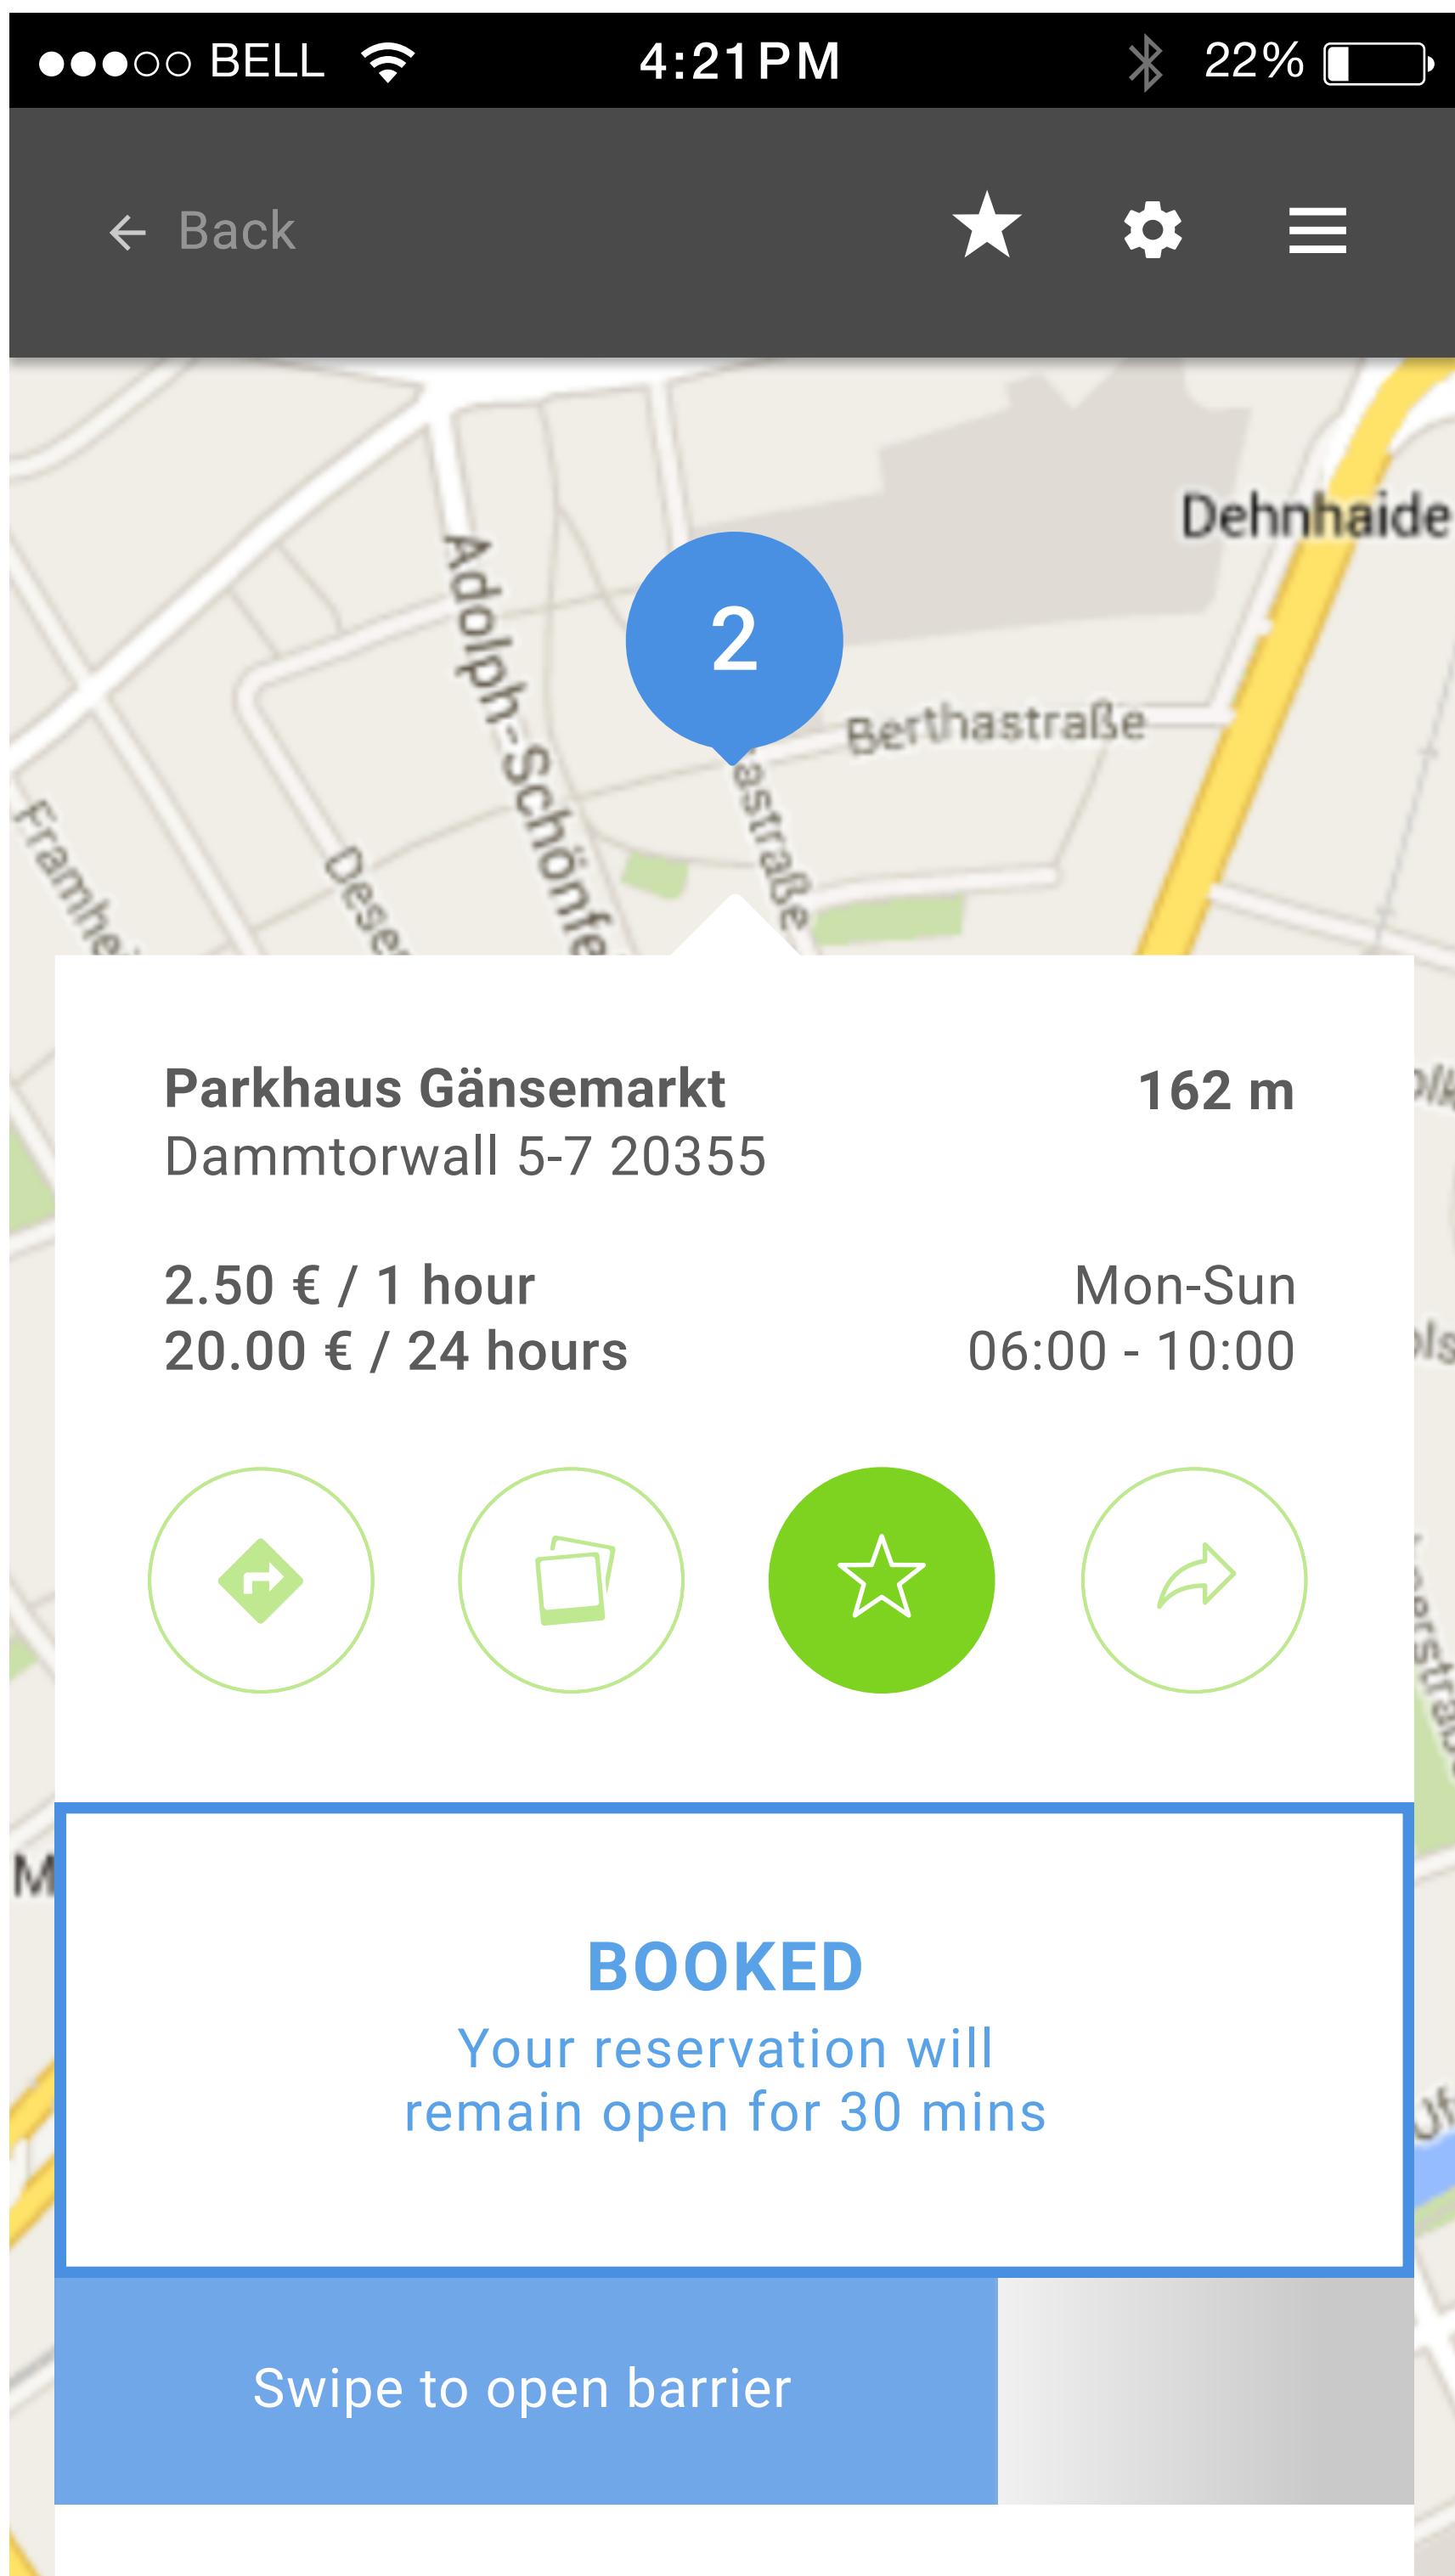

Main menu in full. Now including saved spaces.

Main menu options

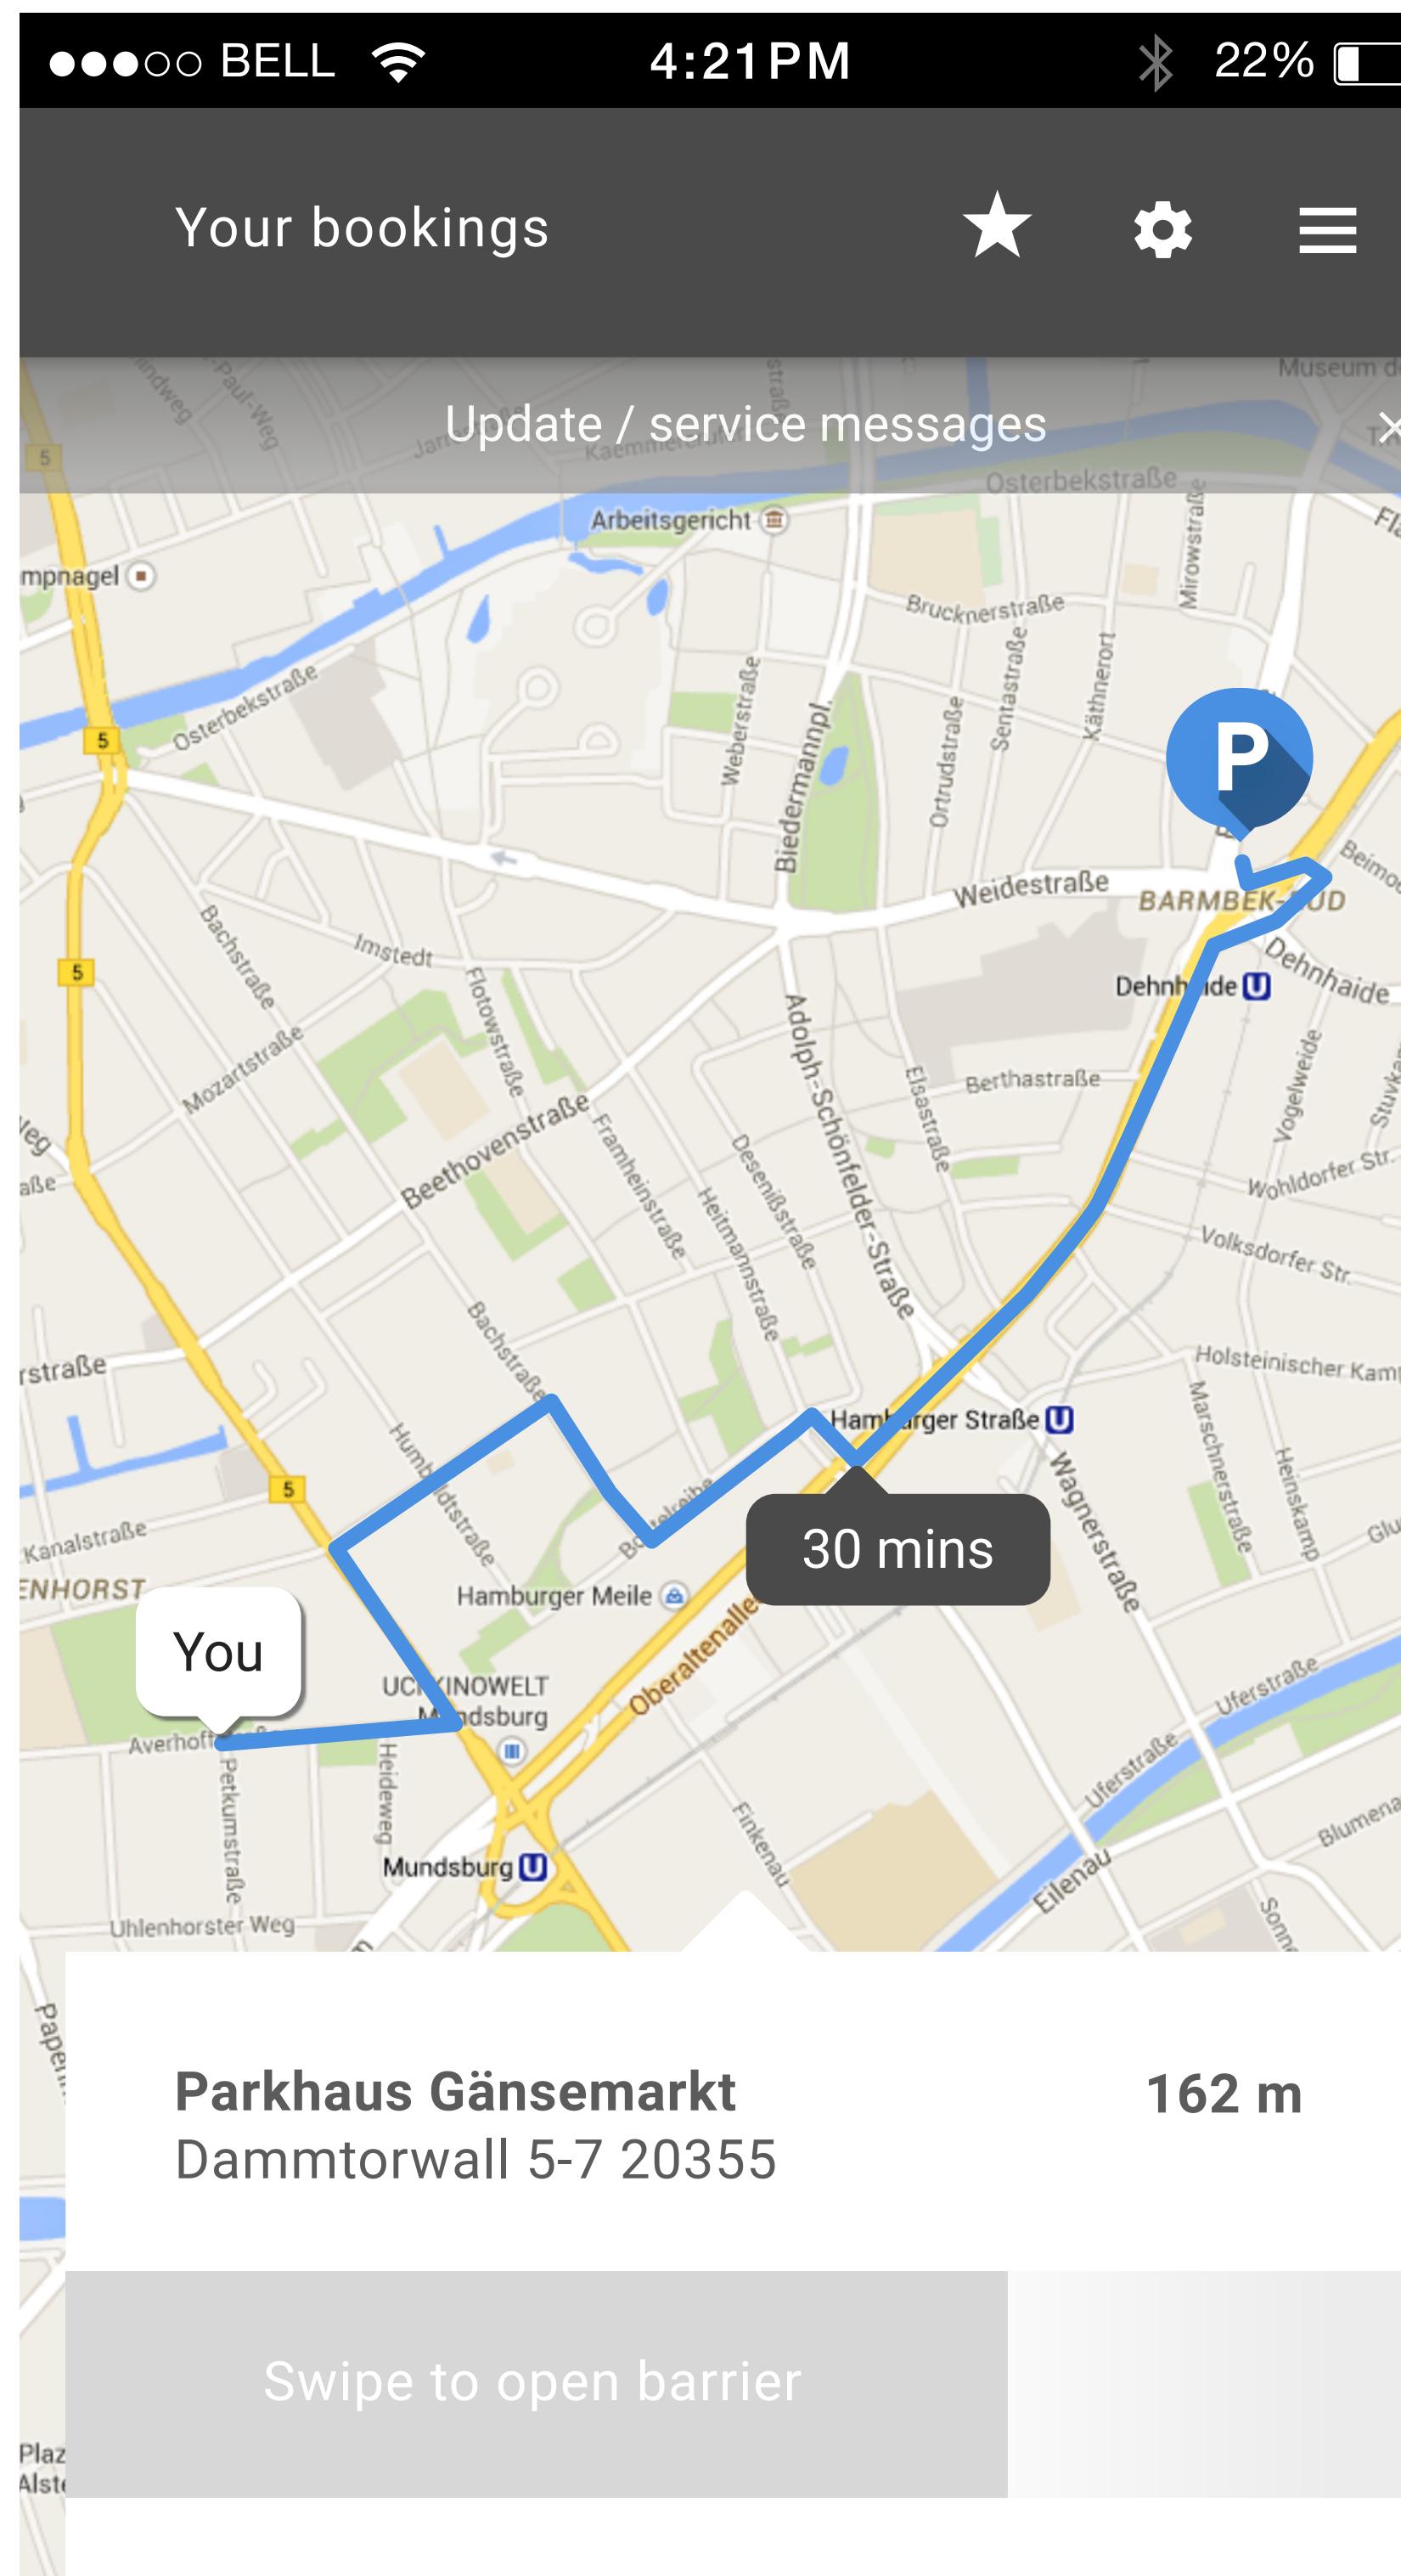

Preferences always accessible from menu bar.
Simple toggles allow search returns to be tailored
to your needs for speed of booking.

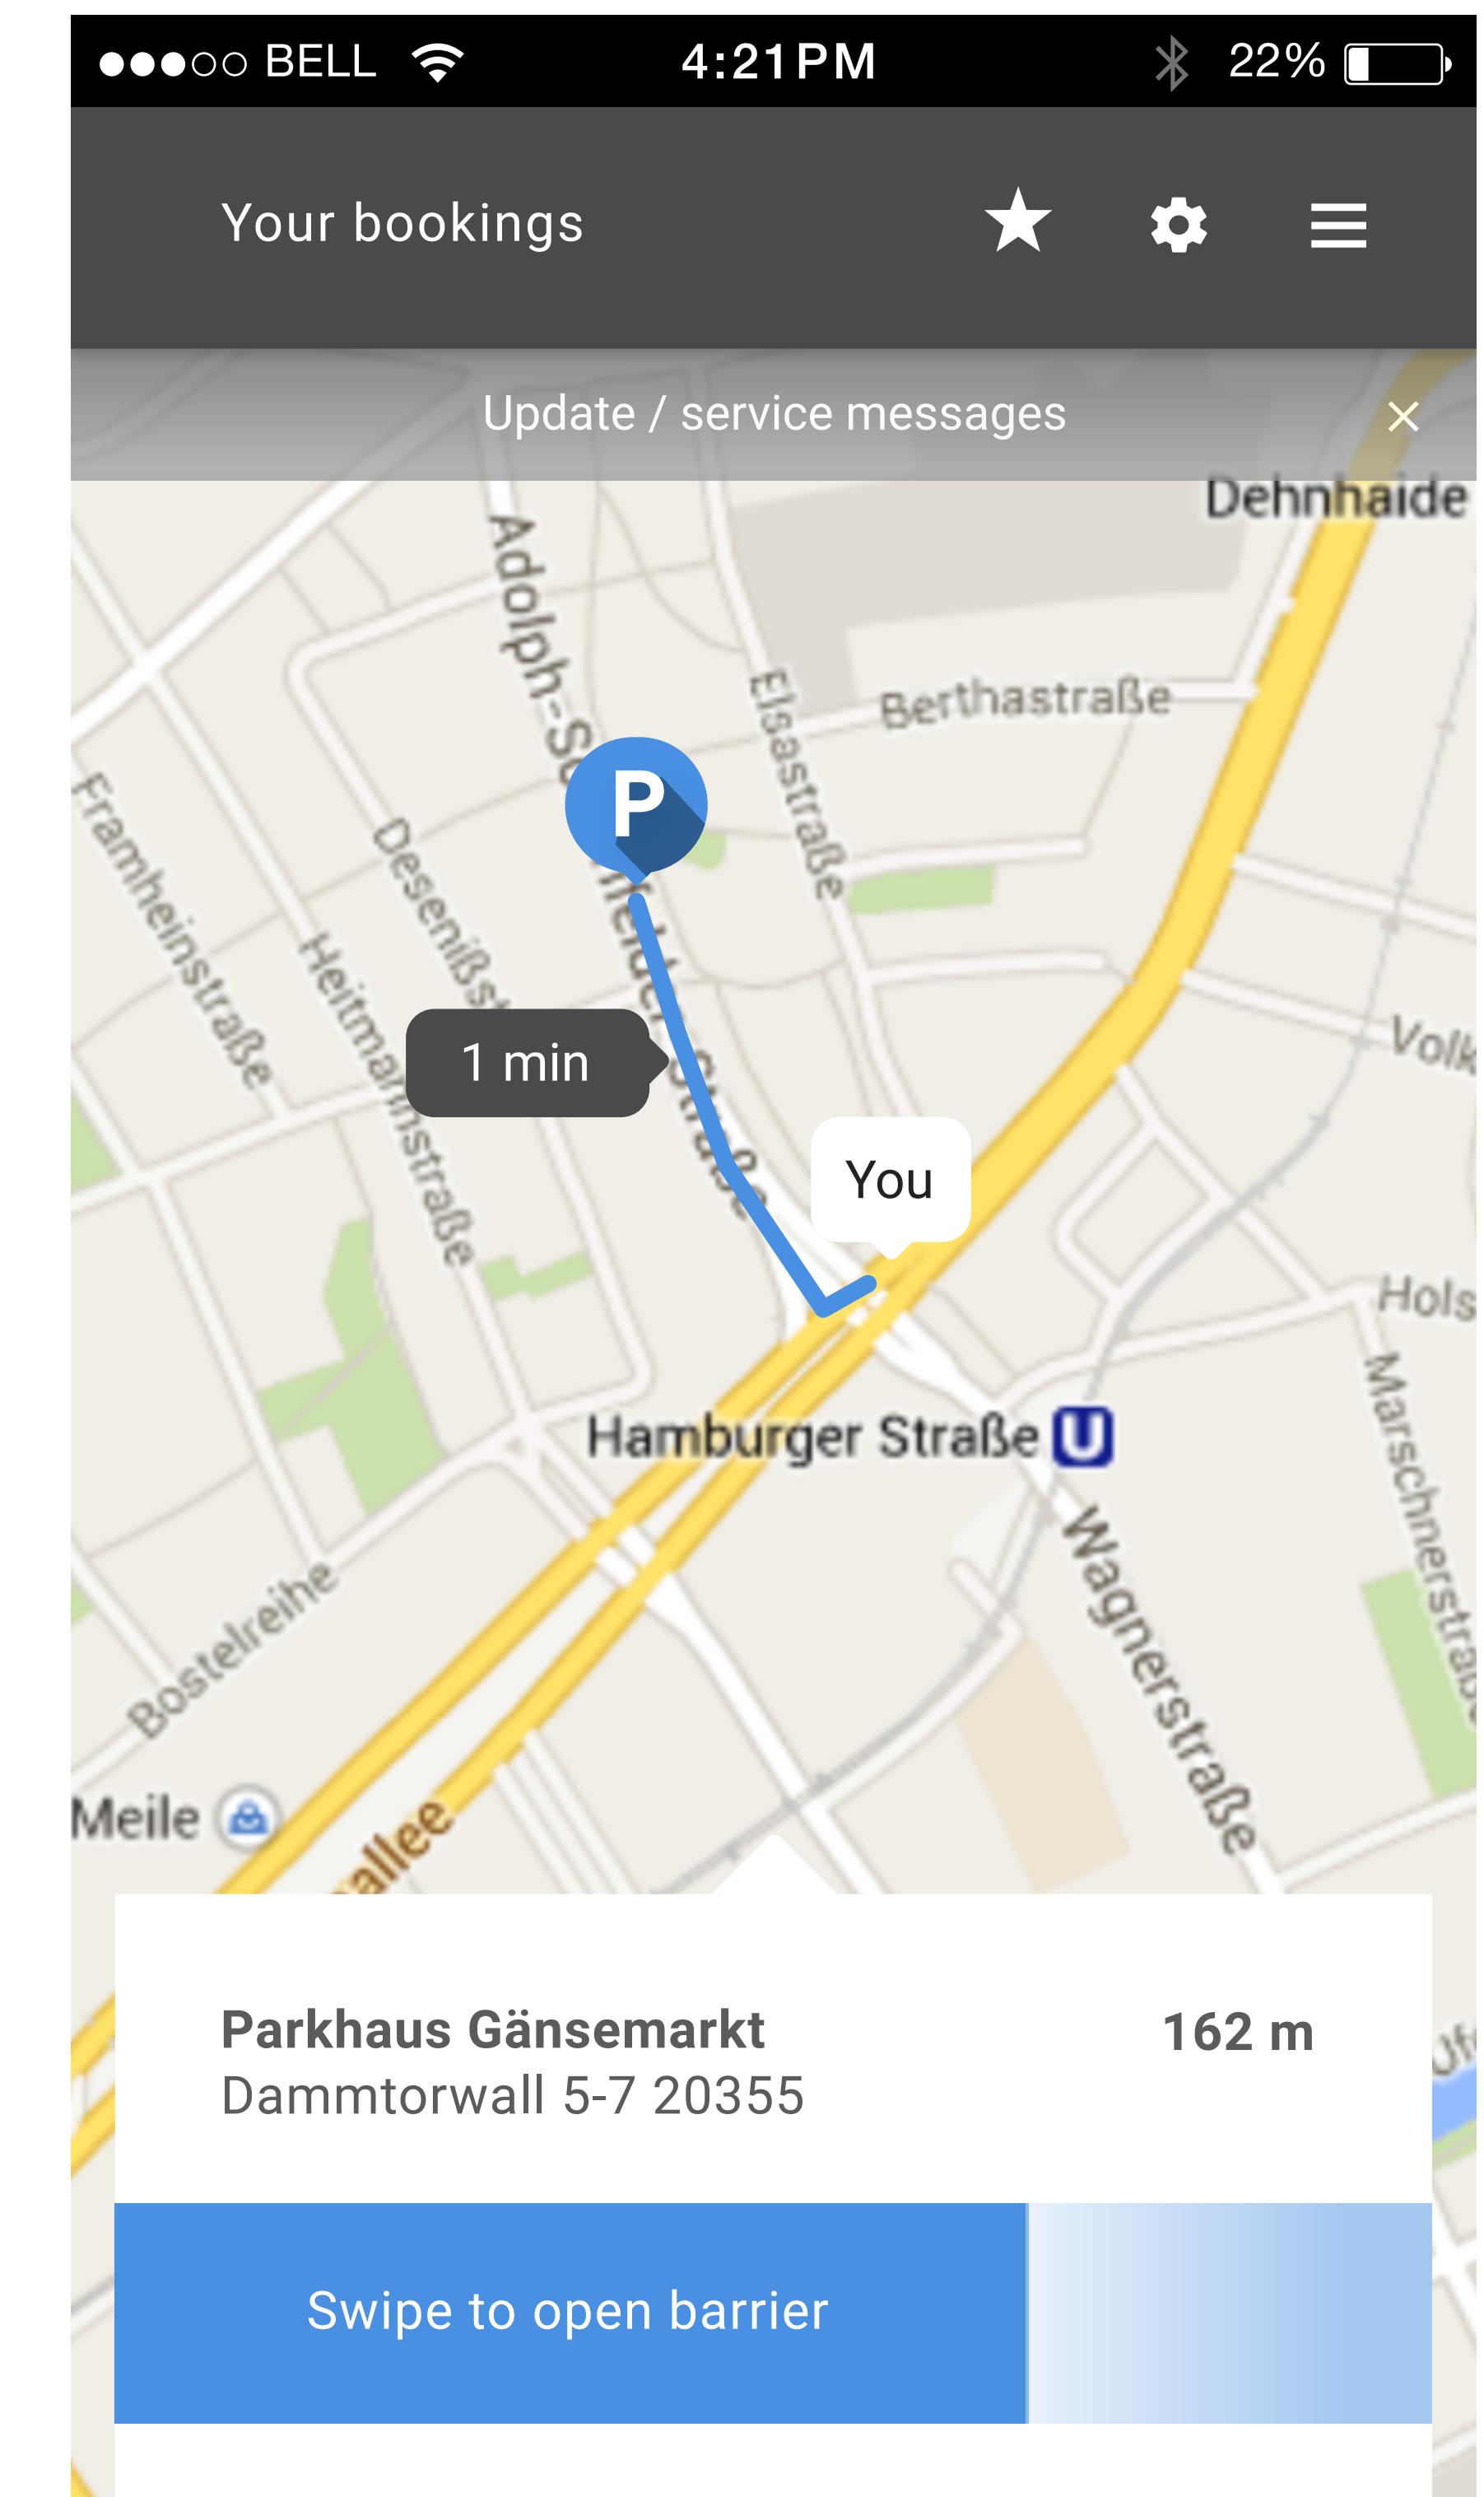

When booking is made, buttons change to show next relevant steps in parking.

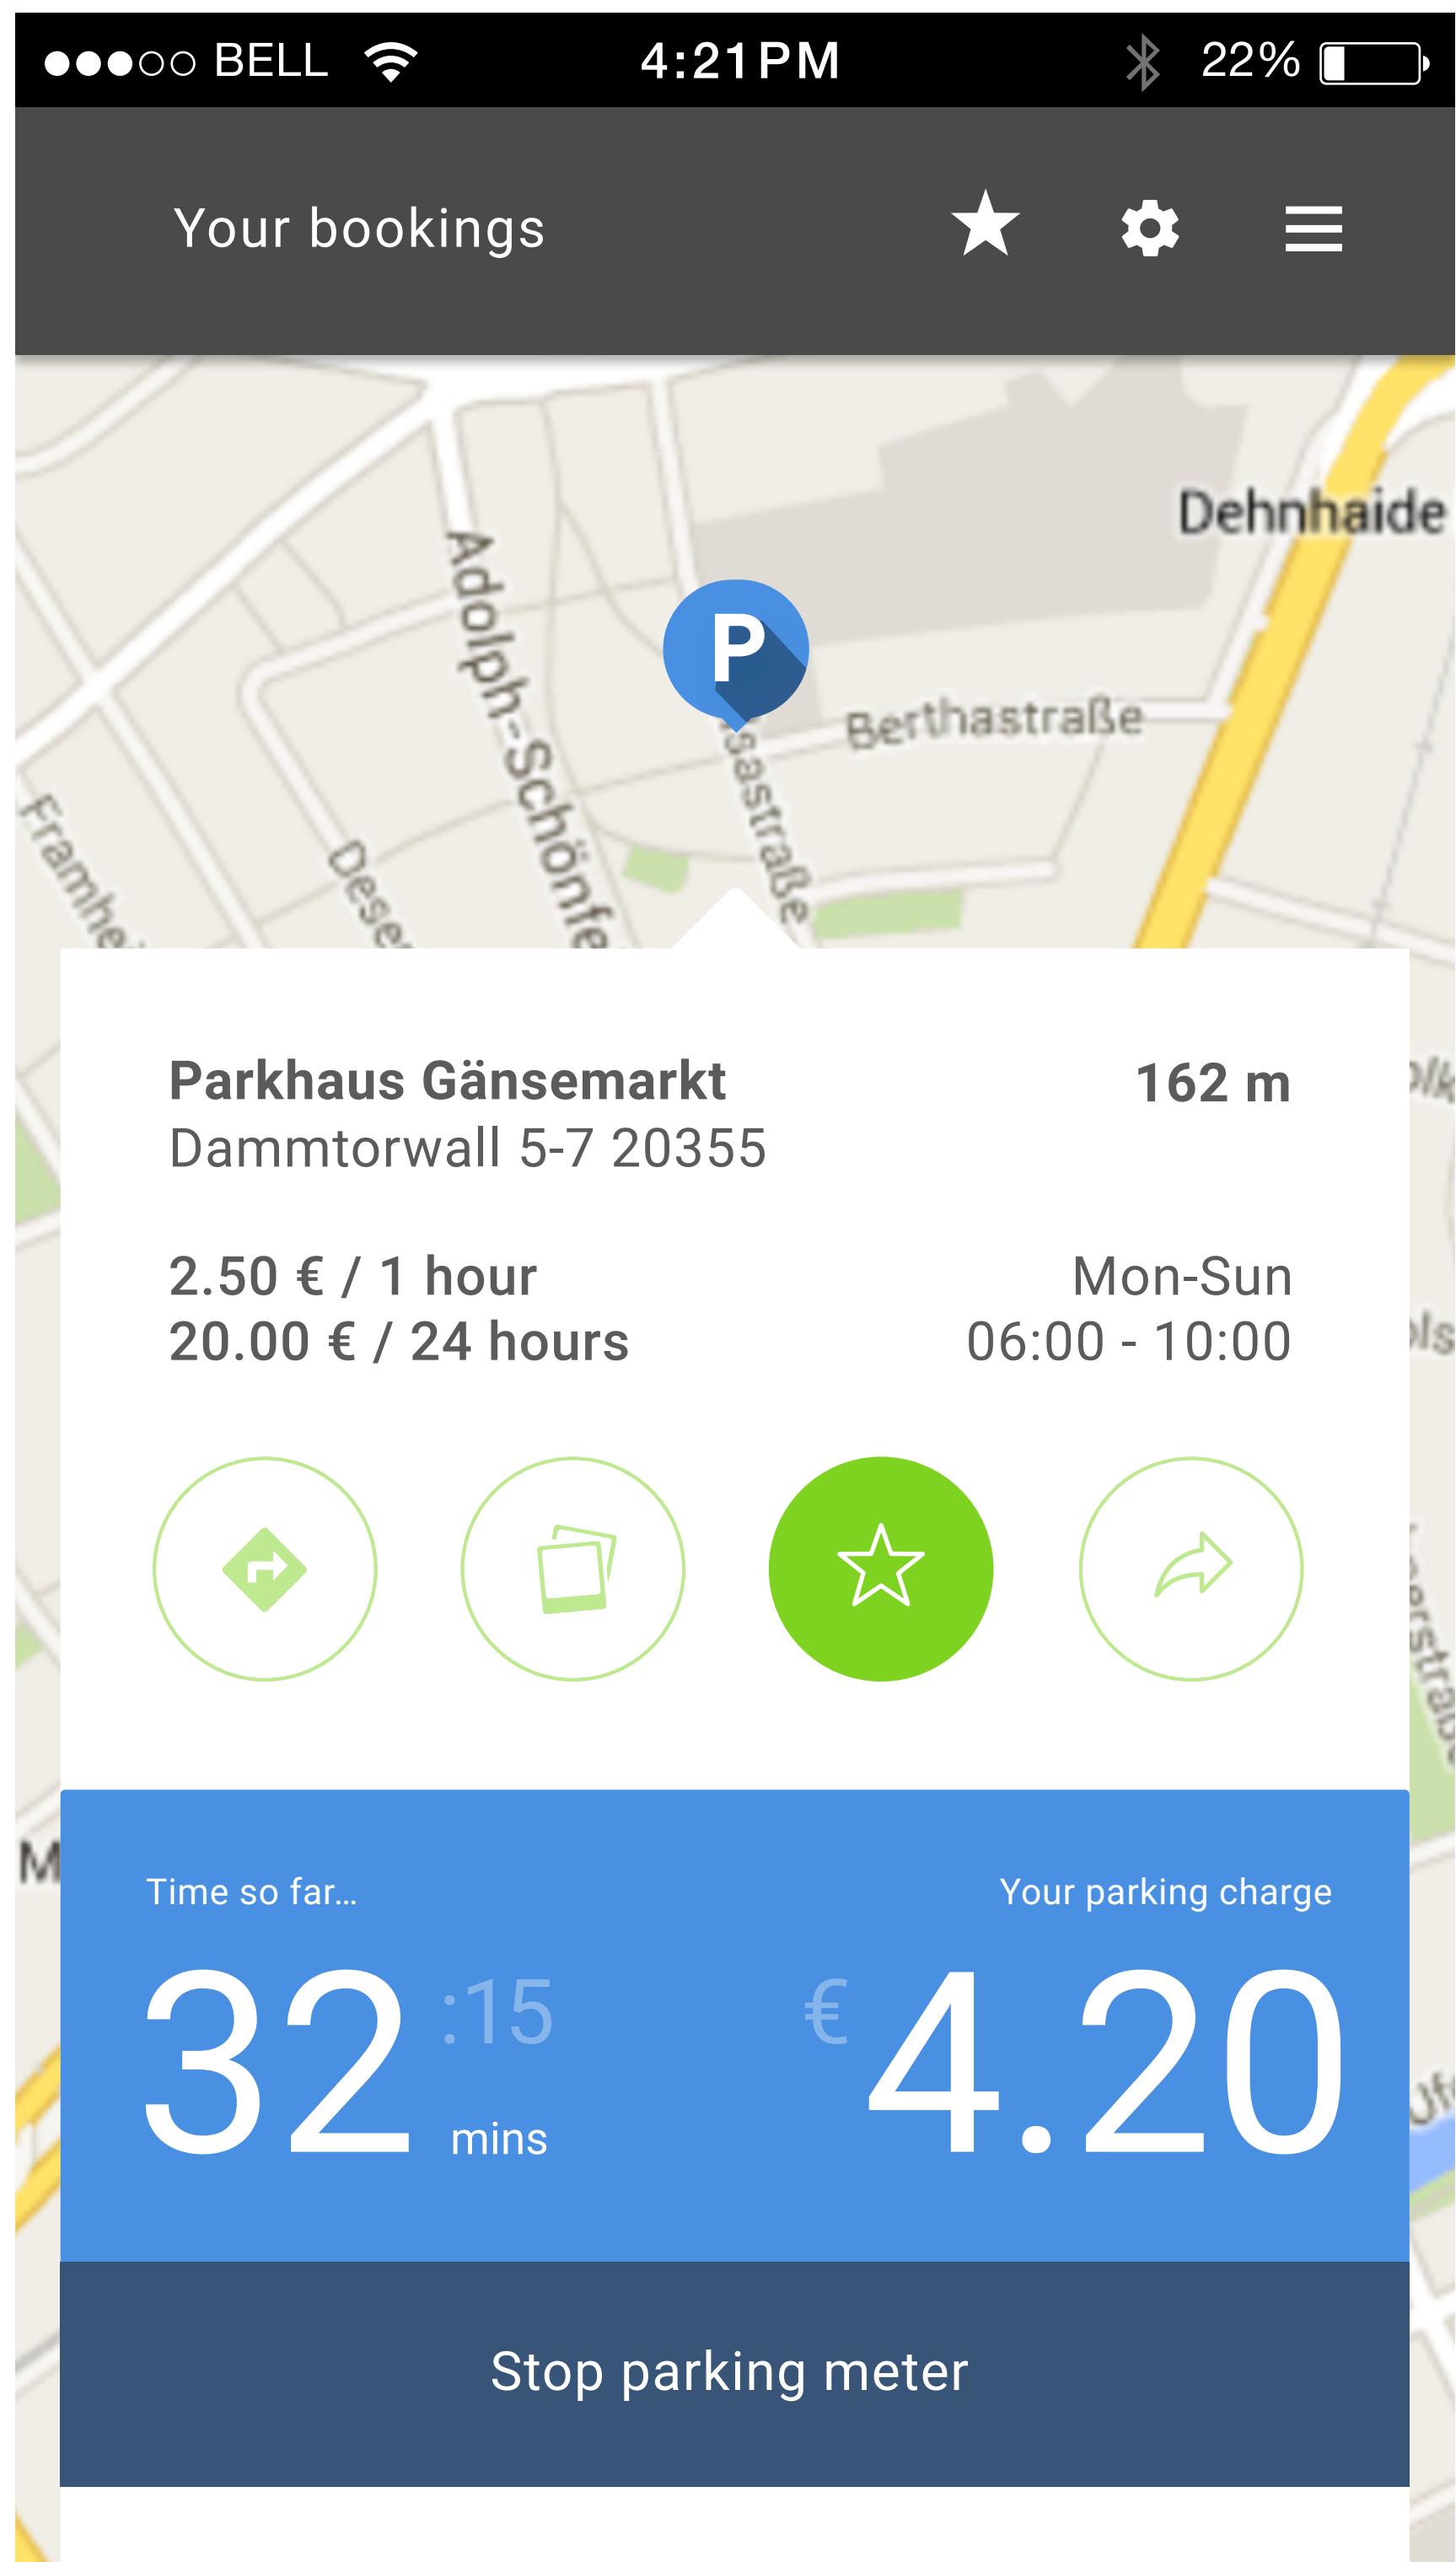

Booking and parking meter

If booking is made for NOW, then reservation starts immediately and view automatically proceeds to routing information, with barrier open/start parking access given in condensed info panel.

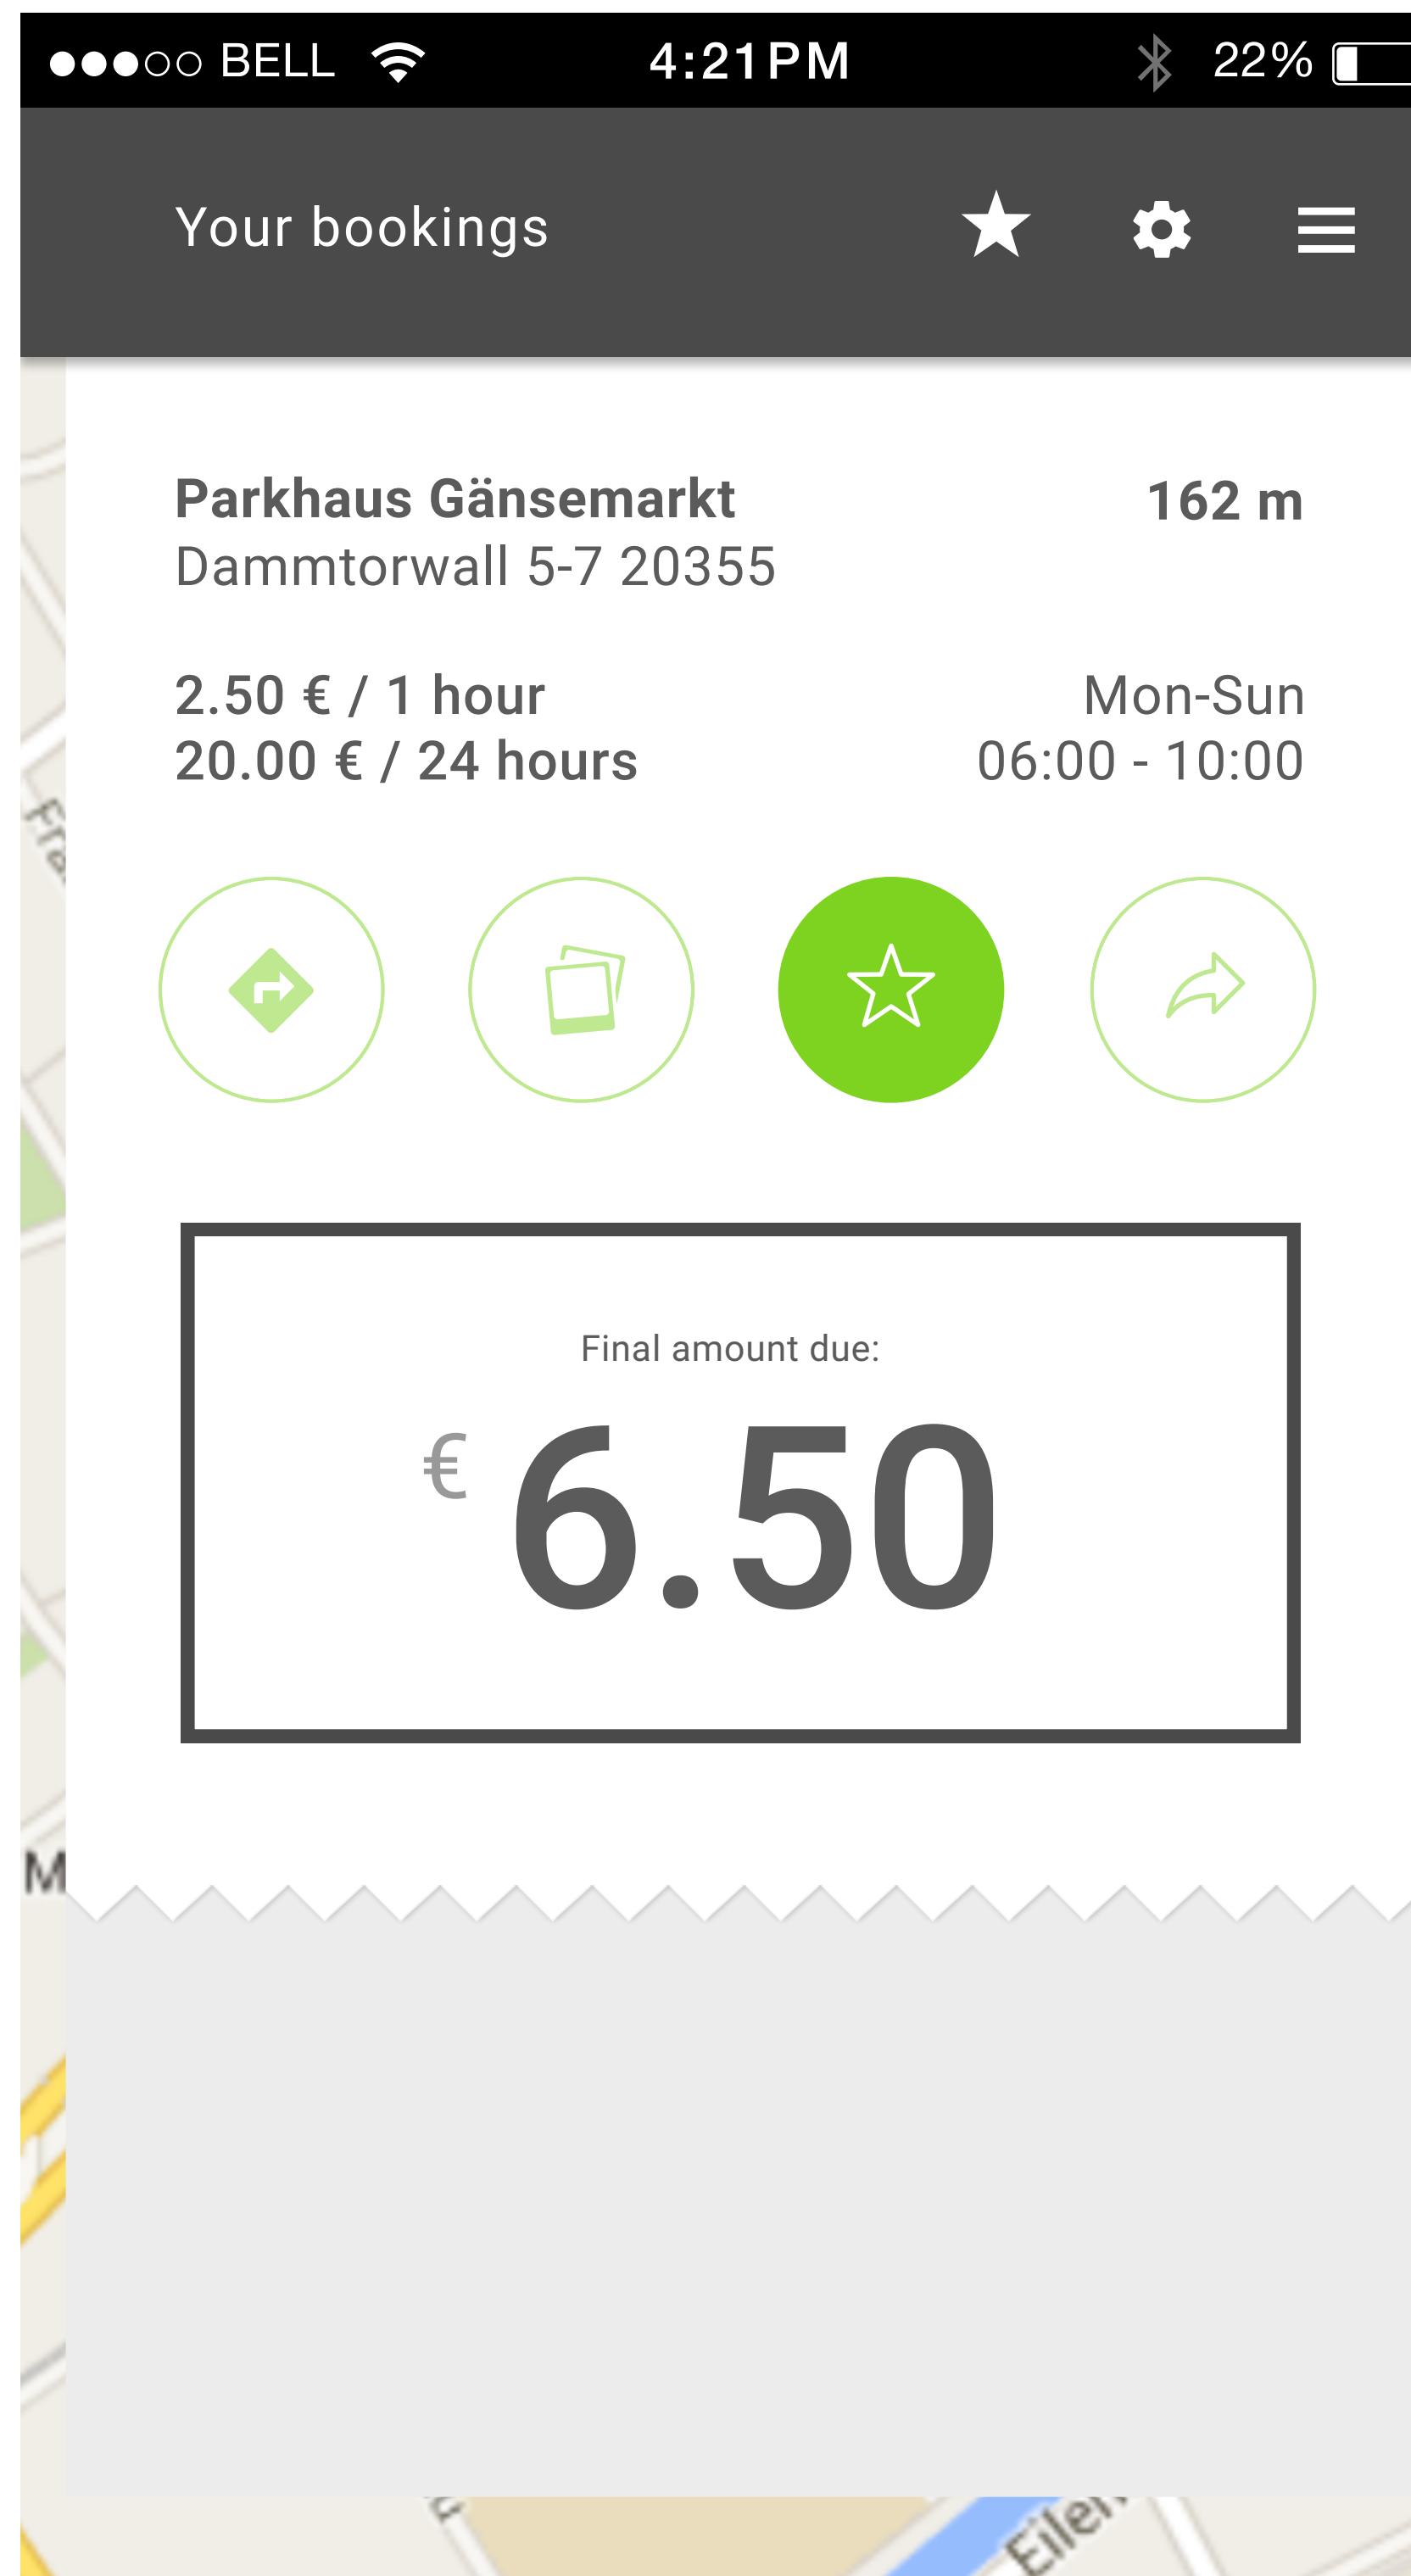

When location of user is identified as at the parking space, then parking start is made active.

Once parking is started, booking message area becomes a running meter, allowing the user to always know how much their parking will end up costing. Other actions are still available.

Parking meter and payment

Once parking meter has been stopped, panel becomes a receipt view, with then confirmation of payment method (or addition of another card) made available.
